Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 3

Received: 11/20/2009 3:55:35 AM

The military build-up is predicated on past illegal behavior made by U.S. Marines in Okinawa, which over time, put a strain on our country's bilateral relationship with Japan. This will result in two major waves of folks planning to descend into Guam over a 60 to 100 month period over a truncated frame of time by a factor of four.

**I-002-001**

While I love our nation and the military, the size, scope and speed that this build-up will have will bring many problems to Guam. Increased production of sewage, solid waste, waste water, use of very scarce land, noise pollution, 25% population increase, waste generated from military operations, training, housing and overall presence, distribution and management of scarce water resources all point to a solution that is not realistic.

I think that the scale of this move does not parallel Guam's limited natural resource base and is overly intrusive for the local population. And while it will bring jobs and additional revenue to Guam, too many issues remain unresolved between the military and fellow Americans from Guam as it stands now.

**I-002-002**

Compact impact, basic political rights to vote for president, lack of a full voting member in Congress point to several opportunities to seek parity and balance. That is not the case now.

**I-002-003**

My biggest worry continues to be what GAO said-that the DoD is not engaging and viewing Guam as a full partner and is not communicating its intentions in a timely and comprehensive manner. This EIS document should have been given substantially more transparency over the past several years. Secrecy points to arrogance and it implies that there is something to hide.

The military could do a much better job of communications, planning and showing more respect to their fellow American citizens on Guam. What I sense in this particular instance is a arrogance that somehow folks on Guam will simply bow down and say "yes sir." This is not American.

**I-002-004**

The water resources, both fresh water availability and protecting beach areas, which are already polluted will see more destruction.

Guam most importantly needs substantially more resources to build up its infrastructure, water, power, waste disposal while preventing the island from becoming further contaminated.

My hope is that IGPO becomes more transparent and also realizes that on the one hand, this buildup is supposed to protect our national interests via the military, yet on the other hand, our military is behaving in some ways like a foreign invader

**I-002-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-002-002**

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

**I-002-003**

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other

community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

**I-002-004**

Thank you for your comment. DoD recognizes that the basic infrastructure of power, water, wastewater, and solid waste need to be carefully managed. That is why DoD is working with Guam utilities in solving the supply issues that would be created by this buildup. For all utilities, Guam organizations are in concurrence with the proposed preferred alternatives. DoD proposes to pay its fair share for infrastructure upgrades, as well as being an advocate for grants and low-cost loans for the Guam utilities to be able to correct current system deficiencies.

I-003-001

There must be a better alternative to the "major haul road" designation that is now "from rt1, to rt8, to rt16 to Marine Corps Drive(rt1). Traffic today on these roads are heavy, noisy, congested and major contributor to air pollutants. A better alternative is to construct a new road system along Guam's east side, connecting Guam's south to her north, with entry, exit options every so many miles to allow traffic into existing villages.

#### I-003-001

Thank you for your comment. The alternative that you mention was a proposal that had been included in previous planning documents and was conceptually evaluated in the development of the 2030 Guam Transportation Plan. This route would primarily serve as a transportation corridor that would connect Navy facilities near Apra Harbor with Andersen Air Force Base. It was envisioned to be used only by the military, would be very impactful to the environment and would be very costly to construct. In order to benefit Guam's roadway network and make better use of limited funds, DoD and the Federal Highway Administration (FHWA) plan to improve existing routes instead.

To Whom it may concern,

I am the homeowner to 211A Bamba Road Pagat Mangilao, Guam and currently reside in San Diego, California. It concerns me that I rely on PDN, KUAM and Pacific News Center for all my information. News reporting can be bias and I want a reliable source! The concerns I have are the following;

- 1.The search criteria within the document did not assist me of my search for Route 15, Pagat Point or Pagat.
- 2.My house is located a short distance from Route 15 and I am on the assumption that the road will be widen. How much of private property will be needed on the north and south end of Route 15? Will purchases be made by the US govt or GovGuam? Will eminent domain be executed to acquire the property?
- 3.Will Bamba Road be a part of the proposed military training grounds? I cannot tell from the listed maps if my property is affected.
4. Will a medium be available for off island Guam citizens like myself?

Allow me to thank you in advance for taking the time to review and acknowledge my concerns.

Respectfully,  
Rita Fe Bamba  
649 Concepcion Avenue  
Spring valley, CA 91977  
Home 619.303.2377  
Cellular 619.820.9741

I-005-001

I-005-002

#### I-005-001

Thank you for your comment. Document search can be done within each electronic version of the document. The "Find" function within the Edit menu of Acrobat Reader (or by pressing "Ctrl+F" button) will allow search for specific terms within each volume. Discussion regarding impacts to Route 15, Pagat, and Pagat Point can be found in Volume 2 of the DEIS. The DEIS is available on the website at: [www.guambuildupeis.us](http://www.guambuildupeis.us).

#### I-005-002

Thank you for your comment. The Draft EIS identifies two alternatives for the military firing ranges. The preferred alternative is A (also referred to as Option A or 1); in this alternative, Route 15 would be realigned and a portion of Route 15 would go through Andersen South with a fence constructed on either side of the road. Alternative B (also referred to as Option B or 2) would not require the realignment of Route 15. Volume 2, subsection 2.3.2.5 of the DEIS discusses the proposed firing ranges; Figure 2.3-14 (page 2-63 of Volume 2) shows these alternatives in map form. Presently, these are under consideration and the boundaries may be refined (so we cannot state if your property of Bamba Road are impacted).

DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value,

procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-006-001

I am outraged with the location and boundaries of proposed developments. As an owner of private property located within the boundaries of Andersen Air Force Base I understand the restrictions that will develop if more coastal land is awarded to the Department of Defense. We all want to live on coastal, beach front property; however it is unnecessary to restrict access to these areas to accommodate military personnel and their dependents.

Beach access to the public must be protected - you have taken too much with existing bases.

**I-006-001**

Thank you for your comment. For privately owned lands at Andersen AFB, no new public access restrictions would be created.

Volume Seven Table ES-4, Summary of Significant Impacts of the Preferred Alternatives lists ten significant areas of impact by my count. This table should be the lead in any discussion related to the impact of the military buildup.

How can this military buildup proceed without political legitimacy? The United Nations treaty related to political status of all the territories in the world after has been ignored by the U.S. How can the U.S. inflict the most significant impact on this island since the Japanese invasion without first allowing the Chamorro people the right to choose independence, free association or statehood? If the military buildup is not grounded in political legitimacy this buildup will end in a bloody failure.

Look at social unrest caused by a thirty percent rise of fees at California colleges has caused. Do you believe that the locals will simply absorb the costs of this buildup? Pay for the cost of destroying the reefs inside and outside of Apra Harbor. Will projected water shortages in the civilian community become a public health issue? How will the economy (who will) benefit while the majority of local citizens be priced out of the housing market? You better get this right if you want to avoid a military, political, regional, social and Constitutional disaster. Its your Constitution by the way. It doesn't apply to us. Shame on you. You better get this right.

#### I-009-001

Thank you for your comment. Website Comment Number: 11

Received: 11/22/2009 3:32:43 PM

I-010-001

Will anyone of you all explain the law(s) of Guam (local) and United States (Federal) and US Military exemption(s) if any pertaining to "Noise Pollution, Noise Control, and Land Boundary Setback(s)" relating to the operation(s) of a firing range in the proposed capacity for the military buildup at Pagat Point?

I-010-002

I am a concerned homeowner/landlord of 211A Bamba Road Pagat Mangilao, Guam that currently resides in San Diego, California. In the pass I had to address the foul smell of a Piggery that Government of Guam permitted without input from surrounding residence of which was allowed to operate under "Inhuman conditions" adjacent to my home and the Mangilao Golf Course. As a family we took tremendous measures to change the companies waste and noise management process via local and federal agencies and suffered the consequences of our proactive approach as well. Let it be known I am in full support of the military buildup but I do not want to have to deal with a "Nuisance" issue latter down the road just to find out that it's an uphill battle because GovGuam failed to place appropriate standards to coexist! The civil and criminal penalties should be addressed now.

cc: Felix Camacho , Governor of Guam

#### I-010-001

Thank you for your comment. Numerous laws exist relative to noise pollution and control, but none relate land boundary setbacks relative to firing ranges. Through the Range Installation Compatible Use Zone program, military installations develop noise levels and work with local planning officials to assure compatible use around an installation. The USMC will continue to work with the Government of Guam and planning officials to address noise issues.

#### I-010-002

Thank you for your comment. The proposed action would be implemented in accordance with all applicable regulations described in Volume 8 of the EIS.

Received: 11/24/2009 5:25:13 PM

I-011-001

Is it not enough to have a history of our soldiers, our hands, our feet and our ideals moving into and taking over Native American lands, Japan, Korea, Vietnam, Iraq, Afghanistan, Pakistan, Somoa and Cambodia? We are told it is to help, to protect and for a cause; but at what cost? Voices are being silenced, traditions suffocated and native peoples are dying in innocence for ideals they have no intention of adopting and "help" they had no part in asking for. Please, do not let this tradition of "America the Great" take over Guam and add it to the list of countries whose culture has moved into the shadow of the US. Please, allow Guam to maintain it's culture, beauty and agriculture by moving these troops back into the US if they need to go somewhere. Don't move them into another country under the guise of "re-location". Be known for something more than invasion, be known for something more.

#### I-011-001

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

This comment relates to Volume 4, Chapter 9-The impact on recreation of the construction and operation of a nuclear carrier berth

I-013-001

Are you crazy? Siting the the berth on Polaris Point at the "preferred location" would, for all practical purposes, destroy Polaris Point Beach--one of the nicest beaches on Guam. Chapter 9 describes Polaris Point beach as merely to the west of the proposed location--in fact, this gigantic wharf would tower over, if not overshadow Polaris Point beach.

Moreover, the cove which is "preferred location" of the berth happens to be the "turning basin" of windsurfers sailing their runs on the Northeast winds prevailing during sailing season from Family Beach across Apra Harbor. The security barriers around the carrier when in port would foreclose this activity. Strange that no mention was made of windsurfing in this report, when Apra Harbor is one of the premier windsurfing locations in the world.

Siting the carrier berth in the old SRF would avoid these problems. It is already an industrial area. The water there is already the required depth-no dredging required. It would be out of the way of windsurfers. And a pristine cove and beach would be preserved. Joe Guthrie

### I-013-001

Thank you for your comment. The DoD acknowledges that there would be some impacts associated with locating the proposed wharf at Polaris Point, which is the preferred wharf location. Impacts resulting from dredging activities (occurring both at Polaris Point and the former Ship Repair Facility (SRF) site, as well as the proposed channel path), the minimum buffer distance from aircraft carriers, and wharf construction, would be experienced at either site. Please note that the former SRF site has constraints of its own, including the likelihood of disrupting shipyard work when aircraft carriers are docked at the wharf. It is not mentioned in your comment where windsurf boards would be launched for windsurfing activities. Nevertheless, probable impacts during wharf construction and dredging (wharf and channel path) activities would be temporary. Depending on launch locations, the minimum 450 feet buffer (delineated with floating security barriers) may constrain windsurfing activities.

I-014-001

Since the release of the EIS last Saturday I have when I find time been reading the pdf version of the documents online. I just got through most of the Executive Summary and I still find it hard to wrap my head around everything. I am a student and I am used to heavy reading loads with weighty language. I feel that the this important document cannot be thoroughly read and understood by the general public of Guam. Let alone with in the 90 days that if given to respond and comment on it. Also the availability of the this document is not widespread enough. Its only made available at 5-6 local libraries and to those who have access to the internet. That is not enough!  
I will be responding more as I hurdle through the expansive 11000 page document with more specific concerns. But off the bat the whole public information and outreach approach thus far needs to be reevaluated. These changes with the build-up will affect every single person living on Guam and the generations who will it inherit the island. More time and more clarity is needed to gauge real public opinions. In addition the process of collecting input needs to be sensitive to the cultural means of communication which do not include town hall meetings in three villages or online commenting.

#### I-014-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam

The DEIS was made available on Guam and in CNMI via the Internet, 7 libraries, the DEIS Reading Room in the Agana Shopping Center, 13 Mayors offices, 1 community center, 2 Governors' offices, and in the offices of 5 resource agencies on Guam.

Public meetings were held in 4 villages on Guam, 1 on Tinian and 1 on Saipan. Interpreters were present at the public meetings to assist those commenting in Chamorro or Carolinian. Comments were accepted at public meetings, online and through the mail.

I-016-001

I grew up on a U.S. Navy base (Naval Weapons Center, China Lake, CA) and my husband is a former U.S. Marine. We both care deeply about U.S. policies regarding the territories and people that have "hosted" our military for so long, and I must say that very often the United States government has dealt with the people of these areas in a heavy-handed, arrogant, imperialistic manner. It has come to our attention that the U.S. is planning to strain the resources of the island of Guam by transferring over 8,000 military employees and over 9,000 military dependents from Okinawa and other places to Guam. We believe that this measure will negatively impact the well-being of the indigenous population as well as the ecosystem of the island. Were the people of Guam even consulted????

#### I-016-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. Hafa Adai!

My name is Aguarin Iriarte and I am an 11th grade public school student here on the island of Guam.

I-017-001

The upcoming military build-up and the issues that surround it are very sensitive topics here on island. Personally, I do not support the buildup at all but it seems to me that the U.S' iron-fist will let nothing in its way stop this tragedy from happening. It would be nice if the U.S government didn't keep most residents in the dark in regards to what is really going to happen.

I-017-002

Having more land taken away from our people is absolutely horrendous. I cannot sit back any longer letting something has belong to my people for over 4,500 years be taken away for the sole purpose of military use.

If the U.S government truly cared, then they would respect the land and our people by not taking more land away from our already densely populated est. 230 sq. mile island.

I-017-003

Most residents are thankful for the U.S' presence, and I for one too appreciate all the U.S has done. But, before this buildup can possibly go through, mistakes that have back lashed this island must be corrected before anything else is even considered. War reparations, giving back of lands and the cleaning up of the dumping of hazardous wastes are just a few of the problems that need to be addressed before this build-up goes through.

Thank you for opening up this comment box for us residents who want to let our voices be heard!

Si Yu'us Ma'ase,  
Aguarin Iriarte

I-017-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

I-017-002

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value,

procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-017-003**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

I-018-001

It's time the U.S. military admitted that Guahan (Guam) is still effectively a colony of the federal government and treated as such. The people are denied their rights and the collective will is suppressed or ignored. The planned US military build-up will negatively affect the island, which is already way over-crowded, and cause a long list of environmental and financial problems. The people of Guahan should do all they can to SAY NO to the dirty money from the U.S. military, which has killed so many thousands of people in the last 70 years. SAY NO TO DIRTY MONEY! SAY NO TO MASS KILLING! SAY NO TO IMPERIALISM!  
SAY YES TO SELF-SUFFICIENCY AND SELF-RELIANCE AND A MORE PEACEFUL WORLD.

I-018-001

Great job with the DEIS. It is easier to read then I thought it would be. I would like to see more detailed maps of what land you are interested in off Rt 15. It is possible to have those maps at the public meetings?

I-020-001

#### I-020-001

Thank you for your comments. Land acquisition details will not be available and ready to execute until the Record of Decision is completed. More detailed maps of the potential land acquisition area are included in the Final EIS document.

I-021-001

Can the US put together a computer-generated model of just how Guam would be laid out once the buildup is complete? Land holdings, roads, infrastructure, water wells, harbors and docking sites plus all the main buildings it envisions will be constructed and made a part of this massive buildup slated to take some 4-5 years to complete would be included.

To visually show the people of Guam just what it is we're all talking about would be so helpful for us common folk to reference as we try and make sense of this endeavor.

**I-021-001**

Thank you for your comment. There have been talks regarding the development of computer-generated models of the buildup, but this information is not ready for public dissemination.

Windsurfers sail in Apra Harbor from Family Beach to Polaris Point. In strong > northeast wind conditions, there is often flat water conducive to > jibing (reversing direction) in the cove in which Polaris Point Beach is located. The > location of the berth in that cove would foreclose windsurfing, not > only in the area physically occupied by the ship, but also in the > area enclosed by the security barrier around the ship.> I question whether windsurfing will be possible in the area > even when the ship is not in the berth. The EIS documents indicate > that that the berth area will be wired with various security > devices, including devices aimed at swimmers etc which would > presumably be activated even when the ship is not in port to > prevent people from putting bombs on the harbor bottom at the > ship's berth. Therefore, I > have a feeling that that berth area, wherever it is, will be > foreclosed to swimmers, small craft, windsurfers etc permanently.>

Locating the berth on Polaris Point would also, of course, > defile a nice cove and sandy beach. The dock will be 12 feet in > height over the low water mark, and over 1300 feet long, and extend > from the Point right up to the beach.

### I-022-001

Thank you for your comment. Numerous criteria were used to develop alternative sites within Apra Harbor for the proposed aircraft carrier berthing, as described in Chapter 2 of Volume 4 of the Draft EIS. These criteria included issues related to practicability, feasibility, and cost as well as minimizing environmental impacts to the extent practicable. The DoD acknowledges that there would be some impacts associated with locating the proposed wharf at Polaris Point, which is the preferred wharf location. However, Polaris Point represents the "least environmentally damaging practicable alternative" which is why it is the preferred location, as explained in greater detail in Chapter 4 of Volume 4.

Website Comment Number: 34

Received: 12/2/2009 10:59:43 AM

I-024-001

I am outraged with the whole talk of military buildup on Guam! It is not needed, and with the economic times, would just cause Guam more problems. We do not need to be having thousands of strangers coming to our island acting like they grew up here, that they've been through the hard times we have, and act like they are above us. We do not need them to take all the job opportunities and residential areas that people in our island are currently fighting for. We don't need to have people spreading their cultures on OUR island that's already in the process of losing our own.

#### I-024-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-025-001

I am a private landowner who has a member in the family that owns land within close proximity to Andy South sector. We are very much open or willing to listen to any proposal for a lease agreement or other arrangement. What I do resent is for a local senator(s) to dictate how we should best utilize our land. That is a private matter between the military and landowners. So keep up the good work; the DEIS is acceptable to me and also to the majority of people.

I-025-001

Thank you for your comment.

## COMMENT SHEET

I-026-001

I am interested in a long term lease arrangement for land in Barrigada. I own only 2 acres, one of which is adjacent to one of the corners of the Air Force property in Barrigada. My sister owns 2 acres as well and may be interested in the same arrangement. My family owns some of the properties between the Navy golf course and the AF Barrigada properties. The area is residential and several new houses are being built. Some of my relatives have put their land in the area up for sale.

#### I-026-001

Thank you for your comment. However, given the general location of the properties you have identified, it is difficult to determine if the Department of Defense (DoD) has interest in acquiring the property or leasing the property.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 38

Received: 12/3/2009 11:41:09 AM

Subject: Local Transportation

First, I object to raised concrete next to a four lane highway being called a "sidewalk". Would you want your gradeschool child to walk to school on such a "sidewalk"? For example, I would never say Route 10 in Mangilao has a sidewalk!

Second, the whole attitude is a highway plan, how to accommodate increased need for local transportation by use of motor vehicles. The outlook should be how to accommodate increased need for local transportation by walking, bicycling and public transportation. This means building real sidewalks and real bicycle paths, not shoulders of a road. New right-of-ways should be restricted to emergency vehicles, public transportation, bicycles and pedestrians. The health implications and livability implications for the island's military and civilian populations of such an outlook are infinite.

#### I-027-001

Thank you for your comment. Modest roadway and intersection projects are recommended to address the worst of the traffic impacts caused by the military build-up; however, improvements to other transportation modes are also recommended. Bicycle shoulders and pedestrians ways are required for any roadway improvement project on Guam and have been incorporated into preliminary design plans for projects included in the DEIS. The DEIS also discusses the need for an improved bus transit system as part of an overall strategy for addressing future transportation needs. Detached paths and sidewalks can be considered in planning improvement projects but will likely have additional right-of-way impacts to adjacent property owners.

To those who are careful,

We the people would love to get more information about the plans are about to be accomplish...If the people are properly informed then there will be less confusion. People are stressing about their spaces being invaded by others outside of the local community. If respect for the people is shown. I think there could be a more compromising balancement of Judgemental planning. If the community is able to be apart of such planning influence then matters will move with ease. I know there is alot of money going to such plans. I know there may be ways that this project may improve the economy. Although People are aware of selfish ways when managing business we may still be able to find solutions and/or preventive measures of cohesive comprisations. The quality of business is about the people and it is important to show carefulness and respect to all those involved. Please take the locals seriously and maybe there would be more support for everyone.

Thank you for being able to really be genuine about such carefullness, Jonathan Santos and Friends of Guam

I-028-001

I-028-002

#### I-028-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

#### I-028-002

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

because I am a friend, for Guam:

I feel like the ko ko bird, who, after thousands of years, lost its ability to fly because there were no predators for them in Guam. Natural selection does that to us sometimes, clips our wings even though we may need them in case of invasion centuries later

thousands of brown winged bodies with underbelly white stripes moved as flashes across the beds of forests, and their shallow nests were built into the ground. Think of open mouths and morning sunlight.

I only know two things about Guam. One is that right after World War II the U.S. "accidentally" let the brown tree snake into a cargo ship on its way to Guam. Since the ko ko couldn't fly they were devoured - nest, chick, origin and all.

The other thing I know about Guam is that Spain imported carabao, a species of water buffalo, in the seventeenth century. They have been a national symbol and the herds once were plentiful. They are used to pull carabao boats, are ridden in festivals and are silent creatures unless startled. Since they dwindled the U.S. Naval base came to the rescue and offered a preservation "protected" by the military but really ended up serving as a field of extermination. They were contaminating the water supply on the U.S. occupied Naval Base which doesn't belong where it is to begin with.

I feel like the ko ko bird. My nest was on the ground. I was a flash in the forest. I took to the water. You came in accidentally and saw my natural habitat as a feast, now the nest is decimated and you're perched in the highest tree looking out over a land you know nothing about but claim with pride.

These are pieces of the puzzle, we must watch with open eyes.

One Love,  
Mei Li Mouse, Earth Warrior.

I-030-001

I see little reference to telecommunications impact in this report.  
No references to expected outages caused by construction.  
No references to expected bandwidth obligations and their impact on current internet bandwidth or projected growth of future bandwidth requirements.  
No reference to per household projections for newly reassigned military personnel.  
No reference to total bandwidth requirements for projected buildup services at various installations.  
No reference to fiber distribution plants, capacity, limitations, or measures to address any of the above.  
No reference to current capacity, and how much of that will be diverted to military needs.  
No references to current fiber backbone, and supplemental add/drop multiplexers requirements.  
In short, will Guam residents be relegated to "dial-up" speeds as the military usurps the majority of the available bandwidth, and provides that bandwidth to commands listed in this report?

**I-030-001**

Thank you for your comment. Effects on utilities infrastructure are addressed in Volume 6. Telecommunications needs are not included in the EIS.

**COMMENT SHEET**

Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 48

Received: 12/9/2009 9:01:15 PM

**I-031-001**

I have lived here for near thirty years and I dread the buildup. The fact thatg most of the build up construction is to be built by foriegn labor and not US citizens is sickening. We are in the middle of a financial crise where thousands of American families are losing their homes and unemployment is at 10% and we are bringing in labor from the P.I., so much for patriotism.

Thousands of well paid (by Guams standards) peopl[e coming inot the housing market is going to make decent housing difficult to find.

**I-031-002**

Just the massive release of hydro carbons into the atmosphere as a result of the increase air activity is a worry.

**I-031-003**

The military drilling wells to supply themselves and potentially ruining an all ready fragile water lense is problematic. That water belongs to the people here, not to a bunch of transients.

**I-031-004**

Thousands of horny GI s running around the island is not going to make the night life too fun, and will definately increase the number of prostitutes on island.

**I-031-005**

Wrecking Apra Harbor to provide access for aircraft carriers is going to damage the dive industry and force it out into more dangerous waters, that is not to mention the damage that the dredging will do.

**I-031-006**

Our schools and hospital are in bad shape, I really do not want to see a two tiered system wherein military folks go to nice schools and the locals end with a third world aging mess. If you are going to come here, yolubetter bring something for everyone, not just the chamber of commerce. Contractors should be compelled to pay the same pay as off island hires to local workers.

**I-031-007**

I really see little benefit to the build up and a tremendous amount of stress put on an already strained ecological and social atmosphere. Guam is not terribly crowded now but is getting there...the influx of Marines, not known to be the brightest boys around will do little to improve life on this island.

**I-031-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-031-002**

Thank you for your comment. Hydrocarbons in terms of Volatile Organic Compound (VOC) emissions were analyzed and described in the DEIS from all construction and operation activities. Although the proposed action would result in an increase in VOCs, increases would be within 250 tons per year level identified as the impact significance threshold in the DEIS.

**I-031-003**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water . The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an

advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks

The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-031-004**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-031-005**

Thank you for your comment. Volume 4, Chapter 16 of the Final EIS acknowledges that there could be impacts to ocean based tourism within Apra Harbor including diving. However, economic impacts to tourism would be somewhat offset by increased tourism from military personnel.

**I-031-006**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-031-007**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-032-001

I noted with interest the email from a Melvin Won Pat Borja yesterday.

My first reaction was, "and the alternative is . . . . .?"

GMH is in deep financial trouble; yesterday we learned a vendor cut them off because they owed over a half million bucks!!

DOE is broken, our poor children are being denied an education that would help them be independent for life - the average 12th grader has math skills of an 8th grader. Do our children deserve this? Why are we doing this to our children? And their answer is always they need for more money, money, money.

Think of how many times our power, water, and sewer rates have been raised and they still haven't replaced the transmission lines or the water/sewer pipes. More than 40% of all the water you pay for to pump out of the ground is lost through leaks. How much does that add to your monthly bills? If we do not expand the economy, and we aren't privatizing anything, where will the money come from to do all that needs to be done?

Since all revenues the Gov't receives is taxes or fees, and all taxes come from profits in the private sector, we need to encourage more profit. What is the alternative???

Attorney Leonard Rapadas recently said at the UOG forum, "we have to stop believing in myths, and deal with facts as it relates to the hype against the buildup."

To say that the population will be 70,000 more is simply misleading. The executive summary is not many pages, the average person can read it quite quickly.

On page 7 (ES-7) it shows the detailed breakdown; the population increase is expected to be 52,575 in 2013; 79,178 in 2014; and by 2017 it will be 33,431. The reason is obvious. No different than building a building that will be used immediately; towards the completion of construction all the workers, all the new employees, and all the trainers are there at the same time. Eventually the construction workers and the trainers go home. Such is the case with the buildup.

When you look at the EIS you will see it is probably the most complete document you have ever read - it covers every impact on Guam and in most cases has several options. I am glad it does and I am glad it has all the backup science to prove which idea is the best for us. You can see they are very concerned about our environment. The fact is that GovGuam will be the biggest beneficiary of the buildup by far.

My point is this, we must be factual in what we say and if we do not like the buildup, what is the alternative to our very poor financial situation? Please check out the paper by two Ph.Ds at UOG called "The Making of the Pacific Tiger. . . ." At some point we must face these realities.

I-032-001

Thank you for your comment. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study, Section 3.3.3.2 for an Overview of GovGuam Capacity Issues.

I-033-001

Further to my note on Thursday, I just realized that we have the highest standard of living of any island in the western pacific! I wonder how we got that way? Could it be that the good ole U S of A has really benefited us over the last 60 years? Ask the manamko what it was like 50 -75 years ago - did we do anything the way we do it today? We have been so fortunate compared to others. Everywhere you look you see how our lives have improved; how much progress our island has made; and how the people of Guam have been able to go to college, get advanced degrees, and made their mark in the world. That was possible because of progress; tourism has given us a cultural renaissance - when tourism started we suddenly had customers to sell our music, food, art - our entire cultural story to, and most importantly we were be able to make a living by it. This buildup gives us a chance for another cultural renaissance while our Gov't will be the largest benefactor.

Yes, we have progressed a long way. We have a lot of "candy." But our teeth are becoming rotten; we are taking too many things for granted; we qualify for all the welfare programs - that are supposed to be temporary while we find work/get an education/or acquire skills - and then we forget to get off of them because life is too easy. Look at the incidence of obesity, diabetes, gout, and high blood pressure - we aren't getting enough exercise, we are not eating right, primarily because life is too easy! The buildup will give everyone an opportunity to get the job they are trained for or have skills for and if the Gov't does its job right, they will force us to get out there and work so we live longer and healthier lives!

We simply cannot allow this buildup to be our excuse to do more of nothing. We all must get out there and get jobs so we will truly have self-fulfillment!

Draft Environmental Impact Statement/Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation

Reading Room

The Department of the Navy (DoN) and the Joint Guam Program Office (JGPO) invites your comments on the Draft EIS/OEIS for the Guam and CNMI Military Relocation. Please provide your comments below. Comment forms, or your own letter, will be accepted at the public hearings, or may be mailed to: JGPO, c/o NAVFAC Pacific, 258 Makatapa Drive Suite 100, Pearl Harbor, HI 96860-3134, Attention: GMPO. You can also visit www.guamblidupels.us to comment. Comments must be postmarked by February 17, 2010. Copies of the Draft EIS/OEIS are available for review at Nieves M. Flores Memorial Public Library, University of Guam Robert F. Kennedy Memorial Library, Joellen-Kiyu Public Library, Northern Marianas College Olympic T. Borja Memorial Library, and the Tinian Public Library. A DoN sponsored reading room has also been set up at Agaña Shopping Center for Draft EIS/OEIS review.

Please provide your comments below:

I-035-001

This is a large amount of data to take in - I hope we have professionals in Guam who can dissect & contribute a strong collective voice for stakeholders. For instance, teachers, parents, the average citizen.

Main concern - what "safety value" does Guam residents have when things are not panning out well for local citizens. Can legislators or our top public or private leaders effectively make changes or contribute to do the dialogue at Washington? Who can say "No" to Uncle Sam? If so, how and will this be respected by the powers that be? The crux of our concern.

I-035-002

No body has mentioned the impact to the public / Political process (at least I couldn't find it).... which needs to change to address this significant change + growth in our community. This political system has to change, too (among other things) in order to tackle this transition growth... Meaning an political relationship or communication / approval process b/w

\*\*\* Please Print Clearly\*\*\*

Uncle Sam + Guam  
Leaders

Comments must be postmarked by February 17, 2010

I-035-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

I-035-002

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

I-036-001 |

Please find some way to keep the hiking trails open, or allow access to trails in non-high security areas.

#### I-036-001

Thank you for your comment. It is not known which trail you are referring to; however, DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-037-001

Unless the US government is going to upgrade/modernize Guam's infrastructure, then the proposed marine base should be located elsewhere. The project will not benefit anyone, least of all the Chamorro people. Your new barbed wire gates around the development will only emphasize the isolation military personnel perpetuate on Guam -- us vs them. Take your base and locate it where the environment and citizens, as well as the marines, will be welcome.

#### I-037-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

First of all I am a student currently attending the University of Guam. The military build up consists of both pros and cons. I firmly believe however, that the cons outweigh the positive aspects of this build up. Our island we call home will not only be destroyed due to this buildup but it will also lessen the value of our heritage. I am not anti- U.S. Nor am I anti military, do not get me wrong. However, I feel that this build up is just going to cause more of a dilemma on our island. The waste in which we dispose of will add up for one, due to thousands of more people arriving. Not to mention our current landfill which is overloaded. Economically, we already reached one of the lowest points in our history if not the lowest point economy wise. Socially, our island will be crowded throughout, our crime rate will increase dramatically and our schools will be filled once again with the possibility of an overload. Also with 22 more water wells that will be installed in Fena lake, that does not mean more water but what it does mean is that water would be depleted at a faster rate than normal. The federal government needs to realize that us indigenous people are the ones who are going to pay the price of this build up. The value of our land that is going to be occupied by the military has value. The destruction of the land is a sign of disrespect to our ancestors. Please take these opinion and comments into consideration. Si Yu'us Ma'ase, and thank you

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

#### I-038-002

Thank you for your comment. Regarding solid waste, the DoD will utilize their own landfills until the new Gov Guam landfill at Layon is open. This is expected to occur by July 2011. This new landfill is currently under construction. DoD shares your concern regarding the volume of solid waste and plans to expand and improve its current recycling efforts at Andersen Air Force Base to all DoD installations on Guam. In addition, reuse and recycle efforts for construction and demolition debris generated during the construction phase will be implemented to minimize this volume of solid waste.

#### I-038-003

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-038-004**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks. The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-038-005**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate

with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 59

Received: 12/18/2009 11:12:43 PM

I-039-001

Hafa Adai, I am pro military buildup on Guam and read quite a large portion of the EIS. What I am missing is a clear statement on how to reduce and conserve energy. I am involved with environmental protection from sustainable tree planting, rainforest protection, alternative energy use, and energy conservation in general. In my projects I am supported by Tradition Financial Services (TFS). TFS is a subsidiary of Compagnie Financière Tradition (CFT), one of the world's top three brokers in financial and commodity-related products, covering the full spectrum of energy and energy-related markets. The projects I am working on are all in compliance with the United Nations Framework Convention on Climate Control (UNFCCC) in compliance with the Kyoto Protocol to reduce greenhouse gases. During the COP15 meeting in Copenhagen December 2009 President Obama said "I came here to act. Our ability to take collective action is in doubt". He stressed that America has a responsibility being the world largest economy and second largest emitter of greenhouse gases, to move toward a green economy.

There are possibilities to reduce energy consumption with a high payback and at the same time receive international recognition by the United Nations and there partner countries as one of the first American Military Bases to introduce greenhouse gas reduction projects.

For example: Let's assume that the Navy spends over \$1 million for streetlight power, this relates to a power consumption of 4.5 million kilowatt-hours per year based on a cost of 22 cent per kilowatt-hour. This can be reduced by 50% with newer energy saving technologies and with lower output depreciation over lamp life.

The energy savings would roughly translate into a reduction of 3600 tons of carbon dioxide (tCO<sub>2</sub>e). Having this project approved by the UNFCCC with a project period of 10 years would provide 36000 Carbon Credits that can be sold on the international stock market with a current price of \$18 each or a total of \$360,000. At the same time maintenance cost for replacement of burned out streetlights can be reduced by at least 35%, roughly \$120,000 per year. This would result in total savings of \$6.5 million over 10 years.

Please, contact me if you would like to hear more about it.

## I-039-001

Thank you for your comment. DoD agrees that energy conservation and reduction is critical to its operations. DoD promotes the conservation of energy, the use of alternative energy, the reduction of carbon dioxide and other greenhouse gases, resource conservation and efficiency, and other responsible environmental measures. DoD is committed to the protection of human health, welfare, and the environment and when conducting its mission, is required to comply with all applicable federal, territorial, and local laws and regulations related to protection of the environment and the effective and efficient use of resources including waste minimization and reduction, energy conservation, "green initiatives" and related actions. DoD has developed various guidance, procedures, protocol, and best management practices (BMPs) to ensure the protection of human health and the environment. Specific to energy conservation and reduction initiatives, DoD implements aggressive hazardous materials and waste minimization plans that maximize the use of non-hazardous materials/wastes as appropriate and uses LEED's criteria. LEED is an internationally recognized green building certification system, providing third-party verification that a building or community was designed and built using strategies aimed at improving performance across all the metrics that matter most: energy savings, water efficiency, CO<sub>2</sub> emissions reduction, improved indoor environmental quality, and stewardship of resources and sensitivity to their impacts. These environmental management actions above are described within the EIS document and the DoD is committed to their implementation on Guam regardless of whether or not the proposed action occurs.

I-040-001

I am very much opposed to any dredging in the harbor that will impact our turtle grazing areas. These are endangered and threatened species and must be protected. Any dredging must also protect their nesting areas. Guam has already lost valuable land for these purposes.

I-040-002

I am also opposed to any clearing of areas that will damage habitat of our endangered species including the Koko and bats.

Guam has already lost so much with the introduction of *Boiga irregularis* that any other threats to our environment must be avoided.

Patty Jo Hoff, Ph.D

#### I-040-001

Thank you for your comment. The proposed action within Apra Harbor (an active commercial and DoD port) has been evaluated and will not significantly impact the federally protected green or hawksbill sea turtles with implementation of mitigation measures. The Navy currently implements standard operation procedures, mitigation measures and BMPs that consider federally protected species and their well-being. The Navy has co-existed with sea turtles in the Harbor for over 60-years. The Navy, in a partnership with the Fish and Wildlife Service, monitors sea turtle activities within Apra Harbor and around Guam. There are no records of sea turtles nesting on beaches within Apra Harbor that would be impacted by the proposed action and there have been no reported observations of sea turtles grazing within the area to be dredged.

The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction) to lessen any potential impacts to sea turtles and sea life in general. Additionally, the Army Corps permit will require measures to protect biological resources. These measures may include the following: biological monitors on vessels (making sure sea turtles and dolphins [although rare in Apra Harbor] do not approach the area); halting of dredging activities, if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area, low lighting, and as described above, joint Navy/Guam Resource Agency monitoring of nesting beaches though out Guam, to name a few.

#### I-040-002

Thank you for your comment. The preferred action would not affect a large percentage of land available for endangered species. On Guam, the combined area directly and indirectly affected represents 5.4% of

recovery habitat island-wide for the endangered fruit bat and kingfisher and 2.25% island-wide for the endangered rail.

I-041-001

I am toatally against the Military taking over the land at the Race Track located in the Pagat/Mangilao area in order to be used as a Shooting Range when in Fact there is an Existing Shooting Range Located on Military Property. First of all that area is Surrounded by Numerous Home's and Farm's. The Location is also just one of the Few location's on the Northern part of the Island that is used as a Hunting Area for Deer and Wild Boar's and Pluse the area has a large amount of Black Franklin Population which is almost extinct on the Island,also there is the Ancient Latte Stone Village located near the cliffline which is a Historical Site and which Should Not be Blocked Off, Removed or Damage in Anyway because of it's Historical value to the Local People of Guam. The Cliff line area is also Used and Frequented by Hiker's and Fishermen who Overnight/Camp along the Cliffline's to either enjoy the Scenery or Catch fish ... I being one of them. The Area is Such a Scenic and Pristine Area that to turn that place into a shooting range for the Military would be such a Disgrace to the Island and the People of Guam. Anderson Air Force Base Has a Large and an Adequate Shooting Range already in Place which could be shared between the Airforce and the Marine's, and if it doesn't meet the Marine's Need's, the Range can easily be Renovated to Meet the Need's of the Marine's and the plus to this would also save the U.S. Military Money. And on another note, Relocating the Only Legal Raceway Park will Definatly cause an Increase in Street Racing throughout the Island and would cause the Local Autmotive Enthusiast's to Wait Year's Again for another Raceway Park to be built, when they were Already Waiting Year's to have this one built. Guam is such a Small Island and it is Small Enough as it is and by Taking away the Land Again and Limiting Access to a Large Portion that is Frequented by the Local Population would make Guam that Much More Smaller. It's such a Disgrace to our Island and People that Valuable Land would be given to the Military for a Shooting Range when it can't even be givin to it's People to live on. It make's me Sad to Know that the Island of Guam will no longer be Known as The Island of the Chamorro People and where "America's Day Begin's" , it will now be known as Home of America's Military. I do Support Our Troop's but I don Not Support the Condemnation of Land to be used for a Shooting Range.

I-041-002

I-041-001

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-041-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. I-042-001

Kudos for doing all this research for the relocation. The way it's presented it is very bias to benefit the Military and the outside contractors only. Very little does it do anything for the island and its current residents. The plans state taking more land! The federal govt already owns a TON of land that is not even being used. For instance, properties surrounding Big Navy, Admiral Nimitz Golf course area, the antenna field areas in Barrigada, South Finegayan areas, the FAA property, North West Field, NCTMS Andersen AFB... I've been in these places, what a waste of property! It's not used efficiently, there's so much unused portions of land it's ridiculous! Everything is so spread apart like it's farm land in the mid west! the expensive playgrounds look like they are never used and look like a waste of tax dollars. The plans state taking a huge portion of land in the north east of the island. What happens to those land owners? there is not much option for them is there? And to take away popular hiking spots and the islands only recreational facility for motorsports enthusiast is unacceptable! The Guam international Raceway facility has helped decrease street racing dramatically! It has hosted some of the biggest events in the Marianas with coverage on ESPN and other large networks. If you plan to take this property, is there any plans to replace it? Has there been any thought to where the 8,000 soldiers (mostly young men) + families are going to go for recreation with their fixed up cars and bikes??? It's a quality of life issue for them too I think. I know a ton of military in Okinawa that are involved in the motorsports scene out there. Seriously, I may be one voice, but I speak for the hundreds who utilize the facility... What are you going to do about this? For the land owners who you plan to evict, why would you do such a thing? Put yourselves in their shoes. Fair market value??? the economy is at it's worst. Their not going to get FAIR value on their life investment. Please figure something out, there's gotta be a solution. your safety zones or bat wings for the shooting range can be overlapped im sure so you dont take as much as you propose.

#### I-042-001

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners, any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. While I support the protection of liberty and safety from our adversaries, I do believe that the United States Military has an urgent need for relocation. And because of this need, they will take over any region to pursue their objective; therefore, while they post this summary of their proposal, it is easy to be caught up in all the million-dollar words (which leads one off the path of truth), and loose the truth. After reading only two (2) volumes of the document, I opine that everything appears to be in the best interest of the civilian population of Guam. However, at the end of every proposal, the document holds the Government of Guam accountable to making the necessary changes in order to ensure the public health and welfare of the common inhabitants. An example is the proposal concerning water and health. According to the document, they (U.S) propose such an interesting and convincing informational piece concerning health and welfare; however, then, make the Government of Guam liable, responsible, and accountable for ensuring that they (GOVGUAM) will build a sustainable Public Health Administration and Hospital to meet the demand of the public resulting from the build up of the military. I do not see any substantial surveys, information or statistics provided by the Govt. of Guam to support or unsupport this document. Therefore, I recommend that the civilian population of Guam take this historical era seriously and reconsider the documents presented to them, in the guise of safety and security. I ask...in whose safety and security?

I-043-001

#### I-043-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD also has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the Final EIS.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 65

Received: 12/23/2009 3:15:58 AM

I-045-001

The draft does not fully address the impact of the relocation on nursing education and services, e.g.

1. how many military personnel and dependents are now at UOG or GCC, or the health facilities - a definite increase over the past 2-3 years  
of transients who want to complete the nursing program within the time limit of their deployment on Guam

2. the increased number of inquiries to the UOG nursing program that requires time spent for free services related to transcript evaluation and advisement (approximately 15 inquiries received over the last 10 months, by email for transcript evaluation or program inquiries).

3. The UOG nursing program has 20-25% military personnel in the Nursing major, and more in the Prenursing major of the BSN and ADN programs.

And the impact of expanding health facilities for military personnel in terms of:

1. the number of local nurses now serving in the military hospital and clinics  
2. active recruitment of nursing students/graduates to the military - and the effect on local health facilities - contributing to the shortage of nurses in these non-military facilities; specifically the impact on mental health services also used by military/related personnel

3. The impact on the number of nurses for non-military health facilities when military-related UOG enrollment continues to increase

The EIS/OEIS report should address:

1. How to assist UOG by deploying military nurses who are master's prepared in a nursing specialty to teach (MSN is the minimum requirement for theory instructors; BSN for clinicals).  
2. Work with UOG School of Nursing and health Sciences (SNHS) to train military nurse adjuncts in teaching practicum courses using the Naval Hospital/AAFB and clinic facilities- to alleviate the anticipated increased student load at GMH facilities.

3. Work with UOG SNHS to provide specialty certification review to develop more local nurse specialty expertise, e.g. AORN, Medical surgical, pediatric, mental health, etc. nursing

4. Provide training supplies and equipment to the SNHS learning skills lab to augment learning lab resources

GCC has an LPN program, collaboration would be in order based on interest in that nursing program by military personnel or their dependents.

These are a few concerns that can be addressed through early communication, collaboration and partnership with UOG SNHS increase the number of nurses for local and military health facilities

## I-045-001

Thank you for your comment. The Final EIS has been updated (Volume 2) to better address impacts on social services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-046-001**

**I-046-002**

The EIS is another example of U.S. propaganda in a long history of U.S. military unilateralism in the Pacific Islands region. The public forums in Guam--and the entire Joint Guam Program Office apparatus--also defray rather than welcome criticisms, as the legal logic of the remilitarization of Guam pivots along the lines of U.S./Japan political negotiations and not along the lines of the interests of everyday people and the diverse communities of Guam and the wider Asia-Pacific. However, the forums and other examples of public debate are raising the consciousness of island residents. If the U.S. military proceeds, then, with its goals then one issue remains certain: there will be an increase in the polarization between the "military" and the "non-military," resulting in greater misunderstanding, tension and perhaps violence between the two parties. As history reveals in the cases of Algeria, East Timor, New Caledonia, Vietnam and elsewhere, violence (ideological, physical or otherwise) begets violence. Guam and the Marianas are no exception.

**I-046-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The FEIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the FEIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-046-002**

Thank you for your comment. Public comments on the DEIS are an important part of the decision-making process. This information becomes part of the FEIS and is evaluated when DoD prepares the FEIS and issues a Record of Decision at the end of the NEPA process. The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall social tension. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as

prone to conflicts and misbehavior. DoD educates its service men and women on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 79

Received: 1/6/2010 1:25:51 AM

Guam roads already experience congestion and with the population increasing by about a third Guam roadways will further be burdened. A 15 minute drive could turn into over an hour drive easily. Guam roads are already eroded and pothole ridden in many places. How are we to address this as I understand the road plan between Navy and Andersen is not going to happen.

I-047-001

#### I-047-001

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 80

Received: 1/6/2010 8:07:36 AM

Will the aircraft carriers when berthed on Guam be discharging its sewage collection and trash in Guam's sewage system and landfill? Since an aircraft is described as a small city with six thousand people how much sewage and solid waste can our island expect for each aircraft carrier?

I-048-001

I-048-002

#### I-048-001

Thank you for your comment. Yes, the transient ships would unload solid waste while docked at Apra Harbor. Solid waste would be transferred to the new Gov Guam landfill at Layon. This arrangement is at the behest of Gov Guam as joint use of the landfill is both economical for Guam and DoD, and is the most environmentally sound solution. The estimated quantity of solid waste that would be generated by the carrier group will be a small percentage of the DoD solid waste stream. This is based on the carrier group being at port up to 3 times per year, for not more than 21 days per visit. DoD's waste generation rate was included in the planning and the design of the Layon landfill. The Gov Guam landfill at Layon would be permitted by EPA, and must meet environmental laws and regulations for solid waste disposal. Sewage from all ships berthed at Apra Harbor, including the aircraft carrier, is collected and treated in a Navy-owned sewage treatment plant on the base. This treatment plant has a permit that is issued by EPA that includes requirements for treatment. The treatment plant can accommodate the expected sewage flows from visiting aircraft carriers.

#### I-048-002

Thank you for your comment. The sewage would be pumped to the Navy's secondary sewage treatment facility at the Navy base and treated prior to discharge via the ocean outfall. The expected volume of sewage (0.55 million gallons per day) is within the capacity of this existing Navy treatment facility (4.3 million gallons per day capacity and current demand of 2.9 million gallons per day). The advanced treatment (known as "secondary" treatment) assures that Guam water quality standards are currently being met and would be met with the increased demand. Guam public utilities would not be impacted by this wastewater from the transient DoD ships.

Please provide your comments below:

Guam - Where and what is Guam? Guam is located at 13N/144E and Guam is where "AMERICA'S DAY BEGINS"  
Guam has an economic diverse of Cultural entities, but first and foremost, "We are Americans!" Guam is to host another military buildup, this involves the U.S. Marines. Guam has been very critical in its location in the Pacific arena. Guam has played key roles in the past few wars, to include Vietnam, Bosnia, Panama/Grenada, Somalia, Desert Storm, and now continuing with Iraq & Afghanistan.  
In today's economic crisis it is hard to run our Local Public Schools and Health System at par with compare to Guam's guest - DODEA. I feel that Guam as the Host Nation should have the same educational and Health Care system as our military guests. I shut down the DODEA schools and let the military dependents use and share Guam's Local Schools. There is opportunity for military dependents to become School Teachers and Health Doctors & Nurses on Island during their PCS move to Guam. By doing this, the Federal Government will take care of our Local Children and our Military School Children at the same time.  
"Remember... Leave NO CHILD OUT ACT"  
Let's live as ONE AMERICAN SYSTEM!!!  
We're ALL in it Together!!! \*\*\* Please Print Clearly\*\*\*

I-050-001

Thank you for your comment. The Department of Defense Educational Activity (DODEA) does have schools on other bases in the U.S. in addition to Guam. The separate educational systems on Guam (public schools and DoD schools) were based on a determination in the early 1990s that the Guam public schools neither met the educational instruction goals or the physical facilities standards that DoD required. When Guam public schools meet DoD requirements, a re-evaluation can be undertaken to determine if DoD needs to maintain their own school system or if the Guam public schools can adequately meet DoD requirements.

Relating to the Guam Hospital, the DoD has no statutory authority to construct a new public hospital for Guam. However, money from taxes, fees, and reimbursements would support these facilities and services. The DoD plans to have several medical clinics in Guam and a new replacement Naval hospital would provide health services to the military personnel, their dependents, and military beneficiaries. Additionally, it is anticipated H2B workers as well as on-island workers will have health plans and private clinics will provide medical services.

Finally the Final EIS acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

Handwritten comment: The issue is Southern Power, since a 17 year-old sewer line at Southern High School, over the past couple of weeks... however, Mr. Nelson Wong-Pak Bojia, has been educating our class about issues that Guam will face & have to deal with during & following the relocation of 8,000 Marines & not to mention their families & other workers involved in this move... I am concerned about the toxic waste that will be put on our island due to building a new waste & storage center... I am also concerned about the Army of land & construction of buildings needed to facilitate the needs of the Marines, besides, I am concerned about the overpopulation of our islands. There is no doubt that carbon emissions will increase along with the cost of living. Our local community will have to compete for jobs against privileged individuals... I am going to produce in a matter of months & will be out in the real world. I have already seen an increase in the of our precious natural resources & hope that the right things will be done.

I-051-004

I-051-001

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. In addition, the DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, pesticides, etc. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances. When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs), standard operating procedures (SOPs), and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs, SOPs, and other controls are fully described in the EIS document. However, these are not considered "mitigation measures" since they are already being performed by law and do not represent new actions to "mitigate" hazardous substance usage issues. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have

been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered.

With regard to proposed firing ranges for MEC, the proposed ranges will be designed and maintained in accordance with all applicable federal and Government of Guam regulations. Specifically, Military Handbook 1027/3B contains procedures for reducing potential impacts from ranges through the implementation of BMPs. These include introducing soil amendments, vegetation management, engineering controls, instituting contaminant monitoring, reclaiming, and recycling. With ranges, lead is the primary leaching contaminant of concern and best management practices can minimize or prevent leaching of this constituent. Impact rounds from pistol rounds generally stay intact and impact rounds from rifle rounds often fragment. Intact rounds and rounds fragmented into relatively large pieces are not easily transported by natural transport mechanisms.

Through the proper design of ranges, application of BMPs, and monitoring, the potential for groundwater contamination would be minimized. BMPs can reduce or eliminate the leaching of lead to the environment. These procedures may include controlling soil pH to between 6 to 8 to prevent dissolution of lead, mining of lead from back stop berms, implementing a soil leaching monitoring program, and adding phosphate containing soil amendments to bind dissolved lead to the soil. Prior to building the ranges, an engineering study would determine the minimum depth of soil cover to ensure sufficient soil cover of the limestone, and to assess the suitability and optimum technique to add soil amendments such as phosphate to prevent lead leaching. In addition, when percolating water reaches the porous limestone the pH will increase, encouraging the precipitation of lead out of solution. The DoD will monitor for selected contaminants of concern. If monitoring identifies significant impacts, such as indications that chemicals of concern may exceed regulatory standards, reduce beneficial uses, result

in adverse human or environmental health effects, or conflict with federal or Government of Guam regulations, then additional action would be taken to address these impacts. These comprehensive actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

**I-051-002**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-051-003**

Thank you for your comment. There would be an increase in carbon emissions associated with the proposed action. However, the quantification of greenhouse gas emissions conservatively predicted in the DEIS shows that potential impacts would unlikely be significant.

**I-051-004**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such

as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

I-052-001

I would like to see better roadside maintenance on Naval Magazine in Santa Rita.

I-052-002

I don't want the inner harbour to be dredged for the carrier.  
For one thing: It will take a hundred years for the coral reef to get back life.  
: It will also destroy marine life.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-052-001

Thank you for your comment. The proposed action has very little to no impact to the roadways within Naval Magazine. There is a proposed roadway to Naval Magazine for training but does not connect to the existing Naval Magazine roadway system. Roadway Maintenance should be addressed by existing maintenance operations.

I-052-002

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and periodic maintenance dredging continues. Most of the proposed area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The U.S. Army Corps of Engineers permits will likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects. To compensate for the loss in ecological services and function provided by the coral reef ecosystem, upland reforestation (to improve nearshore water quality), artificial reefs (to provide increased fish habitat) or a combination these and other compensatory mitigation alternatives will be considered by the Navy to comply with federal laws that protect coral resources.

Additionally, the DoD, as part of the "build-up" on Guam, will participate in the future upgrades to the Northern District Waste Water Treatment Plant such as from Primary to Secondary Treatment if required by the EPA. This action will assist GWA in meeting its coastal water quality standards and provide benefit to the marine life and people of Guam.

I-053-001

I-053-002

I-053-003

I am concerned by the fact that land will be scarce for the local people as a native to this island we will lose access to areas we enjoy. I don't agree with the building of new wharf you will be destroying our beautiful coral and sea life that our people depend on to feed their families.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-053-001

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-053-002

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and

access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-053-003**

Thank you for your comment. The location of the new Navy wharf was chosen as the least environmentally damaging alternative, in efforts to avoid the live coral in the area. The proposed area to be dredged is mainly within a sand and rubble zone. Based on analysis provided in the EIS, impacts to subsistence fishing/collecting from the proposed action would be minimal; returning to baseline conditions after construction is complete. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. The Navy will implement mitigation measures and best management practices during in-water activities (i.e. dredging, wharf construction) to help lessen impacts to the marine environment. The U.S. Army Corps of Engineers permits will likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects. To compensate for the loss in ecological service provided by coral reef ecosystem, upland reforestation (to improve nearshore water quality), artificial reefs (to provide increased fish habitat) or a combination these and other compensatory mitigation alternatives will be considered by the Navy to comply with federal laws that protect coral resources. Additionally, the DoD, as part of the "build-up" on Guam, will participate in the future upgrade of the Northern District Waste Water Treatment Plant from primary to secondary treatment if required by the EPA. This action alone will assist GWA in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam.

Please provide your comments below:

Environmental Impact Studies are nothing new. The Military presence on Guam has been here before I was born, there are some areas that have been discovered as contaminated and the local people cannot fish or swim in those areas. What makes this Military buildup any different? How are the ~~soldiers~~ <sup>MARKERS</sup> who are brought here going to know what part of the land they are using for training is a sacred burial ground or if they are on top of a water reservoir? The Navy dumps its waste in our ocean-area, but the current brings it in, have you noticed the smell when passing by Pagan Pt? How can DoD ASSURE us that our island will remain as it is now?

I-054-001

Thank you for your comment. As part of a program to avoid disturbing archaeological sites and artifacts, historic property awareness training will be provided to all Marines on Guam. No known burials sites will be impacted by the project due to careful planning to avoid these areas.

I-054-002

Thank you for your comment. Many underground water reservoirs (tanks) are fenced and identified. Marine training grounds avoid storage tanks.

I-054-003

Thank you for your comment. The proposed construction and operational activities (including waste disposal) would be implemented in accordance with all applicable regulations described in Volume 8 of the EIS. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure.

I-055-001

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations. Additional projects to address the 2014 Peak Construction time period were not pursued because they would be very impactful to the environment, require substantial right-of-way acquisition, and be very costly. Instead, travel demand management methods such as improved transit, ride-sharing, and alternative work schedules are proposed to manage traffic in the 2014 time frame.

I-056-001

I am a former DoD employee, I am reinstatement eligible I have applied for numerous vacancy announcements and do not see any status updates in my online profile. How can I inquire on my status, can I call a number and get someone to check if I am on the qualified list of applicants. Is there a department here locally that is taking care of the hiring?

I-056-001

Thank you for your comment. The EIS does identifies approximate numbers of civilian employees to be hired by the DoD. Specific hiring procedures, however, are not addressed in the EIS.

① Since Guam has such a lack of birds, bats or other known species that are traditionally known to spread seeds of trees, Guam should adopt of ~~previously addressed~~ to include Arbor Day. With our northern limestone forests disappearing, trees need to be replanted.

I-057-001

I-057-002

Had to know that a portion of reefs within the commercial port will be excavated. The fact that reefs only spawn one time per year for only one night. The dredging &/or accompanying silt will (may contribute to) add reef damage. Our little island's reefs are so becoming damaged - a little here & there but it's adding up. If someone wasn't aware of this, just put a pair of speedo goggles on (nothing expensive needed) & swim north from Ypao Beach towards the north. Requiring the GWA outfalls to take waste water out 3 miles & deep enough may help save our reefs maybe this build-up can work in tandem to prevent these manmade disasters from becoming even worse.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:

I-057-001

Thank you for your comment. Reforestation projects and projects to improve the quality of existing forests, such as control or removal of pigs and deer, are being considered as conservation measures for the impacts of the proposed action. Arbor Day, while not part of this action, is something that would be better addressed in the Integrated Natural Resources Management Plans for the installations.

I-057-002

Thank you for your comment. The U.S. Army Corps of Engineers permit for dredging will likely require operations to be halted for potential coral spawning during the summer full moon months (July-August). The least environmentally damaging alternative has been identified by the Navy, which minimizes direct impacts to higher quality coral reefs and requires less dredging than the other channel options considered. Mitigation measures will be in place to reduce sedimentation impacts of resuspension during in-water construction activities to protect coral reef communities. As part of the military "build-up" of Guam, the DoD will be participating in the future upgrade of Guam's Northern District Waste Water Treatment Plant from primary to secondary treatment if required by EPA. This action alone will assist the GWA in meeting its coastal water quality standards for the benefit of sea life and people of Guam.

**I-058-001**

Thank you for your comment. Vessels routinely dock in Guam as a function of the DoD mission and by virtue of this action, it should not be assumed radioactive or any other hazardous substances are leaking. DoD has numerous procedures, protocols, and directives that must be followed which are designed to prevent, control, and mitigate the spill or release of hazardous substances including radioactive materials. DoD must comply with all applicable Federal, territorial, and local laws and regulations regarding the transportation, handling, use, and disposal of radioactive materials. Furthermore, there are various best management practices (BMPs), standard operating procedures (SOPs), and controls used to ensure the protection of human health, welfare, and the environment. These actions include, but are not limited to:

- Develop/implement radioactive material management plans.
- Develop/implement spill prevention, control, and countermeasures (SPCC) plans (e.g., training, spill containment and control procedures, clean up, notifications, etc.).
- Ensure DoD personnel are trained as to proper labeling, container, storage, staging, and transportation requirements for radioactive materials. Also, ensure they are trained in accordance with spill prevention, control, and cleanup methods.
- Implement radioactive waste minimization plans as appropriate.
- Verify through surveillances and inspections that federal, local, and DoD laws and regulations are being observed and implement corrective actions as necessary.
- Minimize the risk of uncontrolled spills and releases through industry accepted methods for spill prevention, containment, control, and abatement.

These and other BMPs and SOPs will ensure that human health and the environment are protected. However, BMPs and SOPs are not considered mitigation measures since they are already being performed by law and do not represent new actions to "mitigate" hazardous

substance usage issues. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered. These actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

I-059-001

*For the doctors / MD's that will be caring for our soldiers!*

*With training in or near the Fena Lake area and/or ~~SEA~~ Narmaq, our soldiers will be in a perfect breeding ground for leptospirosis aka "lepto". I would recommend the medical personnel be trained on how to recognize symptoms of lepto. It's easily contracted through soil and/or water where wild animals have been. Many times a patient may show flu like symptoms but very few local physicians (there are a few like Dr. Ballinger and Dr. ~~aka~~ Guam Medical Clinic) that know the symptoms. I would recommend training and test kits be readily available to treat those that were exposed to "lepto". There is a fast acting medicine that can treat lepto before it gets too far along & minimize a person's bodily organ damage.*

*From someone that has known several folks that did contract lepto, it's very very felt like dying (it can get that severe if not caught/ diagnosed right away).*

*ps. our wild cambers, pigs & deers are part to blame*

\*\*\* Please Print Clearly\*\*\*

I-060-001

I think this military build up should not happen on Guam, because they might take away our cultural lands. I think that bringing more jobs and schools is a good thought to Guam but I do not agree with all the military being here and causing the same problems they did in Okinawa. We can not afford to have criminal activity on Guam. Why would you want to take our land and build more houses and buildings for those people who are coming in, when we are fighting with the government of Guam for our lands. I like the thought of the military helping us out, but I do not like the thought of this military build up taking away our land. For example, Judy Wen Pat is trying to shut down F. Q. Sanchez Elementary School because we are short of money. Thank You for reading my thoughts.

I-060-001

Thank you for your comment.

I-060-002

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct

and enforce laws to protect the citizens of Guam and our military personnel.

**I-060-003**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

Details regarding land acquisition were covered in the DEIS Land and Submerged Land Use Chapter. Further detailed information on the land affected will be provided in the Final Socioeconomic Impact Assessment Study (SIAS) and Final EIS document. The SIAS is presently in Appendix F, Volume 9 of the Draft EIS.

Many of Guam's public facilities, services and resources may be considered "inadequate" and comments received during the DEIS asked

that these be improved by the military buildup project. While some improvements that also benefit the existing population could be made, it should be noted that many of the facilities and services provided to the military are benefits they receive elsewhere on U.S. bases. The larger community that the base is within benefits because of DoD expenditures, personal expenditures, jobs (direct and secondary), businesses supported, and taxes and other fees that would go into Guam's general revenue funds.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 81

Received: 1/6/2010 4:33:27 PM

I arrived in Guam in 1966 as a contract teacher and retire from Guam as the Federal Defender for the District of Guam. I raised 4 children on Guam during the 35 of 37 years between 1966 and 2003. My youngest son was born on Guam and married a young woman of Chamorro ancestry. I have had a chance to observe the good of the Chamorro lifestyle---close family ties, respect for elders and undying patriotism to the United States.

When my family arrived on Guam the population was approximately 65,000. The military at that time controlled a huge amount of the island, much of which was off limits to civilians. Eventually Naval Air Station was returned to the people of Guam and was for many years a home to the soccer leagues which consumed much of my free time.

My tenure in Guam also consisted of activity as a union official--American Federation of Teachers, Local 1581---and as a founder of the Labor Council of the Western Pacific. I have many concerns about the increased population of Guam if the Marine relocation occurs. Primary among those is who will build the necessary infrastructure to support the relocation. Will it be Koreans who under a treaty with the United States were beneficiaries of not having to pay their "H-2" workers Social Security, thereby giving Hyundai a 13% advantage on worker costs over for example Black Construction? Or, will the construction be with unemployed US construction trades persons? Will the federal government provide financial assistance to the Government of Guam to offset the increased costs to the public school and health system of those persons coming to Guam, such as entertainers, because of the presence of the Marines? The United States government certainly has never compensated the local government for the increased costs of the FSM, Republic of Belau and Marshall persons who came to Guam for either "education or employment" under terms of the treaty with the US.

#### I-061-001

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

I-061-001

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 82

Received: 1/6/2010 9:19:59 PM

It appears from the current EIS that the housing density requirement is driving the need for more land for the relocation of Marines from Okinawa to Guam. Currently, Marine families on Okinawa live in a mixed-use setting of mid-rise or high-rise apartment buildings, townhomes, and single family residences.

I-062-001

1. Why has the U.S. Government decided to use low housing density criteria to eliminate the need for mid-rise or high-rise military housing? It seems that the consolidation of current housing units on Guam to mid-rise or high-rise apartment towers would completely eliminate the need to purchase and/or condemn new lands required for this relocation. Please do not point to the Unified Facilities Criteria (UFC) as your reply to this question. The UFC allows very high density family housing structures for land constrained areas. I would expect to see mid-rise to high-rise apartment towers used for this relocation just like the military family housing used throughout Japan.

2. Please describe why the total cost of ownership of mid-rise and high-rise apartment towers has not been compared with the current plan for military family housing? These housing structures should have been compared side-by-side to determine which structure has the lower life cycle building cost, lower maintenance cost, and lower energy cost for the life of the structure.

3. Please describe why the U.S. Marine Corps Headquarters Housing Director and executive staff forced lower density housing on Guam as a morale and retention issue during the development of this relocation plan? Why was matching current military family housing density on Guam and Hawaii the priority rather than using this relocation to drive higher density military family housing densities. Guam is one third the size of Oahu and is not land rich like the Mainland as to warrant absolutely no consideration for mid-rise or high-rise apartment towers for military family housing.

## I-062-001

Thank you for your comment. The current DOD standard for housing density is 4 to 6 dwelling units per acre. Consistent with the "live where you work" concept, the Marine Corps has expressed a desire to locate all associated housing on one contiguous main base. Likewise, it has expressed a desire to ensure the housing density for Marine Corps personnel and their families is compatible with other service housing densities on Guam, which are approximately 4.7 dwelling units per acre.

Please provide your comments below:

I am concerned about the increase in traffic due to the increase in population. Perhaps now it is time to really develop an efficient and effective mass transit system that runs all the time/on time. Perhaps setting up a share a ride system. Perhaps it is time for a "highway"

I-063-001

**I-063-001**

Thank you for your comment. The 2030 Guam Transportation Plan outlines recommendations for an improved mass transit system on Guam. These recommendations included forming the Guam Mass Transit Authority and implementing high-capacity bus service on the island. In late 2009/early 2010, the Guam Regional Transit Authority (GRTA) was formed and will now be responsible for all public transit functions. The GRTA approved the Guam Transit Business Plan in January 2010, which includes purchasing new buses, constructing a bus maintenance facility, and modifying the bus schedule.

Please provide your comments below:

How will the little critters -particularly the coral be taken care of when dredging for the carrier pier? I think coral that grows so slowly and should be viewed as just as valuable as the potential economic impact of having carrier visiting Guam.

I-064-001

### I-064-001

Thank you for your comment. The location of the new Navy wharf was identified as the least environmentally damaging alternative, in efforts to avoid the live coral in the area. The proposed area to be dredged is mainly within a sand and rubble zone. Based on analysis provided in the EIS, impacts to subsistence fishing/collecting from the proposed action would be minimal; returning to baseline conditions after construction is complete. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. The Navy will implement mitigation measures and best management practices during in-water activities (i.e. dredging, wharf construction) to help lessen impacts to the marine environment.

The U.S. Army Corps of Engineers permits for in-water work will likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects. To compensate for the loss in ecological services of the coral reef ecosystem, upland reforestation (to improve nearshore water quality), artificial reefs (to provide increased fish habitat) or a combination these and other compensatory mitigation alternatives will be implemented by the Navy to comply with federal laws that protect coral resources.

Additionally, the DoD, as part of the "build-up" on Guam, will participate in the future upgrade of the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment if required by the EPA. This action alone will assist GWA in meeting its coastal water quality standards, providing benefit to sea life and people of Guam.

I-065-001

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in significantly fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO to mitigate any adverse effects to cultural resources and to provide information necessary to protect historically important archaeological sites.

Public Hearing 1/7/10

I-066-001

America needs Guam, Guam needs America. This, we all agree. The following statements are made to indicate areas of concern to address with the goal to find ways to *coexist*, have a *win-win situation* and live *harmoniously* in our very small island, only 4 – 8 miles wide and 30 miles long!

While flying out of Guam, I can see both sides of the island. When flying from Huston to D.C. back on December 1, I was struck by the difference and started to think how Guam can accommodate the needs of the military and to still be able to coexist and live harmoniously!

I-066-002

The federal government already owns about 1/3 of the island, with requirements for more land space for road construction, firing range in the north and the trail up Mount Lamlam in the south and for other purposes, it is sad to think that the people of Guam will be a *minority* in their land ownership.

I-066-003

With the anticipated drastic increase in population, it is also very sad to think that, in time, the *Chamorros*, as a people, will also be the *minority!*  
*I hope that the day will never come when the Chamorros will never lose their identity*  
In the interest of time and so others will have the opportunity to share their views, let me just give a summary of how the buildup will impact the island and the people of Guam and how we can have a win-win situation and live harmoniously.

I-066-004

Just briefly, the impact will definitely compromise Guam's culture, values, custom, and even the language. This is indeed a very high prize to pay. The Chamorros are once again called upon to endure the burden of patriotism and loyalty to America.

Since most of the funds for the buildup will be spent on base, how about the federal government doing the following:

I-066-005

1. On health care – all buildup related personnel should utilize the Naval Hospital, since the Guam Memorial Hospital can't accommodate the anticipated pollution.

I-066-001

Thank you for your comment.

I-066-002

Thank you for your comment. Our acreage estimates indicate that the federally-controlled property would increase by approximately 2-3% and the federal government would not have control over the majority of land on Guam. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the FEIS.

I-066-003

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance,

I-066-006  
I-066-007  
I-066-008  
I-066-009  
I-066-010  
I-066-011  
I-066-012  
I-066-013

2. On education - For the DoDea schools to accommodate all buildup related civilian students.
3. Compact Impact – Keep current the Compact-impact reimbursement
4. War Reparations – Give Guam what Congresswoman Bordallo is asking
5. On lands taken after the war – return or provide compensation.
6. Water resources – The military to pay 10 cents/gallon of water from any additional water wells
7. All military personnel who are declared as sex offenders will not be allowed to reside on civilian properties.
8. All military personnel breaking Guam laws are to be tried in the Guam courts.
9. Toxic/contamination around Guam - Clean them all up ASAP *show map*
10. Future contamination - None should take place, violators will be responsible
11. No land excavation/dredging that will alter the cultural or <sup>eco</sup> system of the island
12. Persons affected by diseases related to toxic chemicals from military activities are to receive financial assistance from the federal government, e.g. the Cocos Island PCB situation.
13. If there is the attitude that Guam was selected for the buildup because, “we don’t have to ask anyone,” somehow it would be appreciated if this notion will never, ever be felt or heard again.

In conclusion, if both sides demonstrate efforts toward a win-win situation, perhaps we can coexist and live harmoniously in our little but beautiful island!

*Teen Barzin at  
260 Chandler St.  
Santa Rita, Guam 96915  
585-5465*

language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-066-004**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DOD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

**I-066-005**

Thank you for your comment. Healthcare for military and Coast Guard personnel, their dependents, and qualified military beneficiaries (such as qualified veterans) would be provided for by the DoD dental and medical clinics and the Guam Naval Hospital. Construction workers (including H2B workers) would be provided healthcare benefits by DoD construction contractors. Civilian military workers and induced populations from the proposed action, such as people from Micronesia, may also migrate to Guam. This population may impact the public medical services and the Guam hospital. Because this population would

pay taxes, fees and licenses, and other money to the government of Guam, they would be support public services and facilities.

**I-066-006**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

As documented in the EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-066-007**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

**I-066-008**

Thank you for your comment. The issue of water rights and any payment for withdrawing water from the aquifer would be worked out with Gov Guam and DoD. Your suggestion is noted and appreciated.

**I-066-009**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts

and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-066-010**

Thank you for your comment. There are various chemicals (e.g, hazardous materials/wastes) that may be used by the DoD. However, when feasible, the DoD is committed to reducing or eliminating the use of various hazardous materials/wastes to the greatest extent possible and substituting them for less toxic substances. Hazardous substances (e.g., hazardous materials/wastes) that may be used include:

- pesticides and herbicides;
- fuels, oils, and lubricants;
- solvents;
- cleaning agents; and
- corrosives.

When using hazardous materials/wastes, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These

protective actions include, but are not limited to:

- comprehensive personnel training including hazardous substance storage, handling, use, transportation, and disposal requirements;
- hazardous substance communications standards that demand the use of material safety data sheets (MSDSs) and other communications tools to train and inform workers and emergency personnel of safe handling and storage, health and safety, and specific hazards posed by all hazardous materials/wastes in use at specific facilities;
- the use of various engineered solutions including secondary containment, leak detection and monitoring systems, the use of inventory records and use records, etc;
- use of hazardous material management plans (HMMPs), hazardous waste management plans (HWMPs), spill prevention, control, and countermeasures (SPCC) plans, and other related documents;
- waste minimization plans and the use of alternative, less toxic substances where feasible;
- proper transportation, handling, storage, use, and disposal of hazardous substances; and
- other related prevention and mitigation measures.

If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or

biota) sampling and monitoring to ensure that hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are generally considered.

These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, or other hazardous substances.

**I-066-011**

Thank you for your comment. As addressed in the EIS, some land excavation and dredging would be required to implement the proposed actions. Impacts and mitigation measures to reduce any adverse impacts are presented throughout the EIS with a summary discussion included in Volume 7 of this document.

**I-066-012**

Thank you for your comment. Volume 2, Section 17.1.2 discusses the laws and regulations that the Navy must abide by during operations (e.g., use and storage of hazardous substances) to ensure public health and the environment are protected. Hazardous substances are controlled by laws and regulations administered by the U.S. Environmental Protection Agency (USEPA), the U.S. Occupational Safety and Health Administration (OSHA), and the U.S. Department of Transportation (DOT). USEPA regulations focus on the protection of human health and the environment. OSHA regulations protect employee and workplace health and safety. DOT regulations promote the safe transportation of hazardous substances used in commerce. Additionally, the U.S. territory of Guam oversees and administers its environmental laws and regulations through the Guam EPA (GEPA). DoD installations

are required to comply with applicable federal, territorial (e.g., GEPA), and DoD laws and regulations regarding the storage, handling, and disposal of hazardous substances. The Guam Division of Public Welfare is responsible for a wide array of social services, administered through a number of different Bureaus including the Bureau of Social Services Administration, Bureau of Health Care Financing Administration, and the Bureau of Economic Security. The Division of Public Welfare promotes positive social conditions that contribute toward the attainment of the highest social well being for populations within the Territory of Guam. They administer payments and various social services to eligible individuals seeking the basic necessities of life including medical care.

**I-066-013**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

0002

January 7, 2010

MILITARY BUILDUP EIS-SOUTHERN HIGH SCHOOL

Sirs,

I-067-001

1. OFFSHORE SMALL ARMS FIRE ZONES-I have seen the proposed fire zones on a chart the represents most of our productive fishing grounds down south. Realizing of course that the exercises will only be conducted periodically, common sense tells me that the exercises will be held in fairly calm waters which means for us fishermen, time to go bottom fishing. So, I see a conflict coming where I will not be able to bottom fish or be told when and where I can bottom fish or troll because of exercises. My proposal is go due west in the open ocean where we do not fish or go out to the east side of the island toward the Trench Monument.

I-067-002

2. DREDGE SPOILS DUMP AREA-I realize that we must have somewhere to dump the dredge material from the Carrier wharf expansion, so I would like to see as much of the dredge material used for back fill, concrete additive before ocean dumping is use. I am still not convinced that the western near shore pelagic fisheries and the spinner dolphin pods will not be affected by dumping of dredge spoils.

**I-067-001**

Thank you for your comment. Surface danger zones associated with proposed firing ranges on Guam are located over waters off the northeastern shore of Guam. West coast alternatives were considered but eliminated following advice of the office of the Governor regarding impacts to recreational activities and traditional fishing areas, which are prevalent on the west coast. This is described in greater detail in Section 2.3.2.5 of Volume 2.

**I-067-002**

Thank you for your comment. The DoD is considering several options for disposal of dredged material, including upland placement, ocean disposal, and beneficial uses such as shoreline stabilization, fill for berms, and fill for the Port Authority of Guam, as discussed in the EIS (Chapter 2, Volume 4).

While beneficial reuse is a priority for the DoD, the final decision on dredged material management will be made during the final design and permitting process. The United States Environmental Protection Agency is pursuing the designation of an ocean dredged material disposal site (ODMDS) and an EIS is being prepared. Should any of the dredged material be deemed suitable for ocean disposal, the DoD would comply with all necessary laws and permits, including Title 1 of the Marine Protection, Research, and Sanctuaries Act, in which the objective is to "prevent or strictly limit the dumping into ocean waters of any material that would adversely affect human health, welfare, or amenities, or the marine environment, ecological systems, or economic potentialities."

I-068-001

Thank you for your comment. Ground water rights are a very technical and involved legal issue that is beyond the scope and purpose of the EIS. Thus the DEIS does not discuss water rights. The proposed DoD expansion of its water system is being discussed with GWA and would be done with GWA and GEPA concurrence.

I-069-001

Land use issue? Firing Ranges  
- Leveling out of land, removing volcanic soil  
& limestone would represent a significant impact due to changing of topography has this been identified as a concern?

I-069-002

- Giving access to Agaña during non-active firing times does not guarantee much because we don't know how often it will be open. It could be almost never and we can not be guaranteed anything. This is a very important cultural site & needs to be available. MAJOR CONCERN

I-069-003

- Has the golf course on Andersen been viewed as an alternative

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-069-001

Thank you for your comment. Change in topography has been recognized as a potential impact to resources in the geological and soils chapters of the Draft EIS. Best Management Practices (BMP) will be used to ensure that minimal soil disturbance occurs as a result of firing range installation. It is not expected that a significant amount of soil will be lost or a significant change in topography will occur, hence the finding of no significant impact to geological and soil resources was determined.

I-069-002

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-069-003

Thank you for your comment. The DEIS describes the intensive selection process that the Department of the Navy went through to select alternatives for the location of the firing range on Guam in Section 2.3.2.5. First, planners examined all DoD lands on Guam. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (such as housing, Won Pat International Airport), the firing range could not be placed on DoD lands, including the Golf Course on Andersen AFB.

Additionally, placing the firing range at the golf course on Andersen AFB would be in direct conflict with the special use airspace associated with the airfield at Andersen AFB.

Water Use Issues  
- DoD should re-claim contaminated water for use before drilling new wells in the Northern Aquifer.  
- How much water is currently contaminated & could be re-claimed? Is this a viable option.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-070-001

I-070-001

Thank you for your comment. DoD considered water reclamation and rehabilitation of contaminated wells in the July 2008 Guam Water Utility Study Report for Proposed USMC Relocation. The following options were evaluated:

- Option 2: Rehabilitate, Replace, or Treat Well Water from Existing Wells that Are Not Currently in Production Due to Contamination, Structural, and/or Mechanical Problems
- Option 6: Reclaim Potable Water through Effluent Reuse
- Option 7: Indirectly Reclaim Potable Water through Groundwater Recharge

A brief description of these options is provided in Volume 6 Section 2.2.3.4 and 2.2.3.5 of the DEIS.

Option 2 was retained for further consideration. Several Navy owned wells have been identified as having biological contamination or elevated salinity. The Navy continues to rehabilitate or replace wells that are unusable due to contamination, structural or mechanical problems. Rehabilitation of two Air Force owned wells with chlorinated solvent contamination was considered for use by the USMC base. Marbo #2 and the Tumon Maui well have a combined pumping rate of 1.76 MGd. This option was not carried forward because both wells are located in the Yigo subbasin which is estimated to currently contain wells having a daily average pumping rate which exceeds the 1991 sustainable yield estimate for this subbasin. Full implementation of Option 2 would yield approximately 4 MGd. Even with full implementation of this option, additional wells are required to meet the UFC design capacity of the wells for the USMC base (10.5 MGd for Main Cantonment Alternatives 1 & 2).

Options 6 and 7 were not retained for further consideration. Both options describe means of reusing wastewater collected from the USMC base and treated. In Option 6, the treated, potable water is returned to the main water supply for reuse. In Option 7, the treated wastewater is injected through wells to recharge the aquifer. Although reuse of wastewater would yield approximately 8.8 MGd, both options were eliminated due to technical, administrative or public perception issues.

I-072-002

I-072-003

Unfortunately the military presents  
everything, life not much is changing,  
but having lived here the military  
changed a lot the last 20 years here  
in Guam. We are no longer able to go  
to Spanish Steps, a most beautiful  
spot on this island. Now we are  
promised that we do not need to  
worry about Pagat Cave or Mt.  
Lam Lam. It will only be closed  
sometimes that is not true. It will  
be closed permanently - just like  
Spanish Steps. The people in  
Guam have no power of what they  
want to see on this island they  
want to see a decrease not an  
increase.

Hi ILL Just get straight to the point. continue the overpass. it would certaf help prevent traffic and accidents. Even without the overpass we really do have traffic problems. Thankyou Jeanette Quinata

I-073-001

Thank you for your comment. The new highway that you mention was a concept that would connect Navy facilities near Apra Harbor with Andersen Air Force Base. The proposal had been included in previous planning documents and was conceptually evaluated in the development of the 2030 Guam Transportation Plan. This route would primarily serve as a transportation corridor for only the military, would be very impactful to the environment and would be very costly to construct. In order to benefit Guam's roadway network and make better use of limited funds, DoD and the Federal Highway Administration (FHWA) plan to improve existing routes instead.

Please provide your comments below:

I am a 15 year old teenage girl, who disapproves of this Military Build up. I currently live in the village of Umatac and I've heard that this build up is planning to use the highest mountain on Guam, which is Mount Lamlam, for training purposes. I haven't lived on this island that long but I've lived on it long enough to call it my home, and I wouldn't want to pass by Mt. Lamlam and see that our beautiful mountains and hills are used for training! These mountains are the most beautiful land forms we have in the south and I wouldn't even want to see people doing work up there daily! Honestly, coming to this military build up meeting here at Southern High School made me feel so mad, angry, sad and scared! I felt mad and angry because I looked around and saw that all the people that are talking to the public and telling them what this military build up would bring to Guam, are not even from here! Knowing that makes me so angry because how the hell can they say that this build up is good? They can't even pronounce the name of the villages right for God's sake! I hate the fact that these people who want this build up came up with the idea! I feel scared because no one can tell the future and who knows what the outcome of this build up would bring. People who want this build up are just expecting good things to happen, they don't know for a fact if everything would turn out good, but what I know is

\*\*\* Please Print Clearly \*\*\*

Comments must be postmarked by: February 17, 2010 Eastern Standard Time

Thank you,  
Sincerely,  
Teresa Santos

that I wouldn't want to risk my island my home for money or jobs and I know that if this build up comes, this small island would soon be DESTROYED!!!

I-074-001

Thank you for your comment. The information that the military would be using the top of Mt. Lamlam (also known as Mt. Jumullong) for training is not correct. The Draft EIS (Chapter 2, Volume 2 of the DEIS) identified the existing Naval Munitions Site (NMS) for military training. However, the proposed project does require access to the NMS via the trail to Mt. Lamlam. What is being considered is that the existing foot trail with an area that is about 30 feet on each side of the trail being acquired. The proposed access (road) has two action alternatives. The first is that it would remain as is and used to access the NMS (the preferred action); the second is that the trail be paved. To provide access to the NMS, the DoD proposes to negotiate a purchase, lease, or easement with the landowner. It is the intent of DoD to maintain public access to Mt. Jumullong Manglo (including the portion of the trail that leads to Mt. Lam Lam) consistent with safety and operational requirements. Final plans concerning access to Mt. Jumullong Manglo (that also provides accessed to Mt. Lam Lam) have not been developed, DoD looks forward to working with stakeholders including groups that use the area for traditional religious activities to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of this site.

I-074-002

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

To minimize the stresses on local water resources, it is suggested that all military entities, including military personnel, obtain water via seawater desalination rather than directly from the island ground or surface freshwater sources.

**I-075-001**

Thank you for your comment. Desalination of brackish water was considered as an alternative but was not the preferred alternative due to high costs driven by energy requirements, handling of the resultant concentrated brine wastes, and maintenance, and since it could not be installed soon enough to meet near-term potable water needs. It has been retained as a potential long-term alternative should the basic alternative of additional groundwater wells prove to be inadequate. With adequate sustainable yield available from the northern Guam lens aquifer, additional ground water withdrawal capacity appears to be the most economical alternative.

DoD has a well run water system including the surface water source from Fena Reservoir and would not desire to replace that entire system with desalination. That would be a major unnecessary expense in both treatment and distribution/storage and would not be justifiable.

DoD recognizes that the current GWA water system needs attention. DoD would become an advocate for grants and low-cost loans to GWA for implementing needed maintenance and upgrades to the GWA water supply and distribution systems, in addition to making excess water supply capacity available to GWA if needed. GWA has a current program to locate water leaks. In the first year of this 3 year project, about 4 million gallons per day of leaks have been located. Hopefully GWA will repair those leaks soon and continue to find additional leaks in the next 2 years. The current unaccounted for water exceeds 50% in the GWA system.

We suggest that a US government subsidized fund be established as of one billion US dollars to be made available for immediate use in the case of a major environmental catastrophe on, or in the surrounding waters of, Guam. This fund will grow annually to keep pace with inflation.

I-076-001

#### I-076-001

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 85

Received: 1/7/2010 6:03:52 AM

It is suggested that the military use wind and solar energy to meet 50% of the military needs to minimize impact to local resources.

I-077-001

#### I-077-001

Thank you for your comment. Wind and solar energy are methods to offset use of conventional hydrocarbon fuels (predominantly oil in Guam). These sources were considered for the increased electrical needs for the proposed DoD buildup. However, these sources are not suitable for base load demands as they are intermittent. There must be a reliable generating capacity in place, then these types of intermittent sources can be utilized to offset hydrocarbon use. Thus they were discarded as viable alternatives for such base load supply.

Solar power sources are being considered in the proposed new base for domestic hot water and potentially photovoltaics. Also proposed buildings are being oriented for optimum solar applications for potential future applications and reductions in air conditioning requirements. Photovoltaics needed to provide a high percentage of power requirements would also require a large area of land as noted in the DEIS (Volume 6, section 2.1.3.5).

As for wind, as stated in the DEIS (Volume 6, section 2.1.3.4), at the Guam airport the windspeed reaches a class 2 in a scale of 1 to 5 (with 5 being the best). A class 3 is considered the minimum necessary to prove cost effective. Also wind farms require a lot of land. Typhoon resistance would also be a major concern. Thus wind energy does not appear to be a viable approach on Guam.

The highest form of renewable energy is elimination of need. To this end, the DoD proposed buildup would use sustainable methods and conservation techniques to achieve LEED Silver status. It is estimated that at least 10% energy savings will be realized through these efforts and potentially more. Such measures would include economical lighting, building insulation, energy star appliances, optimum building orientations, building shadings, automatic lighting and air conditioning controls, cool roof systems, along with water and wastewater

conservation measures that also translate into energy savings.

Alternative energy initiatives would be implemented over time to achieve current and future alternative energy mandates.

Since the storage of hazardous materials and fuels pose a continued risk of contaminating surface water from leaks or spills, it is suggested that fuels or hazardous materials be stored only in locations that may threaten contamination of ground or surface water that may be used for drinking or irrigation.

I-078-001

#### I-078-001

Thank you for your comment. To the extent practical, DoD seeks to store fuels or hazardous materials in less environmentally sensitive locations. In addition, there are various procedures, protocol, and directives that are implemented to minimize the occurrence of inadvertent leaks, spills, or releases. These actions include, but are not limited to: personnel training for the handling of fuels and hazardous materials; the use of various engineered solutions including secondary containment, leak detection and monitoring systems, etc.; the use of spill prevention, control, and countermeasures (SPCC) plans and hazardous materials management plans (HMMPs); minimization of hazardous materials and the use of alternative, less toxic substances where feasible; proper transportation, handling, storage, use, and disposal hazardous materials protocol.

I-079-001

It is suggested that all dredging activities utilize trailing suction hopper dredging techniques to minimize sediment suspension, as opposed to using Grab dredging, Backhoe dredging, Water injection dredging, Seabed leveling methods, or mechanical dredging using a traditional clamshell bucket.

#### I-079-001

Thank you for your comment. The EIS states that mechanical or hydraulic dredging or a combination of both could be used for any proposed dredging activities associated with the proposed action. The differences between the environmental effects of mechanical and hydraulic dredging are discussed in Chapter 2, Volume 4 and Appendix D of the EIS. Mechanical dredging involves use of a clamshell or fixed bucket that excavates the dredge sediment from the harbor floor and then carries the sediment in the full bucket through the water column before lifting the bucket out of the water and placing the dredged sediment in a nearby barge or scrow. During this movement, a small fraction of the collected sediment will escape from the bucket and create suspended sediment in the lower and higher levels of the water column. On the other hand, a hydraulic dredge works solely on the harbor floor and any suspended sediment will emanate only in the lower portion of water column. As a result, the plume of suspended sediment is generally greater with use of conventional clam shell bucket as compared with a hydraulic dredge. However, use of hydraulic dredging is generally limited to soft bottom sediment on relatively flat surfaces. Mechanical dredging, which has historically been used in Apra Harbor, was chosen as the dredging method for evaluating environmental impacts as it presents the most adverse impact scenario. A sediment plume is an inevitable effect of in-water construction activities. The Navy proposes to minimize sedimentation by using best management practices such as silt curtains and operational controls of dredging equipment. Final mitigation measures for all dredging activities will be determined and agreed upon during the permit phase of the projects.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 88

Received: 1/7/2010 6:06:24 AM

It is suggested that water (sea and ground/surface water), air (noise and other pollutants) quality be monitored daily to ensure that contaminants do not exceed minimum acceptable levels.

I-080-001

#### I-080-001

Thank you for your comment. Environmental laws and regulations that must be followed by DoD are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates such as, but not limited to:

- personnel training; hazardous substance storage, handling, use, transportation, and disposal requirements;
- use of various engineered controls to prevent the release of hazardous substances such as secondary containment, leak detection and monitoring, inventory records, sampling and analyses, and other related measures;
- use of hazardous material management plans (HMMPs), hazardous waste management plans (HWMPs), spill prevention, control, and countermeasures (SPCC) plans, and other related documents; · hazardous substance transportation, use, handling, and disposal requirements and protocol; and
- other related prevention and mitigation measures. If a release or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the spill or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater,

surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of the plan to remediate such sites includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are generally considered.

## COMMENT SHEET

Website Comment Number: 89

Received: 1/7/2010 6:08:39 AM

I-081-001

Regarding threatened or endangered species, green and hawksbill turtles are known to utilize Apra Harbor, it was noted that "there are few records documenting use of beaches for nesting in this area" and that "Impacts to these species would be less than significant". The fact that they are an endangered species suggests that any disruption to their breeding habits would be significant. Any beaches with any record of these animals nesting should not be used for any purpose by the military.

#### I-081-001

Thank you for your comment. The proposed action within Apra Harbor (an active commercial and DoD port) has been evaluated in the EIS and it is the Navy's opinion that our action will not significantly impact the federally protected green or hawksbill sea turtles with implementation of mitigation measures. The Navy is currently in consultation under Section 7 of the Endangered Species Act with NOAA on this issue and will comply with results of this consultation. The Navy currently implements standard operation procedures, mitigation measures and BMPs that consider federally protected species and their well-being. The Navy has co-existed with sea turtles in the Harbor for over 60-years and the Navy, in a partnership with the Fish and Wildlife Service, monitors sea turtle activities within Apra Harbor and around Guam. There are no records of sea turtles nesting on beaches within Apra Harbor that would be impacted by the proposed action and there have been no reported observations of sea turtles grazing within the area to be dredged. As shown in Volume 4, Figure 11.1-18 and described in the EIS, Section 11.1.4, there are only three active nesting areas in Apra Harbor and are reported over 3,000 m away from the proposed activity. The closest historic nesting site (has not seen activity since subjective reports in 1997) is Sumy Cove, which is approximately 150 m away (Alternative 2) and 300 m (Alternative 1) from the proposed action. There are no sea turtle migration patterns in Apra Harbor and forage areas are not limited to Sasa Bay. The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction) to lessen any potential impacts to sea turtles and sea life in general. Additionally, the Army Corps permit will require measures to protect biological resources. These measures may include the following: biological monitors on vessels (making sure sea turtles and dolphins [although rare in Apra Harbor] do not approach the area); halting of dredging activities, if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area, low lighting, and as described above, joint

Navy/Guam Resource Agency monitoring of nesting beaches though out Guam, to name a few.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 90

Received: 1/7/2010 6:09:27 AM

I-082-001

It was noted in the report that "To further protect sea turtles, the contractor performing work in Apra Harbor would be directed to stop work when there is a positive visual sighting of a turtle anywhere near the project. The contractor can resume work fifteen minutes after the turtle submerges and is no longer seen." It is suggested that this time is doubled or tripled since it is possible that the turtle resurfaces outside of the line of sight of the worker, but still within close proximity to the work being performed.

#### I-082-001

Thank you for your comment. This suggestion will be evaluated for inclusion as a special condition in the USACE permit for Apra Harbor construction/dredging. The Navy will abide by all conditions of the final permit and, in addition, results of the ongoing Section 7 ESA consultation with NMFS.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 91

Received: 1/7/2010 6:10:07 AM

I-083-001

The report noted that "the continued development of northern Guam has resulted in once undeveloped areas being sealed with impervious materials (houses, roads, and parking areas), thus preventing or severely reducing groundwater area recharge rates. This change in land cover also generates large amounts of runoff during storm events. To manage this increase in surface water runoff, municipal rainwater collection and conduits have been installed to direct rainwater into sinkholes where the water rapidly percolates to the groundwater; however, data indicate that this storm water often contains pollutants, which then negatively impacts groundwater quality (Navy 2009)." Considering that the buildup would substantially increase the development of the island, what steps is the Navy taking to prevent exacerbation of the aforementioned problem?

#### I-083-001

Thank you for your comment. DoD and regulatory agencies are equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from stormwater runoff. Construction of new facilities will use Low Impact Development (LID) principles to the extent practical. LID is a design philosophy that seeks to reduce the impact to the environment from new construction projects through the reduction of impervious surfaces. LID's principles incorporate the design of facilities with the use of native vegetation, pervious (porous) surfaces to reduce storm water runoff and encourage recharge of groundwater, and water conservation. DoD is currently conducting a LID study that will identify specific types of alternative designs that can be incorporated into the construction of facilities associated with the buildup. DoD is also preparing a stormwater pollution prevention plan (SWPPP) and will apply for permits that regulate stormwater discharges during construction. The permit and plan is focused on reducing the amount of earth and soil that is exposed to stormwater during earth-disturbing activities (such as land clearing and grading), providing stabilization of soils during construction through the use of ground covers, and sediment ponds and traps/screens to reduce pollutants getting into storm runoff and from percolating into the ground. These plans also have specific requirements for containment of potential pollutants at construction sites (such as storage areas for equipment fuel). Lastly, DoD is developing a construction and demolition (C&D) waste management plan in concert with the stormwater construction plan that calls for the use of mulch on exposed soils, mulch that will be generated during the clearing of trees and low growth during land clearing activities. Once construction is complete, a SWPPP will be developed to control stormwater runoff and infiltration from base operations. This is being done on a regional DoD Guam-wide scale, and has the involvement of Guam EPA.

I-084-001

Hello! My name is Raylynn Ignacio. I am a 15 year old student of Southern High. I reside in the village of Agat and I'm against the military build-up. The military build-up is big deal to me because there are so many things that shouldn't be done, but you want it to be done. This is our island and many families live here. The least you could do is give us a chance to have a say in this. Bringing 79,000 more people would only cause chaos. Traffic is bad on Guam already. Just to get to school is hell. Being late to school affects me and many others. You can't expect the people you bring to just stay in base. Eventually, their going to want to explore Guam. Every person who resides on Guam should have a say in this. Especially, the younger generations because its going to affect us the most. It doesn't matter what we gain out of the military build-up. Its what we lose. With this happening, we lose big time and some just don't notice it. The military owns most of the island of Guam. From what I've heard, you guys want more. Could you face us and tell us whats left for us? Pretty soon we won't be allowed on our own island. Were all hurt by this. You guys just don't feel our pain. Some people are for the military build-up because they see money for Guam. Their brains have been bought. Their not thinking about whats more important. You guys also want to remove ancient artifacts from its home. Those artifacts are the only thing that keeps our chamorro culture alive. Moving them would just make them seem like nothing. My main reason for being against the military build-up is for what happened in Okinawa. A girl got raped. Actually, there were many cases of rape there and they all involved the military. Those cases weren't dealt with properly. Could you assure us that whatever happened over there won't happen over here? I really hope you take this seriously. Please resond back to the people of Guam, but respond back with true words. Give us a chance to speak and we will give you a chance. We all need to come to and understanding.

Thankyou.

### I-084-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

## COMMENT SHEET

Website Comment Number: 94

Received: 1/7/2010 7:44:35 PM

I-085-001

Guam has a history full of historical, cultural, environmental, and economic challenges and changes. The U.S. military, regardless of service, must strive to limit the environmental impact and footprint; especially concerning preservation of historic and cultural landmarks. Certainly, a firing range could be fitted into an area on the existing Navy Base that mitigates or eliminates destruction or obstruction of Guam's landmarks and environment. To do otherwise is simply inferring that Guam and its national inhabitants and cultural landmarks are merely expendable toward external ends. I strongly urge you to evaluate alternative plans, even at greater costs, to preserve the islands landmarks. This alone will have a positive impact toward island and strategic relations.

#### I-085-001

Thank you for your comment. The EIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing ranges on Guam. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties including the range area. Thus, the vast majority of impacts to resources were avoided. In addition, multiple historic property surveys have revealed that there are no known historic properties within the proposed construction footprint of the proposed ranges.

I-086-001

The Guam Raceway Park facility has been a dream of Guam motorsports enthusiasts for generations. Through the hard work of individuals and businesses it finally became a reality. It is my understanding that the military is proposing to take this land as well as hundreds of acres of nearby land used for other types of recreation. I find it hard to believe that it would simply be taken away but, if not, why were plans to replace the facility not addressed in the EIS?

I-086-002

I believe, for the most part, the people of Guam are supportive of the buildup and will continue to be as long as the military makes a genuine effort at being a good neighbor. It is understood by all that sacrifices will have to be made in order to accommodate the military buildup but there are limits to our understanding. Unless the military wants the same social problems in Guam that were created in Okinawa they need to be more concerned with their relationship with the local population. A huge step in this direction would be a thorough explanation of how local motorsports enthusiasts will be accommodated should it be necessary to take the GRF racing facility. Will a new facility be built? Will a "shared use" plan be developed? What will be done to ensure that the millions of dollars invested in this facility are not wasted? We need some answers and assurances. The silence is deafening and early signs of hysteria are beginning to show amongst the motorsports community.

The foundation for the future relationship between the local and military populations in Guam are being formed now. As they say, "you only have one chance to make a first impression". Dont mess it up.

I-086-001

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

Margaret Taitano (Taitano stands for "No-Land")  
From Dededo

I am a retired federal employee. My main concern about this EIS is that it really affected me socially, morally, environmentally, name it. I am one of those 3000 employees that was let go because of the military downsizing here in Guam in 1998. They started the downsizing mode in 1995, the incident that happened in 1995 in Okinawa when those three Marines raped the 12 year old girl, the Okinawa sentiments was that they want the military out. From my understanding there is a treaty between Japan and the US signed in San Francisco in 1951 that they have whatever property damage that they have they have to pay, and that has not been addressed. I am for the military that is right not, however I am against the buildup that is for all the issues that have not been addressed. The thing that really hurts is that of those 3000 employees, none of the local leaders here, they lost their retirement immunity. Because if they retire before the age of 55, then they lose it. There are people whose houses are being foreclosed, divorce, because they have no recourse as to fall back to the local government. The local government cannot help. During the time of the Vietnam, the local have nothing to say about this because the local leaders are supposed to help us. But the military has the foresight that since they are not liked in Okinawa, they are looking for the most likely place, which is here in Guam. During the time of the Vietnam War I saw truck loads of trucks going from Naval Magazine to Andersen. AT that time, nothing was being done- about the potholes. Since that time we have had problems with the highways. Nothing has been addressed. If the local government and the military would have had a good relationship, the US government wouldn't be spending so much money for what we are now doing for this EIS.

### I-087-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-087-001

I-087-001

We have a high incident of cancer here in Guam. They found out that Guam is a down winder to be included in the radiation fallout. That has not been addressed. This all ties back to the world war. WE have a lot of contamination that has not been cleaned up. That is part of the reason why I am really concerned and those are the issues that have not been addressed. However, I like the military presence that we have right now, but not how the military buildup has to come here because they are not liked by other place. Whatever problems the two allies have, they should solve it. I am not only concerned about losing my retirement benefits, I have put in over 30 years of service, I am also a cancer victim.

I-088-003

First of all, I think communication to the public should be better, clearer, concise. I believe that this is a negative impact because it doesn't really benefit us as a people (of a certain status) because of work. I have a job that I am happy with so I won't benefit from the build-up. I believe that the only reconstructions that will be made will only benefit military personnel and not really locals as a people. I will have no access to a lot of land because it will be closed off. I believe my kin will not see certain areas of Guam, which I think they should. I believe the build up of 79,000 people is ridiculous over a four year span. I have to deal with traffic everyday. I have to learn to get in line a lot more. It is uncomfortable now and I believe that I will be stressing a lot more. It is just a negative move. I for sure will not see any money or opportunity.

**I-088-001**

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

**I-088-002**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-088-003**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the

proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

## WRITTEN TESTIMONY FOR MILITARY BUILD-UP

**I-089-001** Good Morning, my name is Juan Martinez Unpingco. I am 85 years old, a veteran of the military force, and a recipient of the presidential unit citation with 4 battle commendations. I having been living on Guam all my life and I am married to Fidela Sablan Unpingco, of whom we are blessed with 8 children. I reside in Barrigada and I am in support of the military build-up provided there is no land condemnation. Additionally, I am in favor of exchanging land of equitable value, or the leasing of property to meet the needs of the military build-up.

**I-089-002** The Department of Defense and the U.S. president should take into consideration the people of Guam for they are citizens of the United States and are entitled to all constitutional rights and the basic necessities of life, which include food, clothing, shelter, and medical care. The quality of life of all people living on Guam must be given the utmost priority to ensure the health, safety, and welfare of everyone including the military population. Guam's population in 2014 is anticipated to increase by 70,000 people due to the military build-up, which is a tremendous rise in Guam's population. The people of Guam deserve to have good health, access to health care, and to have a descent life in lieu of living in substandard housing, or being swept away from their property through condemnation. Thus, the people of Guam

**I-089-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-089-002**

Thank you for your comment. The Final EIS has been updated (Volume 2) to better address impacts on social services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-

**I-089-003**

have the right to: live, be educated, and have the freedom to enjoy living in their property that they either bought through their hard work, and "sweat", or inherited from their ancestors.

During World War II, the DOD and the U.S. took nearly one-third of the island's land through condemnation. Property owners were promised that their land taken would be returned after the war ends. However, not every landowner got their property back as promised. The community today fears that history would repeat itself in that any land condemned by the military would not be rightfully returned when the war is over.

Resolution No. 258-30, which has been introduced by Senators Guthertz, Cruz, Respicio, WonPat, and Barnes is one of the greatest resolutions made by the 30<sup>th</sup> Guam Legislators. Having been around long enough to witness the eminent domain (condemnation) of property taken from the native people of Guam during which the U.S. military took nearly one-third of the island's land, I have seen the pain that our native people have experienced in that many completely lost their property with unjust compensation. Sadly to say, many did not have the property owned by their ancestors returned to them, which they have rightfully inherited.

The ownership of property especially when someone sweats to buy it by working hard, or inheriting property through birth right is so

agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-089-003**

Thank you for your comment. Please see response to I-089-001.

I-089-003

meaningful and priceless. When this is taken away unjustly, it creates a deep wound that may never heal over time.

Now that I am 85 years old, I can honestly say that all through my life I had to work two jobs in order to feed my eight children and send them to college so that they can get out of the "poverty" level. Additionally, I have worked extremely hard to save enough money and sacrifice all my savings to buy property so that I can use this property for my livelihood and this has obviously paid off since it has been helping me to pay all my medical bills. Thus, the property that I own in Marbo Cave has indeed sustained my livelihood and I plan to deed it to my children upon my death. I anticipate that my children would do likewise and deed the property onto the next generation.

Thus, as one of the landowners in Marbo Cave, I am in support of Resolution 250-30 and I firmly am in opposition to any eminent domain (condemnation) of Guam land for the military build-up and/or other U.S. Federal Government purposes. I humbly request for all elected officials, the senators, the Governor of Guam, U.S. DOD, the U.S. President, U.S. Senators, and Congress to oppose any condemnation of land.

If it is without reservation that the military undoubtedly needs additional property on Guam for the military build-up, I strongly recommend other

options be taken other than condemnation such as exchanging land in Guam with another property in the U.S. that is of equitable value, or the leasing of property owned by Guam residents within its fair market value. By doing so, the people of Guam would join in uniting with the military community in supporting and welcoming the military build-up.

Thank-you for your support. Si Yuus Ma'ase.

  
JUAN M. UNPINGCO

Thank you for this opportunity to comment. My name is Steven S. Unpingco and I am a resident and landowner in Sasayan Valley, an area designated as proposed alternative sites for Live Firing ranges under the EIS.

I am neither in favor nor against the proposed massive buildup but I will keep an open mind. I may be inclined to support the EIS proposal provided there is no land acquisition by condemnation, and that the buildup does not inhibit Guam's ability to provide essential services and a safe, sound and healthy quality of life.

I-090-001

At the outset, land condemnation rekindles painful memories in Guam's history from post World War II to present. The EIS fails to address the contentious issue of land condemnation and there is no data on the impact that eminent domain proceedings would create. DOD has the moral duty to consider the history of land taking and to reflect on the dark chapter of land being taken away by coercion and oppression. This history is well recounted in Resolution 258 authored by Senator Judith Guthertz. Furthermore, according to the Senator, Admiral Bice from JGPO assured her when asked the pointed question of whether there will be any land condemnation, he replied, "the buildup will be within the footprint of the military bases."

I-090-003

In addition to cultural sensitivity, land condemnation is highly objectionable for the following reasons. First, DOD currently owns sufficient land that should be exhausted prior to condemning more land. Guam is not getting bigger in land size and land space is very limited. DOD alone owns more property than Gov Guam. The ownership of approximately one third (1/3) of Guam's total land mass provides sufficient land space for DOD to conduct live fire training activities. During peacetime in this pacific region, DOD owns huge tracts of land spread all over the island. Patti Point is

I-090-004

**I-090-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-090-001** suitable for a firing range because of its isolation, designation of marine preserves barring recreational and fishing activities, and the freedom of action to use base facilities without restriction.

**I-090-005** Second, the EIS dismissed DOD candidate sites for a firing range based on anticipated public concerns, the impact that Surface Danger Zones (SDZ) would have on recreational activities and traditional fishing areas on the West side. This concern under the EIS feasibility criteria should also apply to Sasayan Valley in the East under Proposed Alternative B (Firing Range Complex) where recreational and traditional fishing areas

**I-090-002** are also prevalent. Trolling for pelagic fish, shallow bottom and deep bottom fishing, spearfishing and casting along the coastline are pastime activities that the Valley offers with the abundance of various fish species. You do not see boat traffic only because there are no boat ramps and mooring facilities on the East side.

Recreational activities in Sasayan Valley are not limited to fishing, however, for many residents and tourists visit the caves, swimming holes and ancient Chamorro villages located at the Alternative B site. Hikers and joggers traverse the cliffline to the coastline to enjoy the majestic view of the Pacific Ocean and pay homage to ancient village sites. In the course of their trek, hikers often encounter wildlife and discover indigenous artifacts, potteries, caves, caverns and rock shelters where ancestors sought refuge from storms.

**I-090-006** Equally important to the public is the impact that explosive grenade and demolition ranges may have on the environment. What were the environmental considerations, if any? Is there any scientific study on any potential environmental degradation or possible lead contamination from these activities and its impact on soil,

### **I-090-002**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

### **I-090-003**

Thank you for your comment. Please see response to I-090-001.

### **I-090-004**

Thank you for your comment. Land acquisition issues have been addressed in our responses above. Details regarding land acquisition were covered in the FEIS Land and Submerged Land Use Chapter. Further detailed information on the land affected will be provided in the Final Socioeconomic Impact Assessment Study (SIAS) and Final EIS document. The SIAS is in Appendix F, Volume 9 of the Draft EIS.

### **I-090-005**

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. First, planners examined all DoD lands on Guam. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (housing, Won Pat International Airport), the firing range could not be placed on DoD lands. Other locations on non DoD lands were eliminated because of topography or settlements. Specific reasons why the firing range could not be located on the west coast at

- geological resources, groundwater lens and fresh water aquifer which is prevalent in the area. Is there a real environmental impact study on the effects that these activities have on wildlife, vegetation, maintenance of native ecosystems? What about the potential threat to aquatic life, habitat, marine communities and ecosystems? Any research on the effects of explosives in a high fire danger area?
- What management strategies does the EIS offer to mitigate the effects of the proposed activity and improve our environment?
- What about the legitimate concerns of noise levels and public nuisance caused by live fire training and aviation training in Anderson South? If Alternative B was selected, the proposed training activities will be much closer to Adacao Elementary School and the dense population of Latte Heights. Hand grenade explosions, machine gun fire, helicopters, humvees and transport vehicles will emit noise pollution that will impact the school and the residential community within close proximity.
- Third, query whether this buildup will allow Gov Guam to provide essential services and improve the quality of life for all. An abrupt and accelerated population growth of 267,665 by 2014 in an island so limited in size may be very problematic. This unprecedented surge poses serious challenges on how the local government can provide critical public services relating to health, education, public safety and the general welfare of all people, including the military. There will be a need for more public health centers, schools, law enforcement entities as well as increase in personnel, equipment and supplies for the delivery of basic government services. Pursuant to this massive buildup, Guam is largely responsible to secure financing to help carry out its off base projects and programs related to the buildup. At a time when the Government is operating under a

Finegayan include the following. There was concern that the amount and location of submerged land that would be encumbered by the SDZs generated by the ranges on the west coast would be an unacceptable impact on recreational activities and traditional fishing areas, which are prevalent on the west coast. Secondly, higher density civilian development in vicinity of ranges increases risk of encroachment.

#### I-090-006

Thank you for your comment. The DoD and regulatory agencies are equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from potential contaminants. Refer to Volume 9, Appendix D, Project Description Technical Appendix, Munitions, for a discussion of the munitions and constituents of concern associated with the proposed ranges. Range designs include targets with physical barriers behind the target, such as an earthen berm, that are designed to stop and contain the spent round. Best Management Practices (BMPs) are used to further contain spent rounds, fragments and materials from weapons firing, and reduce any impacts to the environment. The proposed ranges will be designed and maintained in accordance with all applicable federal and Government of Guam regulations. Specifically, Military Handbook 1027/3B contains procedures for reducing potential impacts from ranges through the implementation of BMPs. These include introducing soil amendments, vegetation management, engineering controls, instituting contaminant monitoring, reclaiming, and recycling. With ranges, lead is the primary leaching contaminant of concern and best management practices can minimize or prevent leaching of this constituent. Impact rounds from pistol rounds generally stay intact and impact rounds from rifle rounds often fragment. Intact rounds and rounds fragmented into relatively large pieces are not easily transported by natural transport mechanisms (such as groundwater) and are largely contained within the berm or

0064

I-090-013

deficit of approximately 490 million dollars coupled with the estimated costs of the buildup of 6.1 billion dollars, Guam will be financially insolvent to meet the buildup requirements of roadway improvements, to link the commercial port to the military bases, power and water infrastructure, port expansion and expansion of public health and social services.

Guam needs funding sources and revenue streams to defray or underwrite the substantial costs of the buildup. Guam needs more than just consultants providing technical and financial services. Guam needs guaranteed funds to fully or substantially subsidize the costs of the buildup requirements – nothing more, nothing less.

I-090-014

Turning back to the issue of land condemnation, it is not the Politicians, DOD, Corporations and A&E firms that will incur the adverse impact of this buildup. It is the private landowners who detrimentally rely on their property for their livelihood. It is the landowner who leases his property to produce income or borrow against in order to meet life's many challenges. It is the landowner who is gravely ill who needs to pay his medical bills so he can live the next day that pays the high price of land condemnation. It is the landowner with families who wishes to subdivide his property or deed his property so that each child can make a decent living. It is the farmer who needs to put food on the table or sell his crops to pay tuition fees and day care services. It is the landowner who has to pay for the most useful tools in life – a college education – for each child. These are just some of the many more people that will suffer the devastating impact of land condemnation.

I acknowledge the purpose and need for the buildup and appreciate the bilateral relations with Japan under the Treaty requirements. I am aware of the need for global

- 4 -

physical barrier where they can be recovered and disposed. Through the proper design of ranges, application of BMPs, and monitoring, the potential for groundwater contamination would be minimized. BMPs can reduce or eliminate the leaching of lead to the environment. These procedures include controlling soil pH to between 6 to 8 to prevent dissolution of lead, mining of lead from back stop berms, implementing a soil leaching monitoring program, and adding phosphate containing soil amendments to bind dissolved lead to the soil. Prior to building the ranges, an engineering study would determine the minimum depth of soil cover to ensure sufficient soil cover of the limestone, and to assess the suitability and optimum technique to add soil amendments such as phosphate to prevent lead leaching. In addition, when percolating water reaches the porous limestone the pH will increase, encouraging the precipitation of lead out of solution. The DoD will monitor for selected contaminants of concern. If monitoring identifies significant impacts, such as indications that chemicals of concern may exceed regulatory standards, reduce beneficial uses, result in adverse human or environmental health effects, or conflict with federal or Government of Guam regulations, then additional action would be taken to address these impacts. Furthermore, the EIS will be revised to explain how volcanic basement rock protrudes up through the limestone of the NGLA, thus separating nearly all of the proposed ranges from groundwater supply wells. The low permeability of the volcanic rock acts as a barrier to groundwater movement. A figure in the EIS will support this text description.

I-090-007

Thank you for your comment. Up to 27 acres of disturbed secondary limestone forest would be removed to construct the grenade training area. There are no threatened or endangered species or other sensitive species present in the immediate vicinity of either of the proposed grenade range sites so there would be no impacts to these. As described on p. 10-94 of Volume 2, there would be increased use of the existing

repositioning and operational requirements so that the U.S. may mobilize quickly to meet contingencies around the world, whether to engage an enemy in hostilities, provide peace keeping missions or disaster relief.

I-090-015

Although our national security interests are compelling, that does not mean that the U.S. could not strike a balance and recognize that Guam's local interests are equally as compelling. A lesser restrictive alternative to land condemnation is land lease and/or land exchange. This equitable option will not deeply polarize our community. It serves both the interests of DOD in advancing the buildup and Guam's interest in providing essential services and a safe, clean and healthy environment.

I-090-016

President Franklin Roosevelt in his last inaugural address after the years of war, casualties and the enormous sacrifices said, "We have learned to be citizens of the world, members of the human community."

I wish to prevail upon the benevolence of the United States of America, please do not condemn any more land. Lease or exchange so we may all live in peaceful co-existence as members of the human community.

Thank you and may God bless the United States of America and our island of Guam, our families and our future.

  
Steven S. Unpingco

Andersen AFB Northwest Field demolition facility use is expected for one event per day up to 25 days per year. Noise levels that could possibly be a concern for wildlife would be increased over a total of 1,385 acres under the proposed action. As explained on the page noted above, to evaluate this potential, monitoring of the species in areas surrounding the demolition area would be conducted to determine potential noise impacts. If this monitoring determined that the fruit bat (the only endangered species currently present in the area) was being affected, techniques to reduce noise generation, such as noise barriers, would be employed.

**I-090-008**

Thank you for your comment. As identified in the EIS and referenced documentation, an impact analysis identifying effects the proposed action and alternatives may have on 16 resources was performed, including those listed by the commenter. In regards to "threats to aquatic life, habitat, marine communities and ecosystems" this also is described in detail in Volume 2, Section 11.2.2.2 Non-DoD Land. In summary, the potential for range training activities to lead to Level B harassment as defined by the Marine Mammal Protection Act (Section 11.2.1.2), or impact the Endangered Species Act-listed sea turtle would be negligible. There would be limited potential for ingestion with implementation of avoidance and minimization measures (see Section 11.2.1.1), including the use of "green bullets" and periodic benthic cleanup, to decrease potential impacts. Due to the inert quality of the munitions, there would be negligible effects to "marine aquatic life, habitat, and marine communities and ecosystems.

**I-090-009**

Thank you for your comment. Proposed fire management activities are discussed in the EIS. A Fire Management Plan is being prepared and will be in place (with the appropriate protocols for monitoring fire conditions, ensuring proper equipment and personnel are available, and appropriate

cooperative agreements are in place) to address potential fire concerns during military training. Volume 2, Sections 3.1.1.4 and 3.2 provide a discussion of the history of fires on Guam as well as an analysis of wildfire concerns.

**I-090-010**

Thank you for your comment. Potential mitigation measures are presented in the impact analysis portions of each volume and are summarized in Volume 7.

**I-090-011**

Thank you for your comment. Under Alternative B, noise levels at some areas of Latte Heights and Adacao Elementary School would increase and could be within moderate noise complaint risk areas. Several mitigation areas are proposed. Foliage and Barrier Attenuation would reduce noise impacts associated with the Route 15 firing ranges. Adaptive program management would alleviate construction noise. Volume 2, Chapter 6.2.8 has been revised to include these mitigation measures and presents the effect of the mitigations.

**I-090-012**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-090-013**

Thank you for your comment. Please see response to I-090-012.

**I-090-014**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-090-015**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The FEIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the FEIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally,

the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-090-016**

Thank you for your comment. Please see response to I-090-016.

0071

Statement by John S. Unpingco

Ladies and Gentlemen,

I-091-001

Ladies and Gentlemen, General Bice, I come before you today not as the former Chief Judge of the District Court of Guam, but as one of the landowners in Sasayan valley. I am a disabled veteran and proud of it. I would like to address some concerns which I have regarding the second preferred site for a Marine Corps small arms shooting range in Sasayan. Because time is very limited I will list my major concerns and then ask you to consider a couple of other sites for the location of the firing range. If the sites I am suggesting are a no-go, then I would suggest leasing as opposed to condemnation.

1) Noise pollution. The sound of rifle firing can be heard a long ways of f. Imagine 50 of them or even a hundred going off at the same time. A machine gun is worse. And, we must not forget that there is something called inverse condemnation i.e. where the noise pollution is so bad that you have in effect condemned the adjoining lands.

2) The land being taken is too large. Build berms to suppress the noise, to catch the ricochets, to lessen the amount of space necessary for SDZ's, Surface Danger Zones,

3) Ordnance related fires have the potential to devastate the area. From a safety perspective, what roads would be used by the firetrucks? Protocols for firing tracer rounds are mentioned but not how they are to be enforced.

Have you considered alternate sites? Sites such as Aguijan island right off Tinian or Maug island, the northern-most island in the archipelago? Both of these islands are uninhabited. Aguijan island would seem to be ideal. There are currently plans for a rifle range on Tinian. See volume III of the draft EIS. The training on Tinian is supposed to be monthly, air travel has already been planned from Guam to Tinian, why not make the rifle range dual purpose, be the basic course such as would be given on Guam and the follow up course given there as well. Schedules can be adjusted. Or, let it be the place where the Marines spend the night prior to going to Aguijan to do their basic portion of the course? The Marines would be in an expeditionary mode, that is they would bring all necessary equipment, and remove it all following their bivouac. This is already in the draft EIS. The draft EIS statement even allows for a leachate to distill the human wastes of these soldiers on Tinian.

I do hope that you will consider the off-island alternatives. Maug, another uninhabited island in the Mariana archipelago is a suitable spot. Its position far to the north, makes it a great candidate.

I do hope that you will consider the off-island alternatives I have discussed. If they do not pan out then consider leasing instead of condemnation. Thank you very much.

John S. Unpingco

## I-091-001

Thank you for your comment. Marines stationed on Guam require annual qualification or requalification on individual and crew –served weapons to maintain their combat readiness. Every Marine on Guam will require this type of training. This high volume can only be met with ranges located in close proximity to cantonment areas. It would be cost prohibitive to move every Marine to an off island location to meet these reoccurring training requirements.

Other locations were considered and eliminated because they did not meet the criterias indentified for the firing ranges. Also, locations of existing firing ranges were also reviewed and did not meet the criteria for firing ranges.

January 9, 2010

Haia Adai, My name is Rick Unpingco, a landowner at Sasayan Valley identified as Rte 15 lands, Option B in the EIS. Please let me start out by saying that I am supporting the military build up. It is good for the economy, good for business and we can use the military money to improve our infrastructure.

However, there are certain portions of the Draft EIS that I object. I here in Opposition to Military Locating its Live Fire Ranges and would like to point them out in bullet items.

- I-092-001** • Past history of land taking without compensation. My family has experienced this after the Japanese occupation.
- I-092-002** • Firing Range is required for live and inert munitions practice which generates the need for Surface Danger Zone (SDZ) and Special Use Airspace (SUA).
  - Limited indication in the draft EIS where these SDZ's and SUA's are, what ground they cover, only that these are going to be on the water. See Table 2-8.
  - But, if they are to be on the water, need to know them so that sport and recreational fishermen will know the coordinates.
  - Need to know them so the effects on fishing can be assessed.
- I-092-003** • Need to know them so that air travel corridors can be reestablish- what is the impact on the current corridors? The Corridors for travel to and from Saipan, how are they impacted?
- I-092-004** • Training Range Complex Option A- requires realignment of 1.7 miles of Route 15- What is environmental impact on this? The realignment of the road?
- I-092-005** • Construction of the berms to the firing range does not appear to be covered by the EIS. There are about 7 each M series GWA production wells in close proximity. We cannot afford the chemicals from the munitions to permeate into the Mangilao sub basin, which is one of the six major sub basins in the Northern Guam aqua fir.
- I-092-006** • Be advised that the Andersen sub basin is in close proximity and according to the EIS about a dozen of water wells are in the planning stages right along the AFB main gate abutting Route 9.

### I-092-001

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the FEIS.

### I-092-002

Thank you for your comment. Figure 2.3-10 ("New Special Use Airspace [SUA] Requirements for the Proposed Action") in the draft EIS shows the proposed SUA associated with the proposed training activities. Figure 2.3-14 ("Training Range Alternatives") show the surface danger zones (SDZs) associated with the proposed training activities. Public notices and warnings would be provided so that watercrafts and water activities can be avoided due to the use of the firing ranges. As for impacts on recreational fishing, additional discussion has been provided in the socioeconomic chapter (16) of Volume 2 of the Final EIS.

### I-092-003

In addition, the Federal Aviation Agency (FAA) is a cooperating agency for the proposed action. They will also be responsible for approving and charting any new Special Use Airspace (SUA). This will require the FAA to follow established procedures for *Rule-Making* actions which involves public input, for establishing new SUA to ensure there are minimal impacts to airspace and existing air routes.

**I-092-007** • Construction of Berms are very important, JGPO needs to further study the Northern sub basin Hydrogeology or run the risk of contaminating Mangilao but also AAFB Sub basin.

**I-092-008** • The Sasayan Valley is blessed with a virgin aqua fur underneath and can sustain the Mangilao Sub basin. This is evident by the cavernous fresh water spring in Marbo Cave.

• There were studies that the Sasayan Valley has the capability of sustaining a few water wells.

• So the question arises, is the military willing to give up the water resources in the Sasayan valley for a firing range?

**I-092-009** • Potential for ordnance –ignited wildfires might impact soil and geological resources.

• Fire management plan is mentioned but not discussed thoroughly enough.

• Protocols or procedures for monitoring fire condition and adjusting training as needed are mentioned but not described in EIS enough.

• Protocols for using units to be briefed by range control on requirements suitable to the conditions for the days mentioned but not in enough detail.

• Protocols should a fire occur mentioned but not gone into detail.

• What roads will be used by fire fighting equipment and personnel?

**I-092-010** • The Need to get land for ranges was mentioned thru condemnation or long term lease- why not just by long term lease?

• Throughout the EIS, there is this mention of getting land by, buying it or by leasing -- why not just leasing?

• I as landowner, strongly oppose any sort of condemnation. My land is not for sale. But if the military has made their decision to use the property, I would like to negotiate with them but not, a unilateral condemnation price that I have no say so, whatsoever.

Thank you.  
  
 Rick Unpingco

#### I-092-004

Thank you for your comment. Route 15 will be realigned to allow for the installation of a training range complex that extends from Andersen South to properties east of Route 15. There would be temporary impacts to traffic and public safety during the construction of the realigned road. These temporary impacts would be mitigated by implementing a Traffic Management Plan that includes, but is not limited to, the use of traffic control devices, temporary detour routes, phasing of construction, reduced speed limits and lighting, and others.

#### I-092-005

Thank you for your comment. The DoD and regulatory agencies are equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from potential contaminants. Refer to Volume 9, Appendix D, Project Description Technical Appendix, Munitions, for a discussion of the munitions and constituents of concern associated with the proposed ranges. Range designs include targets with physical barriers behind the target, such as an earthen berm, that are designed to stop and contain the spent round. Best Management Practices (BMPs) are used to further contain spent rounds, fragments and materials from weapons firing, and reduce any impacts to the environment. The proposed ranges will be designed and maintained in accordance with all applicable federal and Government of Guam regulations. Specifically, Military Handbook 1027/3B contains procedures for reducing potential impacts from ranges through the implementation of BMPs. These include introducing soil amendments, vegetation management, engineering controls, instituting contaminant monitoring, reclaiming, and recycling. With ranges, lead is the primary leaching contaminant of concern and best management practices can minimize or prevent leaching of this constituent. Impact rounds from pistol rounds generally stay intact and impact rounds from rifle rounds

often fragment. Intact rounds and rounds fragmented into relatively large pieces are not easily transported by natural transport mechanisms (such as groundwater) and are largely contained within the berm or physical barrier where they can be recovered and disposed. Through the proper design of ranges, application of BMPs, and monitoring, the potential for groundwater contamination would be minimized. BMPs can reduce or eliminate the leaching of lead to the environment. These procedures include controlling soil pH to between 6 to 8 to prevent dissolution of lead, mining of lead from back stop berms, implementing a soil leaching monitoring program, and adding phosphate containing soil amendments to bind dissolved lead to the soil. Prior to building the ranges, an engineering study would determine the minimum depth of soil cover to ensure sufficient soil cover of the limestone, and to assess the suitability and optimum technique to add soil amendments such as phosphate to prevent lead leaching. In addition, when percolating water reaches the porous limestone the pH will increase, encouraging the precipitation of lead out of solution. The DoD will monitor for selected contaminants of concern. If monitoring identifies significant impacts, such as indications that chemicals of concern may exceed regulatory standards, reduce beneficial uses, result in adverse human or environmental health effects, or conflict with federal or Government of Guam regulations, then additional action would be taken to address these impacts. Furthermore, the EIS will be revised to explain how volcanic basement rock protrudes up through the limestone of the NGLA, thus separating nearly all of the proposed ranges from groundwater supply wells. The low permeability of the volcanic rock acts as a barrier to groundwater movement. A figure in the EIS will support this text description. However, there are two ranges where leaching contaminants would have the potential to impact the groundwater within the capture zone of water supply wells. The northwestern most grenade range proposed under Alternative B overlies the capture zone of the Marbo Wells. In addition, leachate from the southwest most small arms range under Alternative B may have the potential to reach the NGLA

inside of the capture zone of wells M08 and M09. Alternative B is not part of the Preferred Alternative considered in the EIS.

**I-092-006**

Thank you for your comment. Your observation of water wells in current planning is appreciated. We are working closely with GWA to coordinate location of proposed new water wells.

**I-092-007**

Thank you for your comments. DoD is aware of the need to implement routine firing range clearance operations (e.g., annually or as needed) to mitigate munitions and explosives of concern (MEC) depositions on the firing ranges to prevent the potential leaching of MEC related-compounds (such as lead and explosives residue) into sensitive aquifers below firing range and associated firing range berms.

The EIS discusses the action of routine firing range clearance operations as an effective method for protecting human health, welfare, and the environment.

**I-092-008**

Thank you for your comment. According to Volume 2 of the DEIS Figure 2.3-13, the firing range retained alternative is located southeast of Andersen South near Pagat Point. The range is located over the Mangilao Sub basin. Environmental concerns related to firing ranges include storm water runoff and erosion of lead particles, and release of dissolved lead to the groundwater or surface water. Potential environmental impacts from the range are likely to be localized and not impact other sub-basins.

Specific details of the firing range design are not included in the DEIS. It is assumed that the design of the firing range and operation and

management procedures will comply with all applicable regulations. Volume 2, Section 17 identifies and describes the numerous Federal laws and regulations governing hazardous substances. These regulations address recovery of lead-containing bullets and fragments, remediation of lead-contaminated soils and the control of surface water pollution caused by storm water runoff. The DEIS addresses the increase of hazardous wastes resulting from operations in Volume 2, Section 17.2.2.3. For the range, the DEIS identifies implementation of routine firing range clearance operations to mitigate deposition of munitions and explosives. It is assumed that the design of the firing range facility will consider best pollution prevention techniques to minimize the amount of lead release from training activities and resulting impacts to the aquifer. Opportunities to minimize potential impacts may include use of lead-free ammunition, bullet traps which decelerate the bullets and collect fragments, impact berms to prevent bullets from leaving the firing range, and construction of berms or terraces to reduce the flow of runoff water from the firing range.

**I-092-009**

Thank you for your comment. The comment relates to the fire discussion provided in Section 3.1.1.4 and 3.2 (Soils and Geology) of the EIS. Proposed fire management activities are discussed in the EIS. Adding details of the Fire Management Plan would not contribute to environmental analysis. The fact that a Fire Management Plan is being prepared and will be in place (with the appropriate protocols for monitoring fire conditions, ensuring proper equipment and personnel are available, and appropriate cooperative agreements are in place) to address potential fire concerns during military training is appropriate for the EIS. Section 3.1.1.4 and 3.2 provides a discussion of the history of fires on Guam as well as an analysis of wildfires and associated reduced vegetation and soil erosion concerns.

**I-092-010**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

0039

Dear President Barack Obama:

**Come to Guam** to find out for yourself that the largest military buildup in recent years will occur in an island half the size of Oahu, your Hawaiian birthplace.

**I-093-001** **Come to Guam** to find out for yourself that in the DEIS, there are inconsistencies with the federal protection of endangered species such as the green sea turtle, the Hawksbill sea turtle, and the spinner dolphin, all protected by law.

**I-093-002** **Come to Guam** to find out for yourself that in the DEIS there are inconsistencies with the federal protection of historic sites, such as ancient Chamorro villages, burial sites, artifacts, and fresh water caves.

**I-093-003** **Come to Guam** to find out for yourself that in the DEIS, the largest mangrove forest on U.S. soil will be destroyed by the dredging at Apra Harbor.

Dear President Barack Obama:

**I-093-004** **Come to Guam** to find out for yourself that in the DEIS, the annual holy trek to Mount Jumulong Manglo on Good Friday will be dotted with acres of missiles and a firing range in the area.

**I-093-005** **Come to Guam** to find out for yourself that in the DEIS, the Secretary of the Navy, not the President of the United States, signs off on the largest military buildup in recent years, yet the DEIS impacts Guam's environment, Guam's fish and wildlife, Guam's coastal resources, Guam's historic and cultural sites, and Guam's precious water resources.

**I-093-006** **Come to Guam** to visit my home in the village of Mongmong, where I am deeply privileged to have a latte stone set in my yard, yet, there are plans in the DEIS for a firing range in areas with latte stones, the pillars of Chamorro culture.

Dear President Barack Obama:

**Come to Guam** to find out for yourself that, as a fellow Pacific Islander, our quality of life is gauged by the community you live in, by the cultural roots embedded in our land, and by the precious tropical landscape we all cherish.

Sincerely,

Simeon M. Palomo

### I-093-001

Thank you for your comment. Without specific information regarding the perceived inconsistencies in federal laws which the commenter is referring to, it is difficult to address here in this format. It can be said that the Navy and federal government have worked together with local agencies on Guam for years identifying and protecting sea turtles and their nesting beaches, and spinner dolphins in the nearshore waters of Guam, including Apra Harbor. The Navy currently has standard operation procedures, mitigation measures and BMPs that consider federally protected species and their well-being. The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction). Additionally, the US Army Corps of Engineers permits for the proposed actions may include the following: biological monitoring on vessels (making sure sea turtles and dolphins [although rare in Apra Harbor] do not approach the area); restricting dredging activities when these sea animals enter the buffer zone and until they voluntarily leave the area; low lighting; and joint Navy/Guam Resource Agency monitoring of nesting beaches though out Guam, to name a few.

### I-093-002

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO to mitigate any adverse effects to cultural resources and to provide information necessary to protect historically important archaeological sites.

### I-093-003

Thank you for your comment. No mangrove forest will be removed

under any of the alternatives proposed. The mangroves of Sasa Bay are greater than 2000 feet from any area to be dredged and most mangroves are well over a mile from the proposed dredging areas. Dredging methods, including use of silt curtains, will prevent excess siltation from impacting mangrove areas.

**I-093-004**

Thank you for your comment. There are no proposals to locate missiles or the firing range in the Mt. Jumullong Manglo area.

**I-093-005**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The Department of the Navy (DoN) is the lead agency of the proposed action. As a result, leadership within the DoN will sign a record of decision.

**I-093-006**

Thank you for your comment. During a three-year planning process, the vast majority of historic properties, including all intact latte sites were avoided as the proposed alternatives were planned. Thus, no intact latte sites would be disturbed by the construction relating to this project, including the construction of the firing range.

TESTIMONY WITH RESPECT TO ENVIRONMENTAL  
IMPACT STUDY FOR GUAM'S MILITARY BUILDUP:  
MYTH OF ECONOMIC/AMENITY TRADE-OFF FOR GUAM

**I-094-001** critical that any dredging in Apra Harbor not harm the Apra reefs, specifically Western Shoals. It has been implied, if not stated, with respect to basing aircraft carriers on Guam, that there is a trade-off between economic benefit and the natural amenities of Apra Harbor. The

**I-094-002** Within the harbor are special, even special for Guam! As such they provide jobs and monetary income for dive and other recreational guides and outfitters. The income comes from both tourists and residents. With respect to tourists, compared with Hawaii, the underwater resources are mas maolik in Guam and not Mo Bettah in Hawaii. Furthermore, although not a monetary benefit but, nevertheless, an economic benefit, is the pleasure and any subsistence that residents gain from using the natural amenities.

**I-094-003** Similarly, any land sites that become unavailable will be a monetary loss from tourists and from residents and a non-monetary loss for residents. The boonie stumpers have been the most vocal in expressing concern for the loss of access to sites; however, the less vocal hunters will also suffer.

*Further as a scientific resource  
the Apra Harbor reefs provide monetary income  
for Guam through scientific grants. The reefs  
as a scientific resource are an educational  
resource*

*Peter C. Mayer (Taktuba) Ph.D.  
Mangilao*

**I-094-001**

Thank you for your comment.

The dredged channel alternative carried forward in the EIS is the least favorable for navigation, but is the least environmentally damaging because it minimizes direct impact to existing high quality coral reefs such as the Western Shoals and requires less dredging than the other channel options considered. To further minimize impacts to coral, the clearance needed for carrier berthing along the proposed wharf was reduced to avoid excavating a nearby outcrop of land with coral cover. Additionally, the proposed aircraft carrier turning basin at Apra Harbor meets the minimum radius needed to safely maneuver the carrier while minimizing dredging impacts. The proposed basin has the smallest circumference of any other active Naval Harbor.

As identified in the EIS, the proposed dredged area within the commercial harbor was previously dredged over 60-years ago. Significant impacts however may be seen to some coral reef, other immobile invertebrates, and some site-attached reef fish. A majority of the species will vacate the area and return when in-water construction is completed. Sixty percent of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae). The important shoal areas (Western Shoals, Middle Shoals, Jade Shoals, Big Blue Reef) are not expected to be impacted directly or indirectly by dredging activities based on computer tide/current modeling within Apra Harbor.

Recognizing the value of the coral resources, the US Army Corps of Engineering permits needed for dredging work will likely contain requirements and special conditions to protect coral reef communities and compensate for the loss of coral where it cannot be avoided. Some of these measures may include:

- o Mitigation for sedimentation impacts during construction (i.e. use of silt curtains)

- o Postponement of in-water work during potential coral spawning periods
- o Operational controls such as limiting dredging/release rates
- o Biological monitoring (i.e. pre and post surveys)
- o In-water water quality monitoring; and
- o Compensatory mitigation, which may include artificial reef installation and/or watershed restoration and management programs among others

As a note, the economic benefits of jobs and income that the carrier brings are recognized in the DEIS. However, the economic value of the coral lost to dredging is not factored into the compensation process for coral loss as determined by the US Army Corps of Engineers (USACE). As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the Clean Water Act (CWA), through the Section 404/10 permit requirements. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the USACE Compensatory Mitigation Rule, permit applicants are required to mitigate to no net loss of ecological services and function. The Navy has prepared a Habitat Equivalency Analysis (HEA) to establish compensatory values based on coral habitat loss. This HEA will provide the basis for proposed mitigation measures in accordance with a USACE and USEPA approved comprehensive mitigation plan that ensures compliance with the CWA.

**I-094-002**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-094-003**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

Draft Environmental Impact Statement/Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation

Please Circle Meeting Location: University of Guam Southern High School  
Okkodo High School Yigo Tinian Saipan

The Department of the Navy (DoN) and the Joint Guam Program Office (JGPO) invites your comments on the Draft EIS/OEIS for the Guam and CNMI Military Relocation. Please provide your comments below. Comment forms, or your own letter, will be accepted at the public hearings, or may be mailed to JGPO, c/o NAVFAC Pacific, 258 Makalapa Drive Suite 100, Pearl Harbor, HI 96860-3134, Attention: GMPO. You can also visit [www.guambuildupeis.us](http://www.guambuildupeis.us) to comment. Comments must be postmarked by February 17, 2010 Eastern Standard Time. Copies of the Draft EIS/OEIS are available for review at Nieves M. Flores Memorial Public Library, University of Guam Robert F. Kennedy Memorial Library, Joeten-Kiyu Public Library, Northern Marianas College Olympic T. Borja Memorial Library, and the Tinian Public Library. A DoN sponsored reading room has also been set up at Agaña Shopping Center for Draft EIS/OEIS review.

Please provide your comments below:

I-095-001

Why was the Gov. of Guam not involved in the planning of this military build-up? Are we not entitled to a participatory Democracy? Are we ever going to get a vote on self-determination?

\*\*\* Please Print Clearly\*\*\*

I-095-001

Thank you for your comment. Topics such as the political status also commonly referred to as “decolonization” and “self-determination” of Guam are important issues but are not part of the proposed action. DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island’s natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-096-001

I'd like to bring up a point where you guys said that you guys are going to protect us and all of those BS. But aren't you guys coming here because you got kicked out of Japan due to rape? That definitely doesn't sound like it's going to be safe... Now that even you Navy, Air Force, and now the Marines, aren't that mean we are going to be the "target"? Because of this build up, we will be afraid to walk the streets alone...

I-096-002

Some you guys are coming to our island, you should follow our rules... At least ask permission to the people who live in the area of the build up, if they could move. Give them a choice, don't just kick them out... You're already coming here with us having no say in it... Do you guys even consider the effects of your coming here? ~~our~~ Our island is so small, how do you think that overpopulation would help us? Not to mention about all of our poor infrastructures.

I-096-003

February 17, 2010 Eastern Standard Time

I-096-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-096-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-096-003**

Thank you for your comment. The potential impacts of population increases during construction and post-construction are described in Draft EIS Volume 2. Various resource areas, including socioeconomics (Chapter 17), are assessed in Volume 2. The impacts of the proposed actions on infrastructure such as power, potable water, wastewater and off-base roadways are described in Volume 6. Significant but mitigable impacts were identified for socioeconomics and utilities.

Volume 7, Chapter 2 summarizes the proposed mitigation measures and Best Management Practices (BMPs) that are mentioned in Volumes 2 through 6 under the various resource sections. The intent of mitigation measures and BMPs is to avoid minimize, reduce, eliminate or compensate for potential impacts due to the proposed actions. The list was updated based on comments received during the public comment period and will continue to be updated after the Final EIS is published during agency consultation and construction permit application processes.

The U.S. military has been in almost every country they can manipulate. What they are doing to Guam may have happened somewhere else. The same might happen to us if we let the military stay on our island. Guam is a beautiful island, and I do not want to see it's beauty get wasted. Guam is a peaceful island where you can raise your kids in a friendly environment. Chamorros were raised to be friendly to both nature and humans being. Do you really think that when the military, especially the Marines, come to Guam that our kids, grandkids and so on will have the same friendly environment? No. The once outgoing citizens of Guam might be conquered by fear. The military may say that they are bringing good things to the people of Guam. Sure they may be a few good things, but compared to the damages they will cause to us through the long run ~~nothing~~ these good things are nothing. The military coming to Guam will also make us a target by other countries. If ever there will be war, and soon we will know there will be, we the people of Guam will be one of the first targets. Do you want to put your loved ones in that much risk just because a bunch of militaries need a place to train. The military was formed to protect us. How will they do that when just for them staying here we will be seen as a threat and they may strike us.

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

As to the concern expressed about Guam being perceived as a threat to other countries, DoD has been a longstanding member of the Guam community. The intent of the proposed Army Air and Missile Defense Task Force component of the proposed actions is to protect the territory of Guam, its citizens and U.S. forces on Guam from the threat of harm from ballistic missile attacks from other countries and enemies of the U.S. The defense of Guam will continue to be a focus of DoD.

I-098-001

First of all, I don't understand why you guys have to relocate here. We are much smaller than Hawaii. What makes you think that the relocation would bring positive things to our island? Okay sure we'll get more jobs, but aren't those for the dependence of the military? You say our tax revenues will increase, but so will the cost of living! We already have thousands of people living on our island and we don't need more dependencies. Not to mention, I believe that crime rates will definitely rise because of this military buildup. I also don't understand why we don't have any say in this!!! That already shows negatively, you guys asked permission from other places and not us. Out of all places why Guam? Is it just because we're closer? Just go back to where you came from! We don't need your disturbance! I really feel aggravated that due to the buildup, you guys are bringing people from their homes and again we have no say in it. It's like you're taking everything from us already.

I-098-002

Other things I'm concerned about is our peace and quietness. I don't think we'd appreciate the shootings that were going to watch to. Because of the buildup and member coming here, we teens will be afraid to walk the streets any. Where will our children go in the future? What will happen to our future generations? I honestly don't think you guys even care about us. Seriously? We are just a tiny small island that's just a US territory! You guys want to come here and we're not even part of your "US citizen" crap. We don't even have the right to vote! We have no say in anything! Man I am one of the many who is speaking up... Stop this military buildup and go somewhere else!!!

Thank you for your comment. Volume 1 at Section 1.4 in the DEIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the DEIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the FEIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

The jobs created would become part of the Guam economy and would not be just for dependents of DoD employees. The EIS considers the socioeconomic effects including employment on Guam. The jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. The analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are

expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. DoD has studied these issues in a specific appendix included in the DEIS (Social Assessment Impact Study). The increase in population during the construction phase of the buildup is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service man and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

Guam and its citizens do have input into the decision-making process. Public comments on the Draft EIS are an important part of the process. Comments received from the public allow DoD to make changes to the EIS before the document is finalized. This information becomes part of the Final EIS and is evaluated when DoD issues a Record of Decision at the end of the NEPA process. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and

that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-098-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-098-003**

Thank you for your comment. The firing ranges will produce additional noise in the areas adjacent to the ranges but be confined to the localized area. Ranges are designed with surface danger zones and will be secured from the general public such that rounds fired upon the range would remain on the range and not endanger the public.

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. DoD has studied these issues in a specific appendix included in the DEIS (Social Assessment Impact Study). The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service man and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-098-004**

Thank you for your comment. Topics such as the political status also commonly referred to as “decolonization” and “self-determination” of Guam are important issues but are not part of the proposed action. DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island’s natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Guam rail - attention Vanessa Pooi / Terrestrial biologist  
Please obtain an exemption from the endangered species act to allow local farmers to raise Guam rails rather than to continually let them go into unnatural environs where they starve, become invasive species, or are eaten by cats, rats and/or snakes!  
We can raise them faster/cheaper/better than Agricultural Dept personnel can and grants to raise them should be available to local farmers too.  
Please stop Ag Dept from eventually releasing cage raised Guam rails (kiky) to die and let at least 2 of their rails go to farmers who live in areas or who can cage-grow them under Ag Dept supervision to insure inbreeding is not a problem / Viau Cayer ES 472-2229

Thank you for your comment. The captive breeding program for Guam rails is a collaboration between the government of Guam and the U.S. Fish and Wildlife Service and they are responsible for making decisions regarding raising and releasing Guam rails. These decisions are not a part of this EIS process.

I-100-001

Thank you for your comment. The selection of Guam for the proposed military location is discussed in detail in Volume 1 of the Draft EIS.

The firing ranges being proposed is one of the major requirements for the Marine base. Marines stationed on Guam require annual qualification or requalification on individual and crew to maintain their combat readiness. Every Marine on Guam will require this type of training. This high volume can only be met with ranges located in close proximity to cantonment areas. It would be cost prohibitive to move every Marine to an off island location to meet these reoccurring training requirements.

Toxic wastes are not anticipated to be generated; recycling of lead and shells are typically part of the environmental stewardship practiced on military firing ranges.

Thank you for your comments. The Final EIS has been updated (Volume 2) to discuss the impacts on social services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

Increased traffic will kill off our already dwindling panglo (red crabs) which thrive here for thousands of years and have been a staple in the local diet.

Please increase and make a special financial allotment to pay for these works to keep panglo off the roads and protect this creature with underpasses they can pass thru along with stream waters.

I-102-001

Thank you for your comment. Increased traffic from the proposed action beyond what is currently occurring has not been identified as a factor that is impacting land crabs. These crabs have not been identified by the government of Guam or the United States as animals of special concern due to rarity or declining numbers. If specific information can be provided about areas where there are large numbers of crabs being killed then a more specific response could be provided.

Microasia

A ~~the~~ marine lab faculty ~~has~~ reported to a class "Geology of Micronesia" I attended in FA88 that a former Naval Firing Range in Pago Bay is leaching lead from rounds expended rounds into the shoreline.

The proposed firing range at Pagat Guam is over a "water table which abuts the shoreline" (Guampda). What will mitigate the metals from rounds, incendiaries, & targets from entering the water table? <sup>Are</sup> The fuels & chemicals on the surface of these training grounds be shielded from the drinking water?

A historical precedence already exists in the abandonment of a firing ~~range~~ range at Pago Bay which is leaching lead into the sea.

Rudolph Villaverde

I-104-001

Thank you for your comments. DoD is aware of the need to periodically implement routine firing range clearance operations (e.g., annually or as needed) to mitigate munitions and explosives of concern (MEC) depositions on the firing ranges to prevent the leaching of MEC related-compounds (such as lead and explosive residue) to aquifers below firing ranges. These and other best management practices (BMPs) will be implemented to protect human health, welfare, and the environment from adverse impacts related to the use of the proposed firing ranges.

I-105-001

Thank you for your comment. To respond to your comment, the Navy contacted the Guam Mass Transit Authority (GMTA). According to GMTA, that agency could facilitate special arrangements that would be made in advance to accommodate special needs passengers onto the base. There would need to be coordination done between GMTA, the Navy (as a sponsor to get on base) and the private bus contractor.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 96

Received: 1/9/2010 2:13:23 AM

I was a navy corpsman, stationed on Guam from '92 to '94. I fell in love with the island while I was there, even staying for six months after my discharge.

One of the places I would frequently visit was the cave at Pagat. Not only are the cave and adjoining sea cliffs beautiful almost beyond the capacity of words to convey, but the area is literally peppered with archeologically significant relics of Chamorro culture. Latte stones, grinding stones and other evidence of past habitation abound here.

I would frequently lead hikes through this area when I lived on Guam, introducing other off-islanders to the beauty of this place. A hike through this area frequently introduced these people to the only Chamorro relics they had ever seen, as well.

I strongly urge you to keep the Pagat area free and open to the public at large, not only for recreation purposes, but for the areas immeasurable archeological and historical value as well. Thank you.

#### I-106-001

Thank you for your comment. DoD understands the importance of the cultural and historic issues related with land in Guam, and in particular those associated with the Pagat area. DoD acknowledges that maintaining access to this site is important. Although plans concerning access have not been developed, it is intent of DoD to continue public access should these properties be acquired. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 97

Received: 1/9/2010 5:20:23 AM

First of all, I want to make it abundantly clear that I have no anger to the military personnel, but want to express my concern of the unresolved issues of the past military buildups and register my worry that the current one will be no different. Every family on Guam has at least one family member who has served, is serving or will be serving the armed services. We understand the importance of a military presence, however we must find balance if we are to live together on this small island.

I just recently turned 50 years old last week and the memories of the last 5 decades flood my mind. I lost my mother just about 10 years ago and her words have come to the surface, as she is not here to share her story.

My mother Felicidad Borja Salas Calvo was a resident of the village of Sumay, the one village where everyone was displaced to make way for Naval Station. Immediately after the war, she and her sisters returned to the only home they knew only to be told that their property was to be used for the war effort. She never went into much detail after that and would always excuse herself and lock herself in her room. She never wanted to reveal her pain to her children. She remained strong throughout the years until I returned from college in 1983. For the first time in my life, my brothers and sisters and father accompanied my mother on All Soul's Day to visit the Sumay Cemetery. At the cemetery, she proceeded to announce the names of her many relatives buried there including her mother and brother who were buried there. It was clearly painful as she recounted the experience of the war, the deaths of her mother and brother, and not being able to pay respects to those she lost so many years ago. Over the years, I have tried to go on All Souls Day, but the one day a year was always inconvenient as the demands of work and life were always in conflict. I have brought this issue up over the many years with various military officers, but to no avail. There must be good reason why they transfer military personnel every two years. They don't want anyone to become too sensitive and caring to local issues.

In 1986, those who lost properties to the military were allowed to finally receive payment at 1940 prices. Near the height of the property values, Congress only allotted \$40 Million to compensate the people of Guam for approximately 70 square miles of land. My mother received a pittance in respect to what she lost. Today, the military wants to take more property from the people of Guam and at what price? As we have no voting representative in Congress, we have no real power to fight such a well-financed and powerful force.

I remember being in high school and my parents took my brothers and me to see my older brother off at Andersen AFB. He had joined the marines and was being deployed. This was at the tail end of the Vietnam War. I remember the guard telling my mother that we were not allowed on base and only military personnel and their families were allowed on base. My mother noted that she has three sons in the military, still we were turned away. I remember, with tears in her eyes, telling the guard, "I am not your enemy. You have two of my sons in Vietnam and taking a third. You have taken my land and given me nothing, you have taken my mother and brother and don't allow me to pay respects." With that said we went home that day and my mother hid in her room.

I-107-001

Thank you for your comment.

I-107-002

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-107-001

I-107-002

**I-107-003**

A couple of officers visited my mother while she lay on her deathbed in 2001. They said they would assist to have her buried at the Sumay Cemetery with her mother and brother and other relatives. I remember her telling me that she told them, "Do you want to continue punishing me after I am dead. For most of my life the military took everything I had and paid me a pittance of what it was worth me and my family, took my family who are buried in Sumay Cemetery and now you want to keep my children from visiting my grave." We burid her in Barrigada.

**I-107-004**

This military build up has brought forth emotions from all perspectives of the military buildup, from those who gain to profit from it and those who are on the verge of losing more access to the natural resources that our culture derives its strength from. Today, 75% of the island coastal areas are restricted due to the laws of the U. S. that have been adopted here. There are forces that would take it all away.

**I-107-005**

As Guam was part of the spoils of the Spanish-American War, the U.S. took responsibility for not just the island, but also the people who live here. To this day, the U.S. has refused to allow full access to U.S. citizenship as we still cannot vote for President and have a non-voting delegate in Congress. At the end of the day, we are just a "Territory," a piece of property. Until such a time that we are provided full rights and privileges the U.S. has a responsibility to not just the island but to the people of Guam.

Too many times I have heard that because we were "rescued" in World War II, that we are owned by the U.S. That this island is the property of the U.S. That the blood spilled by the U.S. servicemen in World War II gave the military the right to take what they wanted. I ask, what of the local people who gave their lives to the cause in World War II, those who disappeared and those who suffered and continue to suffer because of the way they were treated by our liberators? We must stop being treated as stepchildren and start being treated with some dignity. My mother deserved no less. We must not continue to allow the same mistakes to continue. The military must address all unresolved issues and proved a failsafe so that the mistakes are not done again. This is obviously not the case as we are still told only what they want us to hear by their highly paid professional experts telling us that everything will be okay.

**I-107-006**

I have attended many Restoration Advisory Board meetings over the years and have heard that PCB, chemical and other dumpsites around Guam are not harmful and that it is safe to eat the fish, while at the same time telling us that the PCBs accumulate in the organs of the predators. Are we not the top predator? At each meeting I have asked the "experts" to eat fish with me, but have always been refused. I have also asked when the people will be tested, only to be told that that is not within the realm of their work. In the eyes of the military we are expendable.

**I-107-007**

The military plans to destroy Sasa mangroves by dredging Apra Harbor and then dump the material into the ocean nearby. There are so many things wrong with this and again at various meetings with the hired "experts" who dismiss our concerns. When will we be treated with respect?

**I-107-003**

Thank you for your comment.

**I-107-004**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-107-005**

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

**I-107-006**

Thank you for your comment. In 1978, the USEPA banned the continued manufacture of PCBs. Toxic substances associated with DoD operations in Guam including legacy PCBs that may exist as a result of

actions that took place prior to the ban are taken by licensed transporters and disposed of in permitted landfill facilities in accordance with applicable federal, state, and local laws and regulations.

When using toxic substances including PCBs, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment.

These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These protective actions include, but are not limited to:

- comprehensive personnel training including hazardous substance storage, handling, use, transportation, and disposal requirements;
- toxic substance communications standards that demand the use of material safety data sheets (MSDSs) and other communications tools to train and inform workers and emergency personnel of safe handling and storage, health and safety, and specific hazards posed by all hazardous materials/wastes in use at specific facilities;
- the use of various engineered solutions including secondary containment, leak detection and monitoring systems, the use of inventory records and use records, etc;
- use of hazardous material management plans (HMMPs), hazardous waste management plans (HWMPs), spill prevention, control, and countermeasures (SPCC) plans, and other related documents;
- waste minimization plans and the use of alternative, less toxic substances where feasible;
- proper transportation, handling, storage, use, and disposal of

hazardous substances; and

- other related prevention and mitigation measures.

DoD is committed to using, handling, storing, and disposing of all toxic/hazardous substances in a manner that is protective of human health and the environment. In addition, DoD is responsible for cleaning up known hazardous waste sites on Guam for which they are responsible and these remedial actions are in process.

**I-107-007**

Thank you for your comment. The mangroves of Sasa Bay are greater than 2000 feet from any area to be dredged and most mangroves are well over a mile from the proposed dredging areas. Dredging methods, including use of silt curtains, will prevent excess siltation from impacting mangrove areas. The nearest proposed ocean disposal site for dredge material is 12 miles from outer Apra Harbor.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 98

Received: 1/9/2010 10:04:35 AM

I-108-002

As a contractor working in Guam and the CNMI by far the most comments that I hear are positive concerning the transition. Although Guam residents that I know are about 75% in favor of the move and support the EIS CNMI residents support the military move to their area 100%. I haven't met anyone who would not like to host a US base in Saipan, Rota, or Tinian.

I-108-001

My comment is that move whatever makes sense to Tinian and Saipan. The people there support the US military and will go out of their way to support the troops in any fashion. Gov. Fitial is also behind any support that the CNMI can offer the US military, be it training bases or R&R support in Saipan.

Thank you,

D. Leavitt, Jr.

#### I-108-001

Thank you for your comment. Locations within the Commonwealth of the Northern Marianas (CNMI) for aspects of the proposed actions were considered. The current locations of the proposed actions on Guam and in the CNMI reflect a careful balancing of many factors including land availability, infrastructure, training and operational requirements, and community concerns/support.

#### I-108-002

Thank you for your comment. Volume 1 at Section 1.4 in the DEIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the DEIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the FEIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

Exactly how is it possible for the U.S. D.O.D. and Japan to get together and make such a decision that will change the lives of many people, that are unable to vote for either government's leaders? This decision is changing the landscape of an island where the people have no say. Does that seem civil or humane? I don't think so.

I-109-001

#### I-109-001

Thank you for your comment. Chapter 1 of Volume 1 briefly describes the international negotiations with Japan. Participants in the negotiations include Cabinet-level officials that report directly to the President. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 100

Received: 1/10/2010 11:19:20 PM

I-110-001

1. The Government of Guam apparently does not have the resources to review and monitor compliance with the SWPPP now. It seems very unlikely that they will be able to hire new qualified people to meet the increased demand caused by the build-up. During the build-up there will be a shortage of experienced engineers and the Guam Government's inability to rapidly change with market conditions will seriously hamper its' ability to hire qualified experienced people.

The EIS should address how the US Military is going to mitigate this problem.

I-110-002

2. It does not appear that the EIS properly addresses the "Water Cycle". The additional 79,000 people associated with the build-up will use a lot more water than the 8,000 Marines and their families. Why should the present residents of Guam pay \$500M for improvements to the system required by the build-up? Once the water cycle goes negative bad things happen very quickly and are very difficult to reverse. The EIS says the situation will be closely monitored. That's not enough! There must be a plan and infra-structure to reverse the situation immediately not twenty years later. All impervious surface run-offs on military installations must be collected and treated and returned to the aquifer, similar to the requirements for municipalities in NJ(EPA).

I-110-003

3. Why should the present residents of Guam pay for the required increase in sewage treatment? Capital Improvements required by the build-up should be the Military's cost. The O&M will be the Government of Guam forever.

I-110-004

4. Increasing the island's population by 40% is going to have a substantial environmental impact and mitigating the impact on the installation is not enough. The Military must mitigate the impact from "sea to shining sea" as it is causing the change.

## I-110-001

Thank you for your comments.

1. Through the NEPA process, potential future regulatory needs are identified. Regulatory agencies can then plan for the potential future actions and if necessary, adjust their staffing and/or resources. DoN and JGPO will continue to coordinate with the Government of Guam to identify actions that may require compliance enforcement so that the Government of Guam can in turn have an appropriate level of compliance oversight resources.

2. Active monitoring, long-term planning, and on-going analysis/studies are tools water managers use to take necessary actions to protect water resources. The EIS discusses how these tools are used now and how they would be used under the Action Alternatives to protect water resources. The EIS states that in groundwater recharge areas, runoff from an increase in impervious surfaces would be collected and treated prior to reaching the aquifer.

3. The Navy Region on Guam has a robust Stormwater Pollution Prevention Plan (SWPPP) that is implemented to control stormwater runoff from the base and reduce pollutants in stormwater discharges to surface waters and reduce contamination of stormwater infiltrating into groundwater. Guam EPA is considering using this SWPPP as a template for stormwater programs in Guam. Off-base stormwater controls would then be subject to these requirements under Guam regulation.

## I-110-002

Thank you for your comment. To clarify, the approximately 80,000 additional population on Guam during the height of the buildup would include DoD as well as construction workers and civilian growth. After the peak year of 2014, the population would decline as construction is

finished to an estimated total increase of about 43,000, of which about 33,000 would be military (including transients). Most construction workers would be expected to be housed in work camps and use much less water than a full-time resident. Estimates of the sustainable yield of the northern Guam lens aquifer indicate there is adequate capacity, even with the currently high water "lost" in the GWA system (about 50%). GWA is making progress in identifying leaks to repair and thus lower that "lost" water percentage. In the first year of a three year project, about 4 million gallons per day of leaks have been identified.

DoD would entirely fund the required upgrades to the DoD water system. Upgrades to the Guam Waterworks Authority (GWA) system would be expected to be funded from fees on new developments, including the construction work camp (ultimately paid for by DoD through the various construction contracts). The additional customers would also provide a broader customer base to absorb increased costs. DoD would also make available to GWA excess water withdrawal capacity so improvements and expansion of the GWA water system could be done over a longer time frame. DoD would also become an advocate for GWA in finding grants and low-cost loans to help them fund water system improvements.

As explained in Volume 7 section 2.3.4, the potable water system for the entire island would be monitored jointly with GWA and GEPA. Should this monitoring indicate that a deficiency of the required quality of water is forecast within the 6 to 12 months in the future, either the tempo of construction would be changed to reduce forecast water demand or water expansion projects would be accelerated to increase the supply in time.

The DoD concurs with the observation that increases in paved surfaces could impact recharge of the aquifer. To minimize this, low impact development measures would be implemented and are currently

being studied and planned. The new Marine base would be designed with runoff collection, filtering, and seepage areas to ensure maximum aquifer recharge occurs.

**I-110-003**

Thank you for your comment. DoD would actually fund the restoration of the North District Wastewater Treatment Plant (NDWWTP) to its original operating capacity. This would provide the needed capacity for both DoD and civilian growth.

US EPA has notified Guam Waterworks Authority that both the NDWWTP and the Hagatna WWTP must be upgraded to secondary treatment (an advanced treatment above and beyond primary treatment). With the DoD buildup, DoD would fund its fair share of this additional investment in addition to its fair share of the operations and maintenance (through user fees). This upgrade to secondary treatment is anticipated to occur after the construction peak, so only the capacity required for the more or less "steady state" of population would be undertaken.

**I-110-004**

Thank you for your comment. Potential mitigation measures are presented in the impact analysis portions of each volume and are summarized in Volume 7.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 101

Received: 1/10/2010 11:29:59 PM

I-111-001

The " Military Housing Allowance" skews the rental costs for the residents of Guam. Adding 8,000 new allowances will price most the present government workers, retirees and working poor out of the market. The Military must build at least as many low income housing units off base as it has housing allowances. If the build-up is not going have a detrimental impact on the present government workers, retirees and working poor, then the military must provide housing for the 79,000 person increase in population. The fact that an E-3 get \$2000 tax free off post housing allowance makes it impossible for people making less than \$1500/mo take home to compete for housing. This is a big problem now and will be a huge problem during and after the build-up. The Military must either keep the soldiers on post or provide low income housing for the resident's displaced by the build-up. This will have a huge environmental impact on the existing residents of Guam and it is directly caused by the build-up.

### I-111-001

Thank you for your comment. The Final EIS anticipates that military housing will be built within the main cantonment area. It is anticipated that the majority of Marine families would rent units in the military housing and generally not compete with Guam residents for available housing units. It is likely that housing prices and rent will increase in the short term. After the construction period, housing and rental prices could decline because the construction labor force (not including the H2B workers who will live in dormitory type quarters) would leave Guam.

## COMMENT SHEET

I-112-001

While I think that the buildup has positive aspects, it is really unfortunate and unfair that the residents had no input into the implementation. I am glad to be a U.S. citizen but the heavy-handedness of the Dept. of Defense in this situation is typical. It is apparent that many dollars will be spent to make sure this move has the needs of the military personnel as a priority only. The inconvenience suffered by the local population will be ignored. So sad - especially considering we have no real senate/legislative representation in Washington and cannot even vote for the president.

#### I-112-001

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. I-113-001

The DEIS indicates the removal of coral in specific areas of the harbor and lists potential mitigation measures as the construction of artificial reefs.

My issue is, there is specific information regarding the removal of the coral. The same specific information should be provided regarding how much artificial reef will be created, where the artificial reef will be created, and how the successful completion of those artificial reef projects will be controlled and certified.

#### I-113-001

Thank you for your comment. The EIS has identified significant impacts to coral from dredging activities. As required by the US Army Corps of Engineers (USACE) Compensatory Mitigation Rule, permit applicants must mitigate to no net loss of ecological services and function. The EIS identifies the compensatory mitigation option proposed in Volume 4, Section 11.2.2.6 - Implementation of Coral Restoration, and Section 11.2.2.7 - Development of Potential Mitigation Proposals. In general, the USACE permit is the vehicle through which compensatory mitigation such as artificial reefs would be implemented. Selection, scaling, and implementation of appropriate compensatory mitigation actions are being carried out in consultation with USACE, NOAA, USFWS, USEPA and GOVGUAM resource agencies. The Navy has proposed as one of its options, the construction of an artificial reef project in Apra Harbor based on the direct application of a Habitat Equivalency Analysis (HEA). The Navy would install an artificial reef in approximately 80+ ft (24.4 + m) of water (to ensure its survival even in a super-typhoon) using one or more agreed upon artificial reef concepts. Reef alternatives may include "Z blocks" (used in Hawaii), Biorock, and Reefballs. Placement would be on the harbor floor and would not affect hard substrate. A potential mitigation site would be located within the ESQD arc of Kilo Wharf (to prevent the reef from being used as a fish aggregation device that would invite recreational or commercial fishing or diving activities). As part of the artificial reef proposal, the HEA restoration project would include the potential use of transplanted coral as part of its compensation strategy. Success criteria for the artificial reef project would be based on replacement of benthic structure and on percent coral cover, as a proxy to ecosystem function. Long-term monitoring would be implemented to measure success. As more information is gathered, a detailed mitigation plan would be developed to comply with requirements of the USACE Compensatory Mitigation Rule.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 104

Received: 1/11/2010 3:49:42 AM

I-114-001

Unexploded ordnance currently residing on the island in areas where construction improvements are taking place will be molested, DEIS indicates UXO will not be an issue. However, the potential explosions of UXO could damage people, infrastructure and the environment therefore it is an issue and DEIS should outline measures to be taken to properly manage UXO.

#### I-114-001

Thank you for your comment. The Public Health and Safety sections of the EIS provides background regarding the potential presence of UXO throughout Guam and CNMI and provides analysis and measures to be taken to prevent mishaps from encounters with UXO. The EIS specifies that to reduce the potential hazards related to exposure to MEC, qualified UXO personnel would perform surveys to identify and remove potential MEC items prior to the initiation of ground disturbing activities. The general public would be excluded from entering construction zones and training areas. Additional safety precautions would include: UXO personnel supervision during earth-moving activities and providing MEC awareness training to construction personnel involved in grading and excavations prior to and during ground-disturbing activities. The identification and removal of MEC prior to initiating construction activities and training construction personnel as to the hazards associated with unexploded military munitions would ensure that potential impacts would be minimized.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 105

Received: 1/11/2010 3:53:46 AM

Groundwater extraction wells proposed to support the build up are located in relatively pristine environments where there is low water contamination. The DEIS should prioritize the contaminated areas of the aquifer first for groundwater extraction and apply pump and treat cleaning methods to clean the water prior to delivery to customers. In this manner the clean portions of the aquifer are preserved for later use and the unclean portions of the aquifer get cleaned up. Many of the contaminated sites over the NGL are the result of military activities anyway.

I-115-001

#### I-115-001

Thank you for your comment. The option of extracting water from wells that are not currently in production due to contamination is considered in section 2.2.3.4 of the DEIS. This option is included in the Basic Alternatives 1 and 2 to lower the capacity required from newly installed wells. However, the option to rehabilitate inactive DoD wells does not provide sufficient water supply to meet the full demand required by the Marine Corps relocation. Newly installed wells are necessary to meet the full demand of the relocation.

At the time the July 2008 Guam Water Utility Study was prepared, there were 12 DoD wells that were inactive due to problems including microbial contamination, volatile organic carbon (VOC) contamination such as trichloroethene (TCE), high salinity and structural/mechanical issues. The DoD has since begun or completed rehabilitation or replacement of several of the Navy-owned wells. The inactive wells with VOC contamination, Marbo #2 and Tumon Maui wells, are located in the Yigo Sub-basins. Compared to the 1991 sustainable yield estimate, the available yield in the Yigo sub-basin is not sufficient to allow reactivation of these wells with an alternate means of treating the contamination. Therefore, the Guam Water Utility Study, considers replacement of the capacity from the inactive wells in areas of the NGLA where there is sufficient available yield. Basic Alternative 2 includes installation of 12 replacement wells on Navy Barrigada.

Website Comment Number: 106

Received: 1/11/2010 3:56:10 AM

Drinking water, storm water and waste water infrastructure on island are already taxed for various reasons. These deficiencies should be included in the over all impact assessment so that the total cumulative impacts to these infrastructures are understood by the public.

I-116-001

#### I-116-001

Thank you for your comment. Volume 6 of the EIS describes both the existing conditions of infrastructure and the impacts of the proposed actions on these systems. The discussion in Volume 6 is by utility, such as power, potable water, wastewater management and solid waste management. As you suggest, the existing systems are taxed and in some cases there are issues of non-compliance with federal regulations. The proposed utility infrastructure improvements were developed in consideration of existing conditions and would met additional demand associated with the proposed action in specified geographic service areas.

Volume 7, Chapter 3 summarizes the collective impacts of the preferred alternatives on utilities.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 107

Received: 1/11/2010 4:51:45 AM

No condemnation should occur to acquire private land. The EIS should specify the methods that will be used for the acquisition of land so the the public is not confused about the process.

I-117-001

#### I-117-001

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

Will anything be done to ensure that the spinner dolphins and the turtles, in the apra harbor area, will not be harmed during the dredging? If there is even a chance that they will be harmed, it should not be done. The lives of the native ocean inhabitants are more important than a parking lot for war ships.

I-119-001

#### I-119-001

Thank you for your comment. The Navy currently has standard operation procedures, mitigation measures and BMPs that consider federally protected species and their well-being.

As stated in the EIS (Volume 2 on pp 11-26 and 11-27), the threatened green sea turtle and the endangered hawksbill sea turtle are the only two ESA-listed species that are anticipated to be in the nearshore marine environment and adjacent beaches. The Navy, in cooperation with USFWS and GDAWR, monitors for sea turtle nesting on Navy land throughout the nesting season for the green sea turtle and the hawksbill sea turtle. There is no critical habitat designation for any marine species on Guam. The spinner dolphin and common bottlenose dolphin are the only two marine mammals anticipated in the nearshore environment, however, both species are rarely seen in Apra Harbor.

To prevent harm to the seal turtles and dolphins the Navy will implement mitigation measures, if required, and Best Management Practices during in-water and land-based construction activities (i.e. dredging and wharf construction). The US Army Corps of Engineers permit for dredging will likely require measures to protect biological resources and the water quality they depend upon. These may include the following: biological monitoring on vessels (making sure sea turtles and dolphins [on rare occasions] do not approach the area); halting of dredging activities if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area; low impact lighting, and joint Navy/Guam Resource Agency monitoring of nesting beaches throughout Guam.

I-120-001

I was wondering if a version of this document is made available in the native language of Guam, Chamorro.

#### I-120-001

Thank you for your comment. Due to its size, the complete DEIS was not translated into Chamorro. However, the handout from the public hearings (which summarized impacts from the proposed action) was translated, mailed to citizens who requested a translated copy at the public hearings, and is also available at the Nieves M. Flores Library, RFK Library at the University of Guam, Guam Legislature, Agat Mayor's Office, Santa Rita Mayor's Office, Barrigada Mayor's Office, Dededo Mayor's Office, Yigo Mayor's Office, Talofoto Mayor's Office, Umatac Mayor's Office and the Astumbo Community Center.

I-122-001

I read a section of the D.E.I.S., that from my understanding, stated that preventing public access to sites like the Pagat Caves would be good - because it will prevent vandalism! I find that insulting! There are many more people who visit that area with out vandalizing it, than those who do. That is an area of peace and remembrance. It is an area that connects us to our history. I hope you are aware of how rude and insensitive that comment was. I find it hard to believe that experts actually wrote this document!

I-122-001

Thank you for your comment.

A sampling and analysis plan should be developed and executed for harbor bottom sediments in areas of dredging for radioactive contaminants, heavy metals and organics. All materials should be tested prior to dredging activities to avoid dispersion of contaminants around the harbor and the reefs. So that human swimmers and other aquatic organisms do not get contaminated.

I-123-001

#### I-123-001

Thank you for your comment. Various planning documents will be required prior to any dredging activities to prevent the dispersion of known or suspected contaminants (e.g., radioactive contaminants, heavy metals, organics, etc.) around the harbor and/or reefs. These plans may include sampling and analysis plan(s) and other mitigation measures if data and/or historical use records either confirm or lend to the suspicion of the presence of contaminants in the sediments to be dredged.

Hafa Adai, I would like to express how crucial our island is to the people of Guam. We value our land, our waters, our culture, and our ancestors to the utmost extreme. You may not value these issues as much as we do, and you may not see it as being very important. To the people of Guam this is all we have left. For many years, people have taken away our land, with held us from speaking our native language, and dictated orders for us to follow. We have sacrificed so much for the United States. By bringing 8,000 Marines and their families to Guam you are taking all that we have. Guam doesn't have the capacity to hold this many people. The crime rate will increase. I will be afraid to walk around on my own island in fear that I could possibly get raped or violated. This will no longer be a tropical island that I call home. The green will be turned into concrete. The cave that I often visit with family and friends will be turned into a firing range. Our reefs will be blown up and the fish that my brother could catch to feed my family will be nonexistent. You are killing our environment! You are doing more damage than good to this precious island that I call home. I beg you....please do not bring these Marines to our island, please! Si Yu'ous Ma'ase. Thank you.

### I-124-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Take the time to think.  
Its not just us locals who will be at risk on the streets  
It is also you people who are coming here.

And dont say anything that its up to the discipline of the local community to be having such activity on the streets because the racetrack is the only place for them to come out and show everyone what we love doing.

With that said, not only our lives will be at risk in case of a devastating accident would possibly occur. What about commercial buildings? Power lines? Poles? Possibly even the place you call home while you are dead asleep in your slumber.

The local authority will not make much of an effort in implementing a rules on street racing because as we all know, these "5,0's" come to the tracks too to watch some races.

**I-126-002**

As far as the traffic, come one people, we already know how bad it gets in between 6-8 am and 5-7 pm. And seriously!? Do you wanna spend 2 hrs, about 3-4 gallons of gas just to get from Yigo to Tamuning?

**I-126-003**

I say they listen to what people have to say before they start a buildup.

If you dont listen to what we have to say, then worry about what we're about to do.

And yes, if this has to be one, it is a threat.

**I-126-001**

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

**I-126-002**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning

horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

**I-126-003**

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

PLEASE DONT MESS WITH MY OCEAN!!!!!!!!!! TRAIN ALL YOU CAN BUT LEAVE THE OCEAN ALONE FOR MY CHILDREN.

I-128-001

### I-128-001

Thank you for your comment. Training operations in and adjacent to the ocean are an essential component of maintaining readiness. As described in the EIS, the DoD will implement measures to minimize potential impacts to the ocean environment.

0125

DEIS Comment  
Guam Military Buildup  
P.O. Box 24236, GMF  
Barrigada, GU 96921  
January 8, 2010

I-129-001 | My name is Raymond L.G. Taimanglo. I am a retired Colonel in the U.S. Army, a resident of Guam, 53 years old and reside in the village of Yigo.

My mother Vicenta L.G. Taimanglo owned 18 hectors of land in the vicinity of AAFB(S) which was taken by the U.S. Navy after WWII. These lands are now recorded in the Wills of my siblings and me, since my mother passed away several years ago. We hope that one day our children will receive this property back. Our children will always know that the land is their own and that our nation needs it for now and that "Now" is a relative word and that "Now" could mean forever.

Once again our family is faced with another possible land taking. My wife Gwendolyn Nelson Taimanglo is a land owner in the Sasayan Valley. I am disheartened with the thought that we will lose our land once again.

I-129-002 | In the interest of time I will begin my presentation.

The DEIS did not fully explore viable military sites for training and weapons ranges (firing ranges) because it dismissed them for various reason which raises some concerns. The military sites reviewed to construct firing ranges on the West Coast were easily dismissed. As a result, these sites or a combination thereof did not go through the rigorous step 2 alternative analysis, which may deny the decision makers the option to select a site or a combination thereof. The reasons given to dismiss the West Coast sites didn't seem justified enough to drop them as an alternative. Concerns such as denying the use of recreational areas, restrictions on favorite dive spots, restricted ocean travel for boaters, restricted hiking trails, and possible impact on tourism, all hold true when applied to the East Coast alternative, which is the only alternative

I-129-001

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-129-002

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. Specific reasons why the firing range could not be located on the west coast at Finegayan include the following. There was concern that the amount and location of submerged land that would be encumbered by the SDZs generated by the ranges on the west coast would be an unacceptable impact on recreational activities and traditional fishing areas, which are prevalent

given in the DEIS. The advice given by the Office of the Governor to explore the eastern side of the island for possible alternatives made it easier to dismiss a host of sites located in the west coast of Guam. In addition, all military sites had a common caveat in dismissing potential sites that were considered, "...incompatibility with future missions."

To simply dismiss the alternative to put a range at Tarague Valley because it was incompatible with future military missions is questionable especially when this line is used to dismiss all military sites that were considered. Once again the decision makers could be denied the benefit of selecting this alternative because of one catch all statement, "...incompatibility with future military missions'.

The Tarague Valley alternative is a good alternative since it is a convenient location for training and ranges. The Tarague Valley compliments the activities as described in the requirements list of the DEIS. This alternative must be explored and if possible selected for training and range operations in lieu of the East or West Coast alternatives. The military must strive hard to resource the buildup from within their land inventory. In addition, this alternative is consistent with the initial statement made by JPO that only existing Federal land will be used for the military buildup.

The reason to dismiss the Tarague site without undergoing the step 2 alternative analysis is suspect. Because it is not being explored as an alternative and a vague reason given for dismissal, it leads us to believe that the military is only trying to protect something. I venture to say that it could be the panoramic view and pristine beaches, parks and recreational facilities that military, dependents and their guest enjoy. If this is so, to take away more land from the people of Guam is unconscionable.

You should not take lightly the fact that a viable alternative within the military reservation has been dismissed. You have a duty to inform the approvers of the EIS prior to the Record of Decision that there are other viable alternatives besides the East Coast alternative even if the Tarague alternative possesses some constraints. I call upon the decision makers and responsible Federal officials and military leadership to challenge their planners and staff to make this alternative work for the military.

on the west coast. Secondly, higher density civilian development in vicinity of ranges increases risk of encroachment.

#### I-129-003

Thank you for your comment. The Tarague alternative was eliminated for the following reasons. It could accommodate KD rifle ranges, but not the machine gun range because of the size of the SDZ area required. There would be a significant amount of excavation required to create the range topographic profile and to construct the steep access road to the range. In addition to the potential erosion control issues associated with the extensive grading, cultural and natural resource sites would be impacted. The Air Force did not support this alternative because the Marine Corps training schedule would conflict with Red Commando Warrior training at the existing range; the range would eliminate recreational use of the Tarague Beach; and encumber Pati Marine Preserve. Further, the increase in transiting traffic could negatively impact nearby endangered species recovery efforts.

#### I-129-004

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (housing, Won Pat International Airport), the firing range could not be placed on DoD lands, including Tarague. Tarague in particular could accommodate KD rifle ranges but not the machine gun range because of the SDZ area required. Discussion on the screening process associated with the firing ranges has been clarified in the FEIS.

I-129-005

The only two alternatives offered for training ranges are in the East Coast of Guam and is really just one alternative. In reality it is an alternative within an alternative. The only real difference is the rerouting of Rt. 15 and number of acres. This is the only alternative that received a step 2 alternative analysis because all other military sites were dismissed.

The two alternatives presented in the DEIS appears to take the easy way out. As a matter of fact, the impact tables shown in the DEIS seem to communicate that in all assessment categories there were no real impact. Very one sided, if you ask me. All in favor of the preferred alternative which is the East Coast alternative.

I-129-006

Contrary to the impact analysis of the DEIS of the East Coast alternative, many families and users of the land within the area will be impacted. Although the land tracks are few, many people are affected. There are literally hundreds and hundreds of families that will be denied use of their family and ancestral lands. Thousands of race car enthusiast and fans will not be able to enjoy the entertainment and recreation that it already provides. Hundreds and hundreds of local, military and tourist will be restricted or not be allowed to hike to natural caves and coast lines. The potential of these lands are starting to manifest themselves. Mining of gravel to make concrete for homes and roads in support of the growth of Guam, installed infrastructure for a private golf course already exist, paved roads, power poles, and water wells that are in place but capped, all are value added to the area. All these and more are signs that the land within the East Coast alternative are viable and have potential to provide good things for Guam. It would be a travesty to use it for military training and ranges.

I-129-007

The Military buildup is so large of a project that it warrants close scrutiny and review. The consolidation of all the military buildup projects into one DEIS document serves no justice for the environment, military and the people of Guam.

As I go over the DEIS I noticed a pattern of cut and paste. Many of the writings are used typically in every volume. This indicates to me that the level of effort and scrutiny needed to produce a good EIS might have been jeopardized. Each major project should be a stand alone project with its own EIS so it receives a good review and all viable and

I-129-005

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (such as housing, Won Pat International Airport), the firing range could not be placed on DoD lands. Other locations on non-DoD lands were eliminated because of topography or settlements. The remaining alternatives, although located in proximity to each other do have different impacts in terms of cultural resources, socioeconomic resources, and biological resources.

I-129-006

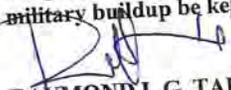

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-129-007

Thank you for your comment. The proposed actions are complex, inter-related, multi-service proposals and are not discrete individual actions of the different military services. The National Environmental Policy Act specifically prohibits segmentation of a large proposal into smaller actions for environmental analysis. As this EIS shows, the proposed and

feasible alternatives explored and weight so the best decision is made. It is evident by some of the tables that the buildup will have little to no impact on our environment or people. The impact tables are too supportive of the buildup that almost nothing is affected. The DEIS is so voluminous that short cuts could have been taken just to end the misery of preparing such a large document. I urge you to relook the DEIS as it is prepared. The DEIS should be redone with the approach of one project – one EIS. Although there is a sense of urgency to get the DEIS approved, you must also recognize that we can only do this once. Once you take our lands away, we lose it forever.

I want to thank the panel for the opportunity to submit my input to the DEIS. I hope that you will appreciate the points made in this presentation and take appropriate action to examine the process and out come of the DEIS as it is presented. Moreover, that this presentation and others like it will influence the decision makers and our people's resolve that no more private land be taken and that the military buildup be kept within property boundaries of the military.

  
RAYMOND L.G. TAIMANGLO  
Colonel, U.S. Army (Retired)

related actions clearly are having effects on the same resource areas and must be considered together to determine the full potential for environmental effects. Further, a comprehensive analysis helps define the best mitigation and management practices to lessen adverse effects.

The DEIS was broken down by Volumes for each major action, and the Executive Summary provides an overview of the proposed actions to facilitate readability. The DEIS was developed with the intent to balance readability with sufficient technical information. There is some duplication of information in the volumes to reduce the need for a reader to search another volume for cross-referenced information.

#### I-129-008

Thank you for your comment. The proposed actions are complex and have many components. In order to characterize the affected environment and potential impacts, sufficient detail needed to be included in the Draft EIS. The Draft EIS was broken down by Volumes for each major action, and the Executive Summary provides an overview of the proposed actions to facilitate readability. The Draft EIS was developed with the intent to balance readability with sufficient technical information.

ORIGINAL

RESOLUTION NO. 258

WRITTEN TESTIMONY ON THE MILITARY BUILD-UP  
POSITION – NOT IN FAVOR

PREPARED BY: ALBERT S. TOPASNA  
PRIVATE INVESTIGATOR  
P.O. Box 3671 AGANA GUAM 96910

0136

I-130-001 QUALIFICATION

First, let me introduce myself, I am ALBERT S. TOPASNA, a private investigator who specializes in forensic investigations. My strong opposition to the military build-up is historical, the citizens of this island currently await the privilege and authority to vote for **THE PRESIDENT OF THE UNITED STATES**. The citizens of this island also await their **WAR REPARATION**. Lastly, the citizens of this island do not understand **NATIONAL SECURITY** but are fed up with the word **NATIONAL DEFENSE**.

I-130-002

Just as important, is the word land ownership. Just as important I am deeply bothered that the citizens of this island continue to be threatened by the definition of **SUPREMACY CLAUSE**. Guam is a U.S. territory not a state of the union as in the 50 states.

Black's Law dictionary defines **SUPREMACY CLAUSE** to be only applicable to a state. Guam is not a state.

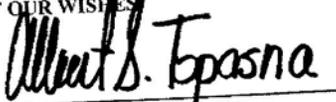

How dare, the Unites States of America direct its foolish implementation of the **COMDEMNATION PROCESS** as well as the repetitive **EMMINENT DOMAIN**.

I-130-003

As law makers, where do you stand? Are you inventing **DEMOCRACY** and are you also ignoring the **DUE PROCESS OF LAW**? Congresswoman from Guam, what is your position? Senators, what is your position? Before I continue, it is important that we all understand as citizens of this island if we are to be victims of **NATIONAL SECURITY** or **SLAVES OF NATIONAL DEFENSE**. (FOREVER)

The United States of America contributes billions of dollars to protect reckless nations and those who oppose democracy. The missing puzzle is this, what are you senators going to do about this in justice? I foresee the future of this island to depict limitless and irresponsible Washington philosophies and mandates. It is about time that private land owners need to be protected and not compromised.

It is by your powers given by the people of Guam to be liable and responsible for the good and protection of its citizens. Do not allow this island to be a world enterprise as well as **THE TARGET FOR AMERICA** because we lack true representation and continued ignorance, negligence and misrepresentation. We as citizens of Guam also believe in **democracy, justice and servitude**. Please remember the many sacrifices from our men and women in uniform. Blood has no price. **GUAM IS NOT FOR SALE. RESPECT OUR WISHES.**

  
ALBERT S. TOPASNA

“ YOU MUST FIRST BUILD IN BEFORE YOU BUILD UP”

I-130-001

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

I-130-002

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

Pub. 226.

I-130-004

LAND TRANSFER—GUAM  
CHAPTER 485—PUBLIC LAW 225

0137

[S. 1362]

An Act to authorize the Secretary of the Navy to transfer land for re-  
settlement in Guam, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of  
America in Congress assembled, That:

For the purpose of effecting the rehabilitation and resettlement of the  
residents of Guam, the Secretary of the Navy, or such officer as he may pre-  
scribe, is hereby authorized to transfer to the naval government of Guam, to  
for transfer or sale by the naval government of Guam at its discretion, to  
such persons and upon such terms and conditions and at such times as it  
may determine to be suitable, in replacement of lands acquired for mili-  
tary or naval purposes in Guam, such lands owned by the United States  
in Guam as may be determined by the Secretary of the Navy, after con-  
sultation with the Secretary of War, not to be required for military or  
naval purposes.

Approved November 15, 1945.

I-130-003

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

I-130-004

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-131-001

Good Evening Mayor Lizama, General Bice & friends.

I am here tonight to address a very serious issue, an issue that, according to General Bice, within media statements, feels is something we should not be so upset about. He believes the public should relax; because "it is just two or three families" being affected by DEIS plans. This morning's paper claimed that 3 landowners have negotiated with the military. If it is just two or three families, and you have already negotiated with three, who are all these landowners in the audience saying they will not negotiate? When you say "2 or 3" families on Guam, you are not just speaking about three man'amko. You are speaking of countless children, grand-children, siblings, nieces and nephews whom segments of that land are intended for. Look down upon Sasayan valley. That beautiful expanse of land is not owned by three individuals. And the people should not relax; because this is the most important issue for a tiny island, already lacking untouched precious land.

General Bice should not feel confident that he will find a compromise; because there is no compromise. There is only my decision: that you will find some other place, that you already own, to have your firing range, throw grenades and dump your toxic waste on. There is no compromise because this is not about money. There is no "fair market value" for something that is not on the market, not fair and incapable of holding numerical value. There is no number to adequately address the wealth of my home, which is given freely (and with love) to friends who seek its gifts. The coral is white gold, the live stock so abundant there, has never been given at charge... it has always been shared with those who need it. The medicinal herbs are free to those who come looking for cures. The

**I-131-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances

I-131-001

colorful vegetation is there for the taking of all who wish to decorate their belens or fatimas with lumot in worship. I have the space, that according to your documents, many do not have; but when it is mine, **many** have access to it. Will you promise all those people the same? I do not believe you will. If this was about money, I would have sold it years ago. How many times has this family been asked to sell? Many; and we have always said no! We will teach our children to say no! You will hear our children say no today! The price offered by developers will exceed any price you would offer us. If it was about money, you would not be who we negotiate with. We would negotiate with someone who was required to barter fairly, because they did not have the capability of ultimately taking it by force if we could not reach an agreement. This confidence projected by General Bice must be called what it is, a *military public relations campaign*.

If the military seeks to appear humanistic, if you want to help us see your humanity; it is not by having a caterer bring dinner to a public hearing, it is by making use of your own resources before taking the resources of those around you. The military is a city in itself on this island! The military has the best beaches and recreation sites, the best shopping, movies, the commissary, fast food outlets, golf courses, housing and health care, child care and schools (none of which are over crowded). ***You have everything you need; and there is no excuse for you to go beyond your fence.*** You cannot shove more locals off the space you want to use for relaxation and targeting activities. Your main cantonment plans call for wide open green space within your neighborhoods. Have you looked at the

I-131-002

operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

### I-131-002

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

It is also noted that the military base, in itself, is a community. It includes military personnel, housing for the military and their dependents, medical and dental facilities, discount stores, recreational areas, and schools. These are provided for the benefit of the military personnel and their dependents.

**I-131-003**

amount of wide open green space left for some of our children in Dededo and Yigo? When you put your migrant workers there, how much wide open green space will they have? Your children already play on the whitest sands and swim in the cleanest waters. Your children already have the nicest and safest playgrounds. You claim to want to help us feel united, you want to be seen as an institution that helps us form "ONE GUAM." Your plans only create the divisiveness you are warning others not to provoke.

**I-131-004**

As long as your formula for unity involves having "them" agree with "us"; and as long as becoming "us" requires joining "them," then you will ALWAYS facilitate divisiveness. The children and young people who are here, do you honestly think that they will look back on this situation and see themselves as one with you? After they have seen how "they" make plans for "us?" No. These are not hard concepts to understand. This 11,000 pages of DEIS jargon, is it a unifying document? You tell us how convenient it is because it is also on the internet. Many homes here don't have internet! Even some of our schools do not have internet! The expectations you have exceed the availability of resources on this island.

**I-131-005**

My conclusion is one of strong opposition to the taking of my home through

**I-131-006**

condemnation or any other method. I will also recommend that those who are already recognized as under the poverty level be provided better financial assistance for the availability of water, power and medical needs. You will also have your final draft

**I-131-003**

Thank you for your comment. The military base, in itself, is a community. It includes military personnel, housing for the military and their dependents, medical and dental facilities, discount stores, recreational areas, and schools. These are provided for the benefit of the military personnel and their dependents. The cohesion of the military base, like any social group, is based on the similarity of their jobs and duties, objectives, age, situation, and other military affiliation. Subsequently, their similarities and benefits within the base are not the principal reasons for what appears to be "a separation from the local community." DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-131-004**

Thank you for your comment. In addition to being available on a website, the Draft EIS is also available for review at a number of libraries. Although we have made every attempt to break the Draft EIS into small electronic files to facilitate download and review on the website, time to download chapters will vary depending on the internet connection. The executive summary gives a quick overview of the Draft EIS and is relatively small in file size.

**I-131-005**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek

I-131-007

consider the opportunity for the United States military to return unused lands to the original land owners and their descendants.

I-131-008

This government is funded by currency carrying the words: "In God We Trust." I trust in God; but can I trust in General Bice and the Federal Government? We trust in God; but can we trust our local leaders? Can I trust in a final report that is focused on the benefit and the wellfare of the future generations who will inherit this island? God help Guahan.

Si Yu'us Ma'ase,

Gloria B. Nelson

agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-131-006

Thank you for your comment. Although overall funding of Guam social services are important issues they are not part of the proposed action. However, DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam and the provision of social services. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. It is also noted that while some improvements that also benefit the new population can be made, many of the facilities and services provided on base are benefits the military and their families receive similar to other U.S. bases. The larger community that the base is within benefits because of DoD expenditures, personal expenditures, jobs (direct and secondary), businesses supported, and taxes and other fees that would go into Guam's general funds.

I-131-007

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. DoD is confident that all parties can reach agreement on any potential

land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-131-008**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. Comments received from the public allow DoD to make changes to the EIS before the document is finalized. This information becomes part of the Final EIS and is evaluated when DoD issues a Record of Decision at the end of the NEPA process. The DoD has made every attempt to provide a complete review of potential positive and negative impacts from the proposed relocation.

Thank you for your comment. On-base recycling programs are currently active, especially at Andersen Air Force Base. These initiatives would be expanded to include the Marine base as well as expanded for Andersen and the Navy. We would be very interested to consider the example you mention: South Korea's Halla. It is assumed that you are referring to Halla Energy & Environment as found on the web: <http://www.hallasanup.com/eng/main/main.asp>.

I-133-001

*I am a 38-year old female, born and raised on Guam. I was fortunate enough to be educated in Boston (for undergraduate education) and in San Diego (for graduate law school). I've been fortunate enough to enjoy the freedoms associated with being a United States citizen. Included in those freedoms is the right to free speech. I cringe when I hear all the negative comments regarding the pending military build-up. I cannot believe comments that the United States is "taking over" the island of Guam. Such comments directly conflict with the democratic process that the United States was founded upon. I want to continue to enjoy my lovely island of Guam for all that it is and all that it can be. I also want to continue to enjoy the privileges and freedoms as a US citizen. How can the military build-up peacefully co-exist with the environmental and socio-economic goals of the Chamorro people? I truly believe - in my red-white-and-blue heart, that this build-up is a win-win situation. Please limit the taking of land. Please consider the increases on uninhabited islands. Please help us help ourselves by providing guidance and funds for our sagging infrastructure.*

\*\*\* Please Print Clearly\*\*\*  
Please, Uncle Sam, come back to Guam.

Thank you for your comment. DoD is committed to substituting less hazardous/toxic substances for herbicides, pesticides, fertilizers, etc. where feasible. When this is not feasible, DoD limits the use of such hazardous substances to the greatest extent practical. In addition, there are numerous best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of these or other hazardous/toxic substances. These actions designed to protect public health, welfare, and the environment include, but are not limited to:

- personnel training for the handling of herbicides, pesticides, fertilizers, and other hazardous substances.
- the use of various engineered solutions including secondary containment, leak detection and monitoring systems, the use of inventory records and use records, etc.
- the use of spill prevention, control, and countermeasures (SPCC) plans and hazardous materials management plans (HMMPs) and hazardous waste management plans (HWMPs).
- waste minimization plans and the use of alternative, less toxic substances where feasible.
- proper transportation, handling, storage, use, and disposal hazardous substances protocol and directives. These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of herbicides, pesticides, fertilizers, or other hazardous substances.

I-135-001

Thank you for your comment. DoD takes full responsibility for the identification and remediation of hazardous waste sites that have resulted from its past operations and is in the process of actively remediating various such sites in Guam. Volume 2, chapter 17 summarizes the status of many of these active hazardous waste sites. In addition, Federal, local, and territorial laws and regulations mandate that such hazardous waste sites that resulted from DoD operations be investigated and remediated as appropriate. DoD will comply with all applicable laws and regulations while conducting its operations on Guam.

I-135-002

Thank you for your comment. Topics such as past nuclear testing are important issues but are not part of the proposed action and are thus not addressed in the EIS.

I-136-001

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see FEIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the FEIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

Please consider using excess dredge material from Apra Harbor for beneficial uses such as beach replenishment for some of Guam's beaches that have mostly coral rock; INSTEAD of ocean disposal. In the final EIS <sup>plan</sup> please let me know your plan for the dredge material.

(61) Robin Margwardt  
777-7564

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-139-001

Thank you for your comment. The DoD is considering several options for disposal of dredged material, including upland placement, ocean disposal, and beneficial uses, as discussed in the EIS. Using dredged material for beach renourishment would depend upon the compatibility of the dredged material with the existing sand/rock on the beach and whether the beach is suitable for renourishment. Other potential uses are described in Chapter 2 of Volume 4 of the EIS. While beneficial reuse is a priority for the DoD, the final decision on dredged material management will be made during the final design and permitting process.

COMMENT SHEET

Draft Environmental Impact Statement/Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation

Please Circle Meeting Location: University of Guam Southern High School  
Okkodo High School Yigo Tinian Saipan

The Department of the Navy (DoN) and the Joint Guam Program Office (JGPO) invites your comments on the Draft EIS/OEIS for the Guam and CNMI Military Relocation. Please provide your comments below. Comment forms, or your own letter, will be accepted at the public hearings, or may be mailed to: JGPO, c/o NAVFAC Pacific, 258 Makalapa Drive Suite 100, Pearl Harbor, HI 96890-3134, Attention: GMPO. You can also visit [www.guambuildups.us](http://www.guambuildups.us) to comment. Comments must be postmarked by February 17, 2010 Eastern Standard Time. Copies of the Draft EIS/OEIS are available for review at Nieves M. Flores Memorial Public Library, University of Guam Robert F. Kennedy Memorial Library, Joelen-Kiyu Public Library, Northern Marianas College Olympio T. Borja Memorial Library, and the Tinian Public Library. A DoN sponsored reading room has also been set up at Agaña Shopping Center for Draft EIS/OEIS review.

Please provide your comments below:

I-140-001

Only the "NO Action"

Alternative" is feasible

for the people of

Guam.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-140-001

Thank you for your comment. The purpose of the EIS is to document the affected environment, describe potential environmental consequences and mitigation measures, and provide concerned citizens, stakeholders, and other interested parties an opportunity to voice concerns regarding the potential actions described in the EIS. Your comment has been noted.

**Guam Buildup**

**I-141-001**

After reading the yahoo news article, I think that the best option for Guam and the U.S. military would be to build enough housing on the bases, so that the local rent market is not over-priced as was done in Hawaii. More people on Guam will benefit from lower rent prices than would benefit from higher prices. Democracy serves the many rather than the few.

**I-141-002**

Also, Guam and the U.S. military would benefit from keeping their people housed on the bases by not adding to traffic congestion in the morning and afternoon rush hours.

I was attached to Fleet Air Reconnaissance Squadron Three (VQ-3) at NAS Agana from 1977-1981 and again at NAS Agana from 1989-1993. When you need your people in for work/flight, the mission requirements do not allow for its people (especially key personnel) to be stuck in traffic holding up a mission. The same could be said for the civilian business community.

The yahoo news article stated that high housing costs and traffic congestion were two major reasons that affected people's happiness.

Sincerely,

Cole Herndon

**I-141-001**

Thank you for your comment. It is expected that all new military personnel and their families will live in on-base housing. (This will be implemented by not providing rental allowances to military personnel for housing outside the base.) Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study, Section 4.3.2 for further information.

**I-141-002**

Thank you for your comments. Relocating Marines and their dependents are expected to be housed on base according to the preferred alternative. There will be peak hour traffic associated with the base due to off-base military employees coming to work and dependents that may work off-base. Additionally, some Marines will work at AAFB and South Anderson which will contribute to peak hour traffic.

## Happiest States Revealed by New Research

LiveScience

Jeanna Bryner  
Managing Editor  
LiveScience.com

Thu Dec 17, 2:05 pm ET

Ever wondered if you'd be happier in sunny Florida or snow-covered Minnesota? New research on state-level happiness could answer that question.

Florida and two other sunshine states made it to the Top 5, while Minnesota doesn't show up until number 26 on the list of happiest states. In addition to rating the smile factor of U.S. states, the research also proved for the first time that a person's self-reported happiness matches up with objective measures of well-being.

Essentially, if an individual says they're happy, they are.

"When human beings give you an answer on a numerical scale about how satisfied they are with their lives, it is best to pay attention. Their answers are reliable," said Andrew Oswald of the University of Warwick in England. "This suggests that life-satisfaction survey data might be very useful for governments to use in the design of economic and social policies," Oswald said.

The happy-states list, however, doesn't match up with a similar ranking reported last month, which found that the most tolerant and wealthiest states were, on average, the happiest. Oswald says this past is based on raw averages of people's happiness in a state, and so doesn't provide meaningful results.

"That study cannot control for individual characteristics," Oswald told LiveScience. "In other words, all anyone has been able to do is to report the averages state-by-state, and the problem with doing that is you're not comparing apples with apples because the people who live in New York City are nothing like the individuals living in Montana."

Rather, Oswald and Stephen Wu, an economist at Hamilton College in New York, statistically created a representative American. That way they could take, for example, a 38-year-old woman with a high-school diploma and making medium-wage who is living anywhere and transplant her to another state and get a rough estimate of her happiness level.

"Not much point in looking at the happiness of a Texas rancher compared to a nurse in Ohio," Oswald said.

The happiest states:

1. Louisiana
2. Hawaii

[http://news.yahoo.com/s/livescience/20091217/sc\\_livescience/happieststatesrevealedbynewr...](http://news.yahoo.com/s/livescience/20091217/sc_livescience/happieststatesrevealedbynewr...) 1/4/2010

0176

3. Florida
4. Tennessee
5. Arizona
6. Mississippi
7. Montana
8. South Carolina
9. Alabama
10. Maine

The scientists caution, however, that the top spot, Louisiana, might not reflect current levels of well-being since the data were collected before the disruption caused by Hurricane Katrina. They are confident that data for the other states does accurately reflect happiness levels.

See the full list of 50 states (and the District of Columbia) [here](#).

#### Happiness measures

Their results come from a comparison of two data sets of happiness levels in each state, one that relied on participants' self-reported well-being and the other an objective measure that took into account a state's weather, home prices and other factors that are known reasons to frown (or smile).

The self-reported information came from 1.3 million U.S. citizens who took part in a survey between 2005 and 2008.

"We wanted to study whether people's feelings of satisfaction with their own lives are reliable, that is, whether they match up to reality - of sunshine hours, congestion, air quality, etc - in their own state," Oswald said.

The results showed the two measures matched up. "We were stunned when it first came up on our screens, because no one has ever managed to produce a clear validation before of subjective well-being, or happiness, data," Oswald said.

They were also surprised at the least happy states, such as New York and Connecticut, which landed at the bottom two spots on the list.

"We were struck by the states that come at the bottom, because a lot of them are on the East Coast, highly prosperous and industrialized," Oswald said. "That's another way of saying they have a lot of congestion, high house prices, bad air quality."

He added, "Many people think these states would be marvelous places to live in. The problem is that if too many individuals think that way, they move into those states, and the resulting congestion and house prices make it a non-fulfilling prophecy."

Would you be happier in another state?

Using both the subjective well-being results, which included individual characteristics like demographics and income, and the objective findings, the team could figure out how an individual would fare in a

[http://news.yahoo.com/s/livescience/20091217/sc\\_livescience/happieststatesrevealedbynewr...](http://news.yahoo.com/s/livescience/20091217/sc_livescience/happieststatesrevealedbynewr...) 1/4/2010

0177

particular state.

"We can create a like-to-like comparison, because we know the characteristics of people in every state," Oswald said. "So we can adjust statistically to compare a representative person hypothetically put down in any state."

This new research will be published online on Dec. 17 by the journal *Science*.

Larry Kasterbauer

I-142-001

I am a resident of Gugugon, which is adjacent to Toquac, Hapodu and Pugua, which is where the Naval Communications is located. I have been a resident of Guam for over 43 years. My wife's family are the Arteros. Prior to the war, all of the land occupied by NCTAMS and UPI, where AAFB is located was theirs. My wife and her family hid Navy men George Ray Tweed for nearly 22 months on their land where NCTAMS is now located. Following the war all this property was taken from them. Family members currently own a tiny sliver of property across Route 3, where the McDonalds restaurant is located. It is very difficult to look across Route 3 knowing it is occupying land taken from my wife's family and unused all these years since it was taken. Why wasn't that land given back to the family since it wasn't needed for military purposes? I now ask- what is the future plans for the McDonalds restaurant? There must be only one answer- and that is, bulldoze it or fence it in since the land it's on was taken for military purposes. To make further insult to injury, the aviation fuel line is located on our tiny sliver of property across the road from McDonalds restaurant. One member of the family that did not have authority to sign away the property to the military following the war, yet the 60 foot floating easement continues to exist on our tiny sliver of land. We own the land and we pay property tax to the Government of Guam for perpetual easement land. I am extremely concerned for the security of this whole military operation. Because this pipe is located on our private property and other Government of Guam property. There are no Marines guarding this fuel line because its on our private property. Yet, across Route 3 the Marines will be guarding every inch of the Naval Communications, which will be fenced in. This fuel line provides all the fuel for all the planes and other aircraft that will be coming and going from Northern Guam. With billions of dollars being spent on this relocation effort, why not move this fuel line to the military side of the road so it can be properly guarded?

I-142-002

The smaller parcel of land referred to Potts Junction, is located on the civilian side of Route 3. This land has not been used for military purposes since the aviation fuel tanks were removed nearly 20 years ago. To at least show good will, return

I-142-001

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

I-142-002

Thank you for your comment.

I-142-003

this small parcel to its original land owner. And whatever may be planned for its use incorporated in the planned for the use of the thousands of acres for the military side of Route 3.

I-142-004

Currently, helicopter heading toward AAFB avoid flying over Naval Communications Station but fly over our small sliver of land over Route 3. I seriously doubt helicopters have the same flight path as B52s. I understand that planes from Andersen are required to fly around the bird preserve at North West Field in order to avoid endangered species. Yet they fly over our homes and rattle our windows and doors. Are there plans to sound proof our houses or fly over NCTAMS?

I-142-005

We understand that Route 3 is going to be widened. No private land or Government of Guam land must be taken. The widening of the road must absolutely come from the military side of Route 3. As this Route 3 widening takes place we will need access from Route 3 to our property next to Route 3. This is a must and it can be achieved by building a inner road adjacent to Route 3.

I-142-006

Tweeds Cave, as previously mentioned, is located on NCTAMS must be established as a historical preserve. In addition, any ancient Chamorro artifacts must not be taken from the island. And those already that have been taken must be returned to the island.

I-142-007

A subject matter expert informed me that by the year 2014, there would be over 30,000 on Guam who have come here as a result of the buildup but are not military personnel or dependants. And most likely a large percentage will come from the Federated States of Micronesia. These Compact of Free Association citizens should be allowed to utilize Naval Hospital and DoD schools, rather than to further overcrowd local hospitals and schools. The expert was unable to tell me what percentage of these 30,000 plus people will reside. I want to know if the majority will be living in Northwest Guam. Everyone knows they will not be evenly distributed throughout the island. In other words, the population of western Dededo will more than double with the influx of these of people near NCTAMS and impact our schools and the lives of us who live in this area.

I-142-008

We have been informed that the buildup will create a large number of jobs for our people, yet, probably the majority of the people working at this public meeting are from off-island. When i have gone to the various stations asking questions, the general response is for me to write it down and submit it. With all due respect, as a local person I think I could have given that answer myself. How can we have confidence that the buildup will result in a lot of new jobs when it didn't even create jobs for this meeting?

I-142-009

Thank you very much. I've given written testimony at previous meeting about this buildup and I've given written testimony as well as had a staff member at the meeting type for me while I've dictated my concerns and have never heard anything back. I sincerely hope this will be different. I can be reached by phone at 671-632-0431 or by email at ababangk@yahoo.com. My mailing address is PO box 20434, Barrigada Guam 96921.

### I-142-003

Thank you for your comment. The Potts Junction parcel is required to support the proposed action and would not be released by the federal government.

### I-142-004

Thank you for your comment. Planned helicopter operations would not be increased over NCTAMS as a result of this action. At this time there are no plans to soundproof homes at NCTAMS.

### I-142-005

Thank you for your comment. The proposed widening for Route 3 will remain within the existing right-of-way on the eastern side (civilian side). The acquisition of land for the widening will occur on the western side (military side).

During construction, proper traffic control will be in place to allow access to properties within the project limits.

### I-142-006

Thank you for your comment. Construction and operations associated with the Build Up will not disturb Tweeds Cave. Artifacts excavated as part of the studies for the EIS will remain on Guam and will be curated in facilities that meet federal standards for curation. A curation study is presently underway to determine the appropriate curation facilities on Guam.

### I-142-007

Thank you for your comment. It is uncertain what part of Guam new residents will live in. The northwest portion of Guam is where most of the construction will take place and it is likely that this is where the new population will reside or work. The new population (the 30,000 plus

which you refer to) is considered indirect, which means they will not be working on DoD project construction; rather, they are expected to work in the retail, and other service industries such as health services. Currently, jobs like this are located around the middle of the island which would allow a wide range of areas for the new population to live in and have a reasonable commute to work.

The indirect and induced population (as well as the direct population) created by the proposed action would pay taxes, licenses, and fees that would be part of the government revenue. This would offset some of the costs needed to support governmental services such as medical and public schools.

**I-142-008**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

**I-142-009**

Thank you for your comment. All comments and responses are published in Volume 10 of the Final EIS.

Oral Comments  
Guam  
18 June 2007

Cole Herndon

I-143-001

Concern is the Brown Tree Snake. Watched a program on PBS called Nature. The documentary discussed how the Vietnamese farmers ate all the snakes around their farms, which caused the rat and mice population to explode. The rats and mice then ate all the crops. The government of Vietnam then had to reintroduce the snakes back into the area to control the rats and mice. Do a Google search to confirm the PBS story.

If DOD plans to eradicate the snakes on Guam, then they need to also make sure that they have a plan to target the mice and rats just as aggressively as their snake eradication program. After all, USDA uses mice to attract the Brown Tree Snakes to their traps which proves how valid the snake is at killing mice.

I have personally seen what rats and mice can do to electrical wiring on numerous occasions. They chewed up the insulation on the wiring which can cause shorts, and I never had that problem with the snakes.

I live next to a chicken farm which attracts the brown tree snakes that surely hasn't eradicated the chickens to any large degree. I have even had a couple of snakes inside my house. I can live with the snakes (even inside the house) but I cannot live with rats and mice which makes my skin crawl.

Another consideration is that half of Europe was wiped out by diseases carried by mice and rats during the Middle Ages. I don't think that the Brown Tree Snake carries any disease.

ENCLOSURE (1) 2 pages Historical perspective of rat problem on Guam.

ENCLOSURE (2) PBS program "Nature." 2 pages

ENCLOSURE (3) 3 pages Mice + Rats cause house fires, consume + contaminate food, transmit diseases.

ENCLOSURE (4) 2 pages Up to  $\frac{1}{2}$  of Europe was killed from fleas found on rats and mice.

I-143-001

Thank you for your comment. Although specific mitigation for impacts are still being discussed with the U.S. Fish and Wildlife Service, it is unlikely the EIS would include a proposal to eradicate brown tree snakes over any large areas of Guam. If so it would address potential problems due to rats and mice.

Commonwealth of the Northern Mariana Islands

*Enclosure (1) page 1 of 2*

As a naval officer, Smith saw the value of military discipline. He established universal military training on Guam three weeks before the United States entered the war. The September 1918 *U.S. Naval Institute Proceedings* included an account of his "movement," as he termed it, the main idea of which was "to improve the economic situation of the inhabitants of the island; indirectly to fit them to be taken over as soldiers, should their services be needed. The movement at present is one of training only and not of military service." Smith noted that the Chamorros "are naturally bright. . . . They have sometimes been called lazy, but idle would be a better word." As a mechanism to stimulate their natural abilities and improve the island's productivity, he believed that "military training promised most."

The concept was an outgrowth of the Guam Cadets, an organization that was formed by a group of youths and eventually served to furnish most of the officers and noncommissioned officers of the militia. Soon, some of the older men of the island suggested that it would be a good idea for the schoolboys and younger men to be given some of this systematic physical and military training. Thus, on February 8, 1917, universal military training was initiated by Executive General Order No. 225, which established the Guam Militia effective March 15, 1917. Smith wrote: "There will be in time fully 2,000 well-drilled infantry and artillery, available for any use that seems expedient."

A year later, in the same journal, Smith described how American rule on Guam had changed the island from an agricultural economy to one based on wages. He noted that a 1916 article had concluded that "agriculture had almost ceased to exist, on account of wages paid to laborers by the government and food shipped to the island by army transports. The wages enabled the natives to buy imported food, and the food shipped by the supply department for the American garrison lessened the local demand." Smith added his own thoughts: "Whatever the future of Guam, the island should be cultivated to its full capacity. This will be true whether it is to be utilized as a naval base of the first order, or is simply to be administered for the benefit of its inhabitants."

The governor had a multifaceted program to revitalize agriculture on Guam. His first move was an anti-rat campaign. "In a period of 29 months," he reported, "from September, 1916, to February, 1919, the total number of rats destroyed has been 1,783,937; iguanas 51,516." Next, he created a farmer's market, which was assisted by government

---

transportation from the farms to the government-built market. To really stimulate agriculture, he began what was to become an annual industrial and agricultural fair. So enthusiastic was he about the fair that he even proposed that the island government buy all the desirable industrial exhibits and sell them later in a government store.

Smith also wrote a more civilian-oriented article that was published in *Asia* magazine in April 1920. Of his experience as governor of Guam he allowed that "while the usual safeguards of personal liberty cannot be decried, autocratic power seems at times necessary to handle certain situations, when it may become very effective." Of his combined legislative, executive, and judicial role, he said, "To govern a little kingdom of 15,000 persons under such conditions is really an interesting task."

The "Americanization" of Guam was certainly not accomplished during the first twenty years of American rule. Nor has it been completed today. But the U.S. naval administrators on Guam achieved much toward this end during their first two decades. From the day Governor Leary received his assignment from President McKinley, the naval governors of Guam had been charged with the responsibility of "benevolent assimilation," of gradually bringing the Guam Chamorros into the American fold.

To accomplish this, the Chamorros were taught the English language, American history, and the rudiments of American political and economic practices. They proved to be good students, and learned their lessons well, both at school and in the government offices. But at home they practiced and maintained their Chamorro culture through their language and customs.

Although the Chamorros never became culturally Americanized, they did adopt many American customs. They learned the lessons necessary to succeed under the new American administration. And most important, they learned how the American political system worked, and quickly became very adept at using it.

It seemed like a good idea at the time. A worker at a Florida dog kennel noticed dozens of snakes living in the rafters and crevices, and decided the reptiles had to go. Working systematically, he killed until none were left.

Then came the plague of rats.

ENCLOSURE (2) page 1 of 2

<http://www.pbs.org/wnet/nature/episodes/the-reptiles-snakes/saving-snakes/2911/>

5.01.2010

0193

"The rat population exploded," a state biologist reported later. "It took two years, hundreds of people-hours, and thousands of dollars to get control of the rats and repair the structural damage." This does not include the hundreds of pounds of dog food that the rats ate and contaminated. The economic cost of removing the rats' natural predators was obvious.

As part II of NATURE's *The Reptiles* series shows, snakes are often hated and feared. Many are killed for no good reason. But there are good reasons to keep the long sliders around your home or garden. They can keep pests, such as rats and mice, in check. And some species that are harmless to people prey on poisonous snakes, reducing the chance of a deadly encounter.

In some parts of the world, the benefits of snakes are now being recognized. In Vietnam, for instance, biologists are reintroducing rat-eating snakes to some villages in an effort to protect harvested grain. In India, certain snakes are kept as good luck charms partly because they are believed to repel deadly cobras. And in the United States, biologists are spreading the word about the good points of scaly predators in a bid to protect these important predators. A single black snake, for instance, can eat dozens of rats a year.

Snakes can be useful in controlling rat populations.

Not every snake eats every pest. Instead, many have evolved to feed on specific prey. Gopher snakes (also called bullsnakes), for instance, mostly prey on rodents, but also eat birds, eggs, and some lizards. Rubber boas are known to feed on other snakes, mice, birds, and lizards, as well as worms, slugs, and insects. The hognose snake, famous for its ability to puff up in order to scare off attackers and then "play dead" if it doesn't work, eats toads. Small snakes, such as green snakes, garter snakes, and ring-necked snakes, hunt insects. Some even specialize in daddy long-legs!

Of course, even the humblest snake may hiss, coil, puff up, or bite if confronted by a person. Indeed, these behaviors can scare people and endanger the snake. But if you encounter a snake, biologists say, the best thing to do is leave it alone. Or risk facing a plague of rats.

Knock'em dead everytime with this Suicide Rodent Solution!!!

- THE FACTS
- TRAPPING OPTIONS
- ULTIMATE SOLUTION

#### DISEASE & HEALTH CONCERNS

Mice transmit diseases, most notably:

- Salmonellosis - bacterial food poisoning, infection with or disease caused by bacteria of the genus *Salmonella* typically marked by gastroenteritis but often complicated by septicemia, meningitis, endocarditis, and various focal lesions (as in the kidneys) when food is contaminated with infected rodent feces.
- Other diseases include: Lymphocytic - of or relating to lymphocytes, "lymphocytic leukemia",
- Rickettsialpox - a disease characterized by fever, chills, headache, backache, and a spotty rash, caused by a bacterium of the genus *Rickettsia* transmitted to humans by the bite of a mite of the genus *Allodermanyxus* living on rodents such as the house mouse.
- Leptospirosis - Any of a group of infectious diseases that are caused by spirochetes of the genus *Leptospira*, are characterized by jaundice and fever, and are transmitted to humans by contact with the urine of infected animals.
- Choriomeningitis - Cerebral meningitis in which there is marked cellular infiltration of the meninges, often with a lymphocytic infiltration of the choroid plexuses.
- Ratbite fever - either of two febrile human diseases usually transmitted by the bite of a rat: a : a septicemia marked by irregular relapsing fever, rashes, muscular pain and arthritis, and great weakness and caused by a bacterium of the genus *Streptobacillus* b : a disease that is marked by sharp elevation of temperature, swelling of lymph glands, eruption, recurrent inflammation of the bite wound, and muscular pains in the part where the bite wound occurred and that is caused by a bacterium of the genus *Spirillum* called also *sodoku*.
- Tularemia - An infectious disease caused by the bacterium *Francisella tularensis* that chiefly affects rodents but can also be transmitted to humans through the bite of various insects or contact with infected animals. In humans, the disease is characterized by intermittent fever and swelling of the lymph nodes.
- Lyme disease - an acute inflammatory disease that is usually characterized initially by the skin lesion erythema migrans and by fatigue, fever, and chills and if left untreated may later manifest itself in cardiac and neurological disorders, joint pain, and arthritis and that is caused by a spirochete of the genus *Borrelia* transmitted by the bite of a tick especially of the genus *Ixodes*, *I. dammini* in the eastern and midwestern U.S., *I. pacificus* especially in some parts of the Pacific coastal states of the U.S., and *I. ricinus* in Europe called also *Lyme*, *Lyme borreliosis*
- Dermatitis - inflammation of the skin; skin becomes itchy and may develop blisters and is caused by the bites of mites from the mice.
- Tapeworm - Any of various ribbonlike, often very long flatworms of the class Cestoda, that lack an alimentary canal and are parasitic in the intestines of vertebrates, including humans.
- Favus - a contagious skin disease of humans and many domestic animals and fowls that is caused by a fungus called *honeycomb ringworm*.

## 0195

- **Black Plague - the epidemic form of bubonic plague**
- **Hantavirus - pulmonary syndrome, a type of virus carried by rodents causing severe respiratory infections in humans, and in some cases, hemorrhaging, kidney disease, and death. Hantavirus is another danger becoming more common. Recently there have been numerous outbreaks of Hantavirus in the United States carried and spread by the house mouse. The virus is contracted by humans through inhalation of dust in contaminated rodent areas, usually where droppings and contaminated food tend to collect. If you have or have had a mouse infestation, always wear a respirator when cleaning the area. Symptoms of Hantavirus are similar to the flu including fever of 101 +, chills, body ache, and troubled breathing. It can be fatal, so if suspected see your doctor IMMEDIATELY.**

All species of rodents carry and spread various diseases and can transmit diseases by way of their feces or urine, biting, infecting food they come in contact with and or contamination of food by urine and or feces, by fleas, by dying in a water supply, by way of your dog or cat. Often rodents are infested with fleas and or mites, which they spread among those with whom they live. **Rodents are responsible for causing injuries to humans who at times** become alarmed to such a degree that their reaction causes them to injure themselves in many different ways, the most common injury being fractures or broken bones.

### TELL TALE SIGNS THAT MICE ARE PRESENT

Obvious signs that mice are present are their droppings which appear in size about 1/8 to 1 inch in length, dark and pointed at both ends, gnawing, squeaking or running sounds, or damage to food or materials. Mice constantly leave feces and urinate in the areas they frequent. The odor of mice is quite distinct, especially urine. Fresh droppings are dark in color and soft. As they age, the droppings will become hard and brittle. Mice are predictable and will travel the same route over and over again as long as they are not alarmed, leaving their smudge mark along the walls, pipes and holes. The smudge mark is caused by a dirt and oil buildup in their fur. Footprints and or tail drags can sometimes be seen in dusty or dirty areas of frequent travel. Talc, flour, dust or tracking dust can be quite helpful in determining the presence and location of mice. Mice can and will gnaw their way through anything that is softer than their teeth, so gnaw marks are a sure sign of their uninvited presence. Older gnaw marks on wood are darker in color. Your dog or cat may get anxious or excited when mice are moving about. Sounds of mice gnawing, squeaking, or running through the walls or in the ceiling is occasionally the only sign that they are present. Mice favor nesting materials of shredded paper, insulation material and string. **Rodents consume and or contaminate large quantities of food every year.**

### HABITS & ADAPTIBILITY

The house mouse is extremely well adapted for living year round in homes, businesses and many other structures. You are most likely to notice mice during their fall migration indoors and during the winter months because they seek a place of warmth, with a food source and shelter. Once they establish themselves, they can be challenge to control. Even though most people consider mice less disgusting than the rat, mice are much more common and cause **EXTENSIVELY MORE** damage. Mice are prolific breeders, producing offspring in great abundance, having usually six to ten litters continuously throughout the year each having approximately five to ten babies per litter, with a new litter every forty five days or so. At eight weeks of age, the pups are capable of mating. It is not unusual for a female to be lactating her young and pregnant with a new litter. **The greatest economic loss caused by mice is not due to how much they eat, but what must be thrown out because of damage and or contamination. Food, clothing, furniture, books and many other household items are contaminated by their droppings and urine, or damaged by their gnawing. House mice can EASILY gnaw through electrical wiring causing fires and failure of refrigerators, freezers, washers, clothes dryers and many other appliances.** These disease transmitting rodents are nocturnal creatures and are seldom seen by the home or business owner.

Extremely curious, they explore their territory daily, paying particular attention to new items or physical changes in their surroundings. Mice show no aversion to new objects. In comparison to rats, mice wander only short distances from their nest, usually not more than a maximum of 25 feet. If food and shelter are adequate, they may only wander a few feet. To be effective in wiping out these rodents, traps must be placed in the areas where mouse activity is blatant. Mice prefer to travel adjacent to walls and other edges which is another critical point to remember when positioning traps. Mice enjoy cereal grains and seeds in their feeding, however, peanut butter is also a very delicious favorite, especially when applied properly to a suicide trap. When many food sources are available they can be sporadic eaters. Mice may make up to 30 visits at different food sites each night, munching as little as .15 gram of food at each site. Sites can change from night to night, but certain sites, where the mouse feels safest are their nightly hotspots. On the other hand, when food is limited, mice may visit a food source 200 or more times per night, only taking about 20 milligrams during each visit. An average mouse will consume about 3 to 4 grams or about 1/10th of an ounce of food each night.

0196

## FACTS ABOUT RODENTS

Rodents can survive almost anywhere where they can stay warm and food can be found. In the United States alone, rodents cause billions of dollars in damage annually. Did you know that the front incisor teeth of rodents never stop growing. Front teeth that are continuously growing is a trait shared by all rodents. It has been observed that mice without anything to gnaw on, reveals that the incisors can grow as much as five inches per year. The battle to rid dwellings of rodent infestations can certainly seem to be an uphill battle and if allowed to continue unaddressed, time ultimately favors the rodents. Rat and mice bones have been found in the caves where cavemen lived. Although water is vital to human health, such is not the case with all rodents. Desert dwelling kangaroo rats, gerbils and prairie dogs never drink water. A chemical process transforms part of their solid food into water. A mouse can and will jump down 12 feet without injury. They can even have a vertical jump as high as 12 inches. They can easily scale rough vertical surfaces and walk along thin ropes and wires. The odor of mice is quite distinct, however, an experienced pest control specialists can tell the difference between rat and mouse odors. A black light can be used to locate the presence of mice. Urine will have a fluorescent glow under the black light.

## SOME STATISTICS

Reproductive capabilities of mice, two months; rats, three months. Gestation period: approximately three weeks. Litter size: five to ten babies. Re-breeding time: Immediately. A female mouse can produce forty to sixty babies per year. There are species of native mice that occasionally invade houses, but the house mouse (*mus musculus*) are the prominent species that invade houses and businesses. They are excellent climbers and can run up most any roughened surface with the greatest of ease. Mice do not like to swim, nonetheless, they can swim, tread water and they apparently can hold their breath too. It is not uncommon to flush one down the toilet only to find that it reappears minutes later. Mice do not have bladders and they will relieve themselves at will anywhere. In six months a pair of mice can devour up to four pounds of food and produce 18,000 feces. They can endure extended periods of transport in closed containers, boxes, barrels or crates. Mice have lousy vision and cannot see clearly beyond about six inches. Mice can live as long as 18 months, but on average they live only about one year. Mice can enter a structure from an incredibly small hole, as small as 1/4 inch in diameter.

## RAT FACTS

Rats will memorize specific pathways and use the same routes repeatedly. Rats can get in your home through an opening about the size of a quarter. Rats also damage structures, chew wiring and can cause electrical fires. Rat bites are reported by the thousands each year in the U.S. alone and many bites also go unreported. Accidental poisonings of humans and pets frequently occurs due to poorly planned efforts to poison rats. Rats rely predominately on smell, taste, touch, and hearing as opposed to vision. They move around mainly in the dark using their long sensitive whiskers and the guard hairs on their body to guide them. Rats are very cautious, and if their food is in an exposed area where it cannot be quickly consumed, they will often carry or drag it to a safe haven. Rats have an excellent sense of taste that can enable them to detect certain compounds including rat poisons of extremely low concentrations. Rats are omnivorous, eating nearly any type of food, including dead and dying members of their own species.

## BE AGGRESSIVE! DON'T UNDERESTIMATE!

Underestimating the number of traps needed seems to be a frequent mistake by trappers. Remember, it is far better to have too many traps set than not enough to capture the entire population. Having less traps can allow the mice to continue reproducing and sooner or later an infestation could be the result. A temporary measure for holes around cables and telephone wires is to stuff them with steel wool prior to repairing them. When a rodent chews on steel wool it will cause internal bleeding and kill them, BUT, I only recommend this as a temporary measure because they can easily crawl in a hole inside your home business or other structure and die after ingesting the steel wool and it is there that they will begin to decompose which could result in unimaginable odors and attracting insects as well.

## GAIN CONTROL SWIFTLY

Choosing between traps and poison for rodent control will depend upon the severity of the problem, the location and the experience of the trapper. My sole preference is the basic SNAP TRAP/ RAT MOUSE TRAP and these traps are often preferred over poison baits for these reasons. SNAP TRAPS are often preferred for controlling mice since they eat less than rats and sometimes do not ingest enough poison to make it effective. Snap traps are highly recommended, extremely effective and should be placed in areas that are frequented by rodents. These areas can be identified by looking for gnaw marks, rodent tracks, droppings, urine stains, burrows or grease smudges along walls. It is best to bait rat traps and leave them not set until the rodents begin to feed. Rat traps should be anchored in some way. Rats can drag the trap away if only partially but non

0197

## Bubonic plague

From Wikipedia, the free encyclopedia

**Bubonic plague** is the best known manifestation of the bacterial disease plague, caused by the Gram-negative bacterium *Yersinia pestis* (formerly known as *Pasteurella pestis*). It belongs to the family Enterobacteriaceae. The term "bubonic plague" was often used synonymously for plague, but it does in fact refer specifically to an infection that enters through the skin and travels through the lymphatics, as is often seen in flea-borne infections. Bubonic plague kills about half of infected patients in 3–7 days without treatment, and may be the Black Death that swept through Europe in the 1340s, killing tens of millions.<sup>[1]</sup>

### Pathology and transmission

The bubonic plague is an infection of the lymphatic system, usually resulting from the bite of an infected flea, *Xenopsylla cheopis* (the rat flea). The fleas are often found on rodents, such as rats and mice, and seek out other prey when their rodent hosts die. The bacteria form aggregates in the gut of infected fleas and this results in the flea regurgitating ingested blood, which is now infected, into the bite site of a rodent or human host. Once established, bacteria rapidly spread to the lymph nodes and multiply. *Y. pestis* bacilli can resist phagocytosis and even reproduce inside phagocytes and kill them. As the disease progresses, the lymph nodes can haemorrhage and become swollen and necrotic. Bubonic plague can progress to lethal septicemic plague in some cases. The plague is also known to spread to the lungs and become the disease known as the pneumonic plague. This form of the disease is highly infectious as the bacteria can be transmitted in droplets emitted when coughing or sneezing.

### Symptoms

The most famous symptom of bubonic plague is painful, swollen lymph glands, called buboes. These are commonly found in the armpits, groin or neck. The bubonic plague was the first step of the ongoing plague. Two other forms of the plague, pneumonic and septicemic, resulted after a patient with the bubonic plague developed pneumonia or blood poisoning. The Pneumonic plague was the most infectious, as, unlike the bubonic or septicemic, it induced coughing, which allowed person-to-person

spread.

Other symptoms include spots on the skin that are red at first and then turn black, heavy breathing, continuous blood vomiting, aching limbs, coughing, and terrible pain. The pain is usually caused by the actual decaying, or decomposing, of the skin while the person is still alive.

## History

*Main articles: Plague of Justinian, Black Death, and Third Pandemic*

The deadly disease has claimed nearly 200 million lives (although there is some debate as to whether all of the plagues attributed to it are in fact the same disease). The first recorded epidemic ravaged the Byzantine Empire during the sixth century, and was named the Plague of Justinian after emperor Justinian I, who was infected but survived through extensive treatment.

The most infamous and devastating instance of the plague was the Black Death, which killed a quarter to half of the population of Europe. The Black Death is thought to have originated in the Gobi Desert. Carried by the fleas on rats, it spread along trade routes and reached the Crimea in 1346. In 1347 it spread to Constantinople and then Alexandria, killing thousands every day, and soon arrived in Western Europe. It is thought that the name Black Death comes from the fact that the tissue turns a distinctive black color during necrosis, or from the general gloominess surrounding the plague.

The next few centuries were marked by several local outbreaks of lesser severity. The Great Plague of London, 1665–1666, and the Great Plague of Vienna, 1679, were the last major outbreaks of the bubonic plague in Europe.

The plague resurfaced in the mid-19th century; like the Black Death, the Third Pandemic began in Central Asia. The disease killed millions in China and India and then spread worldwide. The outbreak continued into the early 20th century. In 1897, Pune in British India, was severely affected by the outbreak. The government responded to the plague with a committee system that used the military to perpetrate repression and tyranny as it tackled the pandemic. Nationalists publicly berated the government. On 22 June 1897, two young brahmins, the Chapekar brothers, shot and killed two British officers, the Committee chairman and his military escort. This act has been considered a landmark event in India's struggle for freedom as well as the worst violence against political authority seen in the world during the third plague pandemic.<sup>[2]</sup>

Directions for searchers, Pune plague of 1897

Plague was used during the Second Sino-Japanese War as a bacteriological weapon by the Imperial Japanese Army. These weapons were provided by Shirō Ishii's units and used in experiments on humans before being used on the field. For example, in 1940, the Imperial Japanese Army Air Service bombed Ningbo with fleas carrying the bubonic plague.<sup>[3]</sup> During the Khabarovsk War Crime Trials the accused, such as Major General Kiyashi Kawashima, testified that, in 1941, some 40 members of Unit 731 air-dropped plague-contaminated fleas on Changde. These operations caused epidemic plague outbreaks.<sup>[4]</sup>

## Treatment

In modern times, several classes of antibiotics are effective in treating bubonic plague. These include the aminoglycosides streptomycin and gentamicin, the tetracyclines tetracycline and doxycycline and the

Public Testimony  
DEIS/OEIS Guam and CNMI Military Relocation  
Relocating Marines from Okinawa,  
Visiting Aircraft Carrier Berthing, and  
Army Air and Missile Defense Task Force

Buenas. My name is Glenn Nelson, a proud son of Guam and resident of Yigo. Thank you for the opportunity to comment on the DEIS or Draft. It is important to note that in this process, we are here today to provide comments on the proposed Relocation of Marines from Okinawa, Visiting Aircraft Carrier Berthing, and Army Air and Missile Defense Task Force.

The scope of the Draft is without a doubt extensive.

I-144-001 | So extensive is the scope of the Draft that even the Honorable Major General Bice was quoted as saying "The size and complexity of this EIS is not like anything I've ever dealt with." My immediate thought was that there was a two year prep period, 90 day review, and only a 3 minute comment period. It is obvious to me that the Island and its people should be afforded more time to review this massive and complex document.

We are being told that the Draft is a result of public scoping meetings held about a year ago, and in cooperation with the Government of Guam. I'm sure it is well documented; however, not noticed in the Draft is that while our local officials worked alongside JGPO counterparts, they did so bound to a confidentiality agreement. This encourages a flawed process and I often ask myself why this was done. According to JGPO official, it was not designed for secrecy, but designed to keep the integrity of the process. By placing the representation of many in the hands of a select few bound by confidentiality, the true and genuine pulse on impacts to the community are not reflected in the Draft. In doing so, the integrity of this process was compromised.

Like recent local media reports covering these proceedings. Obvious to those who attended, most reports did not reflect the true sentiments of the participants in the process.

**I-144-001**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I am a homeowner situated within the 2000 acre footprint identified along the eastern coast of Guam for a proposed live firing range. This is the east coast alternative presented in the draft as one preferred alternative within an alternative.

I-144-002

Obvious is that the Draft caters to the alternatives carried forward absent input and the involvement of the Island's most valuable resource, its people. It seems that JGPO simply pressed with a process as they determined, in cooperation with and guided by the very level of representation that has failed me and my family. If this is any indication of the manner by which the Final EIS will be prepared, then JGPO will have avoided the primary purpose of the NEPA process.

This also raises the larger issue of what inaccuracies might exist in the document.

I-144-003

For example, most concerning to me is the possibility of using the powers of eminent domain and land condemnation to acquire those lands identified in the Draft as non-DOD lands of interests.

I have been told by many that condemnation or eminent domain will not be used to acquire either private or publicly held lands to accommodate buildup requirements. Many before me have expressed their concerns on this matter. Many more have chosen to recount events in our Islands recent history detailing the moral injustices inflicted upon our Island landowners during previous land grabs.

Condemnation and eminent domain are acts of force to acquire lands when friendly acquisition fails. At no cost will I forfeit my home and at no cost will many forfeit their interest in the lands that are publicly held. If condemnation and/or eminent domain is even remotely possible in the course of this process and a direct result of the alternatives identified in the Draft, then condemnation is within the scope of the DEIS.

I-144-004

The Draft fails to provide detailed information on residences in this area and the potential for impacts to this small residential community. The Draft should describe the measures to be taken to mitigate any potential impact to the residences and animal species in the vicinity.

**I-144-002**

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

**I-144-003**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value,

**I-144-005** The Draft fails to show that all effort was exhausted to prove that there is no other Federal Government property that can be used to adequately support the military requirement for firing ranges on DOD lands. In fact, it wasn't too long ago wherein a PACOM sponsored plan actually identified existing DOD facilities, including those easily dismissed in this Draft, as adequate to support live firing ranges.

**I-144-006** Existing facilities and improvements and their utility should be more accurately assessed for the Final EIS. There should also be clear discussion of the reasons for the elimination of alternatives which were not evaluated in detail.

**I-144-007** The Draft also fails to respect the fact that past actions by the DOD related to land condemnations for future military land use never came close matching their actual operational demands for the properties.

In connection to this, JGPO officials have been quoted in media reports stating that negotiations have taken place based on these notional plans. Known to all is that absolutely no extraordinary authority has been given to JGPO to do so and that such negotiations are beyond the scope of the Draft. Also, fair market value for all the lands that may be lost to condemnation or eminent domain is also beyond the scope of the Draft.

**I-144-008** Another issue important to me is that the Draft fails to fully address the impacts the proposed buildup will have on the Island's lone commercial seaport. Specifically, there must be some assurance that all non-military cargo operations both inbound and outbound will be done at the Port of Guam. To some, this may be a policy issue, but any impact to our Port associated with this proposed buildup and not identified in the Draft should actually be within the scope of the Draft.

**I-144-009** The Draft addresses multiple large scale projects and although JGPO had the discretion to lump simultaneous projects into one Draft EIS, they really did not have to.

Now there is a sense of urgency to expedite this process to meet the budgetary deadlines to submit the report on this military construction project by February 15 as well as the Future Years Defense Plan in conjunction with the Presidents

procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-144-004**

Thank you for your comment. Details regarding land acquisition were covered in the DEIS Land and Submerged Land Use Chapter. Further detailed information on the land affected will be provided in the Final Socioeconomic Impact Assessment Study (SIAS) and Final EIS document. The SIAS is presently in Appendix F, Volume 9 of the Draft EIS.

Additional parcel and land use information will be added to the discussion of existing conditions in the Final EIS, Volume 2, Chapter 8. The EIS identifies impacts to land use and land ownership within and adjacent to the proposed training range complex areas.

Mitigation for impacts outside-the-fence or beyond DoD property boundaries are considered outside of DoD control. Volume 7, Chapter 2 lists potential mitigation measures where federal government can provide assistance. There are ongoing federally funded studies that will identify encroachment issues and propose mitigation measures for encroachment.

**I-144-005**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-144-010

annual military construction appropriations request for FY '11. The pieces to this puzzle seem to be falling into place, and there appears to be no stopping this process.

As was likely the case in our history, too much time and effort was focused on how best to spend the \$15B before any thought was given to potential negative impacts to our Island. In fact engineers in Hawaii are already soliciting for applicants to a "multiple award construction contract," for various components identified in the Draft.

All this is happening at a pace much too quick for the Island to sustain any responsible and balanced outcomes.

I-144-011

Again, thank you for the opportunity to take part in this process. Be very mindful to all our issues, concerns and comments. They are not baseless appeals for any false sense of entitlement. More so, please do not easily dismiss them because any occurrence or impact caused by any action related to this proposed buildup, identified in the Draft or not, is within the scope of the EIS. We expect major legislation resulting from this process to also address all of our concerns.

Si Yu'os Ma'ase.

**I-144-006**

Thank you for your comment. The alternatives analysis methodology is presented in Section 2.1.2 of Volume 2. This section describes the process used for identifying alternatives. There are four components of the proposed action described in Chapter 2: Main Cantonment Area (Section 2.2), Training (Section 2.3), Airfield (Section 2.4), and Waterfront (Section 2.5). Specific descriptions of alternatives (both eliminated alternatives and those carried forward for analysis) are included in these respective sections of Chapter 2.

**I-144-007**

Thank you for your comment. Please see response to I-144-003.

**I-144-008**

Thank you for your comment. The impacts of the proposed relocation of Marines to Guam on the Port of Guam are addressed in the Draft EIS in Volume 2, Chapter 14, Sections 14.2.2.4 and 14.2.2.6. There would be additional vessels visiting Apra Harbor to transport equipment and supplies. In the peak year of activity (2015), there would be about 145 additional container ships. Because there has been a substantial decline in the number of commercial vessels visiting the Port of Guam from 1995 through 2008 (2,924 to 1,022), the addition of 145 container ships would not adversely impact operations of the Port of Guam.

**I-144-009**

Thank you for your comment. The proposed actions are complex, inter-related, multi-service proposals and are not discrete individual actions of the different military services. The National Environmental Policy Act specifically prohibits segmentation of a large proposal into smaller actions for environmental analysis. As this EIS shows, the proposed and related actions clearly are having effects on the same resource areas and must be considered together to determine the full potential

for environmental effects. Further, a comprehensive analysis helps define the best mitigation and management practices to lessen adverse effects.

**I-144-010**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-144-011**

Thank you for your comment.

COMMENT SHEET

I-145-001

I DON'T LIKE MILITARY BUILD UP. IT WILL CAUSE GUAM PUBLIC SCHOOL TO OVER POPULATED AND IN GUAM WE ARE ALREADY OVER POPULATED. WE CAN'T EVEN PROVIDE TO OUR LOCAL PEOPLE WHAT MORE IF THEY COME

I-145-002

I DON'T CARE WHAT BENEFITS THEY CAN BRING TO OUR ISLAND I AM CONTENT WITH WHAT WE HAVE IN GUAM. THEY SHOULD FIND ANOTHER LOCATION TO DESTROY. THE MILITARY SHOULD NOT BE SELFISH FOR TAKING GUAMS BEAUTIFUL LAND!!

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-145-001

Thank you for your comment. The Draft EIS identifies and discusses the impacts of the proposed action to Guam's public school system (in the socioeconomic chapters and the Socioeconomic Impact Assessment Study [SIAS] that is Appendix F, Volume 9 of the Draft EIS). Ways to implement the proposed relocation while minimizing adverse impacts are also discussed. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, including impacts on the public schooling system.

I-145-002

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. I-146-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-146-002

Thank you for your comment. Not all of the mission critical functions and requirements would fit on DoD land on Guam. Therefore, some non-DoD land is necessary for the proposed action. When considering non-DoD land for mission critical functions, the DoD attempted to meet planning requirements by use of excess, under-utilized, or otherwise available property held by other Military Departments or Federal

Agencies (see Section 2.1.2 of Volume 2). The alternatives differ in the amount of non-DoD land that would need to be acquired.

**I-146-003**

Thank you for your comment.

**I-146-004**

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

I-147-001

I'm worried about fights between Marines and young local boys & men because of the strong opposition to the buildup. Therefore, the Marines should be brought in slowly and gradually, and the military should find a way to bring the Marines in safely in a way that prevents fights and violence.

~~Mrs. Kasperbauer~~

I-147-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-149-001

Thank you for your comment; this information is already provided in the Draft EIS. Please see the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the DEIS, which provides detailed civilian employment data. Table 4.3-10 provides the Estimated Numbers of On-Island (Guam) Workers for Various Job Categories Excluding Direct On-Site Construction. Also, Table 4.3-3 shows Intermediate Operations-Related Calculations for Civilian Labor Force Demand (Civilian military workers on-base). It is expected that 25% of the civilian military jobs in Table 4.3-3 would be held by current Guam residents.

I-149-001

0147

"You can fool some people sometimes but not all the people all the time"  
Buenas yan hafn adai. My name is James Whippy, Graduate Student in the Micronesian Studies program of the Micronesian Area Research Center of the University of Guam and contract archaeologist.

I consider myself a Guahan boy even though I am in no way Chamoru. I am a proud indigenous Fijian islander who was born in Papua New Guinea and who has called Guahan my home since my family moved here when I was five in 1988. I am a product of the Guam Public School System.

**I-150-001** Guahan will never be the same following this build-up and history has shown that the US Military does what it wants. What is going on here is an attempt to sugar coat and down-play what is going to happen during this re-orientation of US Military forces in the Asia-Pacific region to Guahan. In doing this, they hope to achieve the least resistance possible during this relocation because once it has been completed, there is no going back. This militarization of Guahan is going to occur whether we like it or not, nothing we say here is going to totally prevent this from happening.

**I-150-002** As a contract archaeologist with military contracts I am literally in the trenches of this build-up. Will they have a cultural resource survey done for all lands taken from local landowners? I will answer that with another question. Did the US Military contract any archaeologists to survey Faallón de Medenilla in the CNMI before performing live fire and laser training today as I speak? Ah.

The legislation currently in place and enforced by the Historic Preservation Office allows developers to dig up and remove the bones of the Pre-Latte and Latte period Chamorros. Ask any of these militate around where the desecrated burial remains of the ancients go following archaeological excavations on construction sites. After that, if you really want to know the truth ask me after I get off stage.

**I-150-004** Because of the US military presence on island we cannot simply stage a coup d'etat like our brethren in my homeland of Fiji and change the system to our liking. To attempt so would be suicide. Our only non-violent option is to work within the confines of their western laws and regulations to achieve our goals. When this fails we shall see who is willing to stand beside me in a carabao and bull cart roadblock in front of military installations asking rhetorically for identification.

**I-150-003** Now I will speak on eminent domain invasion, regulatory taking, and subsequently, inverse condemnation.

As an unincorporated US territory we are second class citizens not fully covered under the complete protection of the US Constitution. That is a fact. However, we are granted the rights guaranteed by the Fifth Amendment. If you want to put it that way. The takings clause of the Fifth Amendment allows the US to take away any privately owned lands through eminent domain provided just compensation to the land owner. Who defines just compensation? Neither you nor I. Even if you do not accept this theft of property they are, under US law, legally allowed to do so.

Landowners, keep this in mind. Inverse condemnation proceedings may be initiated if, as a result of eminent domain regulatory taking and its subsequent regulations placed on surrounding lands, you are denied economically viable use of your land, even if it is a result of noise from overflying aircrafts. You must be compensated as well.

"What's the use of a good education with no direction like the right to vote with no one to vote for in an election."

### I-150-001

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

### I-150-002

Thank you for your comment. The DoD conducted archaeological surveys of over 5,000 acres of areas that were included in the project alternatives, including non-DoD lands where access was permitted. If these lands are developed as part of the project, then all unsurveyed areas would be surveyed prior to construction. We will continue to consult with the Guam SHPO and other stakeholder to avoid, minimize, and mitigate effects to historic properties.

### I-150-003

Thank you for your comment. The rights the residents of Guam are provided as a territory are issues that are not part of the proposed action, and as such, were not addressed in the DEIS and will not be addressed in the FEIS.

DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those

questions. Eminent domain requires reimbursement at fair market value.

Sometimes acquiring agencies do not require the acquisition of entire properties. This is referred to as a partial acquisition. If a partial acquisition creates an “uneconomic remnant,” the agency is required to offer to purchase those remnants. In addition, if partial acquisitions cause damages to remaining properties, offer amounts should include, as a separate line item, amounts offered as compensation to the damages to the remaining property.

**I-150-004**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-151-001

① The roads connecting Rte. 1 and the South Andersen housing area are used regularly by hundreds of people for jogging, bicycling and walking; there is no good alternative that provides freedom from traffic and dogs. It's important to preserve this area for the sake of people's health.

I-151-002

② Chalan Lujana, proposed as a haul road, is a narrow road with only one short section of sidewalk along a portion of Perez Acres. A 12-year girl has already died on this road as a result of a pedestrian-vehicle collision. A sidewalk needs to be extended all the way to route 1. There has been a suggestion to remove the stop sign by the Perez Acres entrance, but with the limited sight line for cars exiting Perez Acres that would be dangerous.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:

## I-151-001

Thank you for your comment. The Andersen South Marbo Annex, which includes the Andersen South housing area and all roads connecting it to Route 1, is active military land owned by the Department of Defense. As part of the proposed action, Andersen South would be the location of proposed training facilities such as vertical lift landing zones, live-fire training areas, non-fire maneuver training areas, non-firing ranges and others. Continued unauthorized use of roads by the civilian population after the buildup may not be possible due to the hazards and risks associated with training activities proposed at Andersen South.

## I-151-002

Thank you for your comments and suggestion for a sidewalk on Chalan Lujana between Perez Acres and Route 1 and your comment regarding traffic control. These will be considered in the final design of the Chalan Lujana project.

Please provide your comments below:

I-152-001

- Concern about the firing range

I-152-002

- Acquisition of chambers leads to creating limited access to cultural sites is not acceptable

I-152-003

Please  
- Take a hard look at existing lands of DoD, if necessary relocate existing buildings to accommodate a firing range

- I understand that 50 caliber bullets require 3000 AGL airspace restriction

Suggestions - Place Firing Range on floating platforms at 4km FAD buoy or create a buoy w/ platform for firing.

- No machine gun (50 cal firing)  
- All firing on Tinian lease  
(were Tinian ranges reviewed for 50 cal machine guns?) Does it say in EIS also that this was rejected.

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

## I-152-001

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam. First, planners examined all DoD lands on Guam. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (housing, Won Pat International Airport), the firing range could not be placed on DoD lands. Moving existing buildings would not be feasible because conflicts would still exist with airspace use and existing airfields or because of public safety concerns relating to the SDZs.

## I-152-002

Thank you for your comment. The issue of land acquisition is a complex and sensitive one, especially for Chamorro landowners. The DoD will negotiate with each owner of any property the DoD needs to acquire and will follow all applicable federal laws and regulations. Impacted landowners and tenants are integral to the negotiation process and should clearly express any impacts that would be felt as a result of land acquisition. While the government is authorized to acquire property through its powers of eminent domain (condemnation), it has been the consistent peacetime policy of the Department of the Navy to acquire real estate by direct purchase based on owner negotiations. Other options include long-term lease or easement agreements. Negotiations with landowners have not yet begun because it is too soon to know exactly how the land will be acquired. A final decision on whether or not land will need to be acquired will not be made until the Record of Decision. Though the decision has not yet been made, the DoD has engaged in informal discussions with government of Guam, the Guam Legislature, and any potentially affected private citizens to keep them informed.

DoD acknowledges that maintaining access to cultural and recreational sites is important. Although plans concerning access have

not been developed, DoD plans to provide access to these areas (such as Pagat and Marbo) should these properties be acquired. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-152-003**

Thank you for your comment. Marines stationed on Guam require annual qualification or requalification on weapons to maintain their combat readiness. Every Marine on Guam will require this type of training. This high volume can only be met with ranges located in close proximity to cantonment areas. It would be cost prohibitive to move every Marine to an off island location to meet these reoccurring training requirements. In addition floating platforms for the firing ranges would not meet DoD safety or environmental compliance requirements.

The build up's impact on the island's infrastructure will be tremendous. The congestion we experience now is incredible. The increase will have a dramatic affect. Will this improve or worsen. I think it will worsen. What solution do you propose to address this?

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by: February 17, 2010 Eastern Standard Time

I-156-001

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

I-157-001

*It will be very important to have a good transportation system for the islands. The transportation plan will significantly help the military efforts of Hawaii and Guam. Directly and indirectly. A long term partnership between DoD & DPW is in the best interest of this island community.*

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-157-001

Thank you for your comment. The 2030 Guam Transportation Plan outlines recommendations for an improved mass transit system on Guam. These recommendations included forming the Guam Mass Transit Authority and implementing high-capacity bus service on the island. In late 2009/early 2010, the Guam Regional Transit Authority (GRTA) was formed and will now be responsible for all public transit functions. The GRTA approved the Guam Transit Business Plan in January 2010, which includes purchasing new buses, constructing a bus maintenance facility, and modifying the bus schedule.

0156

Memorial and supplementation of  
testimony of Robert Klitzkie submitted  
on 11 Jan 2010 at Yigo

My testimony consisted of six points:

- I-158-001**
- 1) The Marine Corps buildup is a good thing for Guam and the nation.
  - 2) It would be in the best interest of all to work together to maximize the benefits of the buildup and minimize potential ill effects.
  - 3) As a Marine Corps veteran (a hitch in the 1950's) I have some feel for rifles (and ranges) and Marines and repudiate the "Marines are coming, lock up your wives and daughters" mindset.
  - 4) The Chalan Lujuna extension to Route 15 was imposed on the people of my neighborhood absent a DEIS or public hearing by our Mayor, Robert Lizama.
- I-158-002**
- 5) If Chalan Lujuna is to become a haul road it will have a significant impact on my neighborhood. However, if it must be done, so be it. (At least this time we were given notice and an opportunity to be heard before the decision was made.)
  - 6) The impact could be mitigated by:
    - a. Proper signage, speed limits, warning signs and traffic signals.
    - b. Maintaining the boundaries of Perez Acres.
    - c. A sidewalk from Perez Acres to Marine Corps Drive.
    - d. A noise barrier between Chalan Lujuna and Perez Acres.

Respectfully submitted,

  
Robert Klitzkie

I-159-004 \* JONES ACT WILL THIS BUILDUP OFFER OR BRING RELIEF FOR OUR LOCAL POLICY / GOVT OFFICIALS TO PAVE WAY IN PLANNING FOR OUR FUTURE, WITH NO INTERFERENCE FOR WASHINGTON D.C.? TOO LONG "O.S. WAY" HAS SPUN IN THE SHOTS. WE (LOCALS) NEED THIS BEC... \*\*\* Please Print Clearly\*\*\* NOW !!

Comments must be postmarked by: February 17, 2010 Eastern Standard Time

I-159-001

Thank you for your comment. The proposed actions are complex and have many components. In order to characterize the affected environment and potential impacts, sufficient detail needed to be included in the DEIS. The DEIS was broken down by Volumes for each major action, and the Executive Summary provides an overview of the proposed actions to facilitate readability. The DEIS was developed with the intent to balance readability with sufficient technical information.

I-159-002

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-159-003

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Phillippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and

off-island worker jobs would decrease to 3,935 jobs.

The FEIS identifies approximate numbers of civilian employees to be hired by the DoD. Specific hiring procedures, however, are not addressed in the EIS. DoD follows standard Federal hiring procedures to fill DoD civilian positions. Those can be reviewed at [www.opm.gov](http://www.opm.gov).

**I-159-004**

Thank you for your comment. Topics such as the political status also commonly referred to as “decolonization” and “self-determination” of Guam are important issues but are not part of the proposed action. DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island’s natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Public Testimony  
DEIS/OEIS Guam and CNMI Military Relocation  
Relocating Marines from Okinawa,  
Visiting Aircraft Carrier Berthing, and  
Army Air and Missile Defense Task Force

**I-160-001** Hafa Adai!! My name is Manuel P. Calvo and I'm from the village of Yigo. I stand stand before you today to express my concerns about the proposed condemnation of land.

I feel the military should maximize all land under their possession prior to any condemnation of land from the local people. It is apparently clear from the past several hearings that the people of Guam are against the use of more land for the military buildup. The people have shared many stories about how important it is to preserve their island, their culture and their homes.

I hope that the military hears our plea and revises the D-EIS . Our island has many of its own issues to deal with. The condemnation of any local land would create more issues proving this buildup is not for our island – it's for your bases, your forts and your camps!!

**I-160-001**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

### I-161-001

Thank you for your comment. Appendix K was updated to include a table of contents.

### I-161-002

Thank you for your comment. The 1991 Barrett report was added to the Final EIS in Volume 9 (References).

### I-161-003

Thank you for your comment. A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in a programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

I-163-001

As if the military presence here on Guafan isn't large enough, the United States Military wants to bring 8,000 marines here, where the negative impacts will far outweigh any merely positive impact. On an island so small, an influx of that many people become problematic. Traffic will become extensive as its facilities will grow. Marines are people who were troops to fill the men-facilities are not good for any lands. The DEIS don't mention the rapes and sexual crimes that the Okinawan Community suffered, the result of that is them spending millions to send their problems to Guafan. A lot of land is non assessable to local people, unused land that is pristine and valuable to indigenous people, and yet ~~the~~ the military needs more? They want lands w/ history ~~and~~ that needs to be protected. Cultural preservation is a must. Although the DEIS states alot of negative impacts to Guafan, what is even more of concern is what it does not mention. No mention of jobs going to locals. No mention of what might be dumped into our seas by an aircraft carrier ~~what?~~. No mention about pesticides and fertilizers that will be applied to rap land to benefit military activities. (Send the Marines home, and stop taking for an indigenous people who have already given so much.

## I-163-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

## I-163-002

Thank you for your comments. Current traffic congestion will continue even without the military buildup as a result of normal population growth. The haul road network would be designed in accordance with the latest American Association of State Highway and Transportation Officials (AASHTO) standards and guidelines, with particular focus on improving safety and reducing traffic congestion and will include improved signalization, signage and pavement striping. Pavement improvements to reduce potential for skidding would also add to road safety.

## I-163-003

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the

actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-163-004**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-163-005**

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

**I-163-006**

Thank you for your comment. An analysis of the potential impacts to nearshore waters associated with the construction and operation of the CVN wharf is presented in Volume 4, Sections 4.2.2 and 4.2.3.

**I-163-007**

Thank you for your comment. DoD is committed to substituting less hazardous/toxic substances for herbicides, pesticides, fertilizers, etc. where feasible. When this is not feasible, DoD limits the use of such hazardous substances to the greatest extent practical.

In addition, there are numerous best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of these or other hazardous/toxic substances. These actions designed to protect public health, welfare, and the environment include, but are not limited to:

- personnel training for the handling of herbicides, pesticides, fertilizers, and other hazardous substances.
- the use of various engineered solutions including secondary containment, leak detection and monitoring systems, the use of

inventory records and use records, etc.

- the use of spill prevention, control, and countermeasures (SPCC) plans and hazardous materials management plans (HMMPs) and hazardous waste management plans (HWMPs).
- waste minimization plans and the use of alternative, less toxic substances where feasible.
- proper transportation, handling, storage, use, and disposal hazardous substances protocol and directives.

These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of herbicides, pesticides, fertilizers, or other hazardous substances.

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 122

Received: 1/12/2010 12:23:05 AM

**I-164-001**

I have lived on Guam for over six years now, in Yigo, at Perez Acres. The road that runs in front of our property, Chalan Lajuna, is being considered as part of the haul road system. This would increase traffic and noise to our small residential community. Many of us would prefer that the Haul Road be routed through Andersen South.

**I-164-002**

We would also appreciate any consideration you could make to keep our community as it is, without additional noise from helicopters or the firing of weapons at Andersen south.  
Thank you for your consideration.

**I-164-001**

Thank you for your comments. Chalan Lujuna is proposed to be part of the haul road system to transport aggregate from the rock quarry located in Southern Guam through Route 15 to construction sites at NCTS Finegayan. As part of the proposed action, Andersen South would be the location of proposed training facilities such as vertical lift landing zones, live-fire training areas, non-fire maneuver training areas, non-firing ranges and others, and is, therefore, not under consideration for the haul road network.

**I-164-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 123

Received: 1/12/2010 12:39:48 AM

I-165-001

The operational and practical value of constructing a new wharf to accommodate a nuclear aircraft carrier is not remotely equivalent to the value of a healthy reef. According to the DEIS, the nuclear aircraft carrier will be on port for only 63 days a year, while the damage done to the coral reef and its inhabitants by dredging is PERMANENT. This is not an even exchange.

#### I-165-001

Thank you for your comment. The location of the new Navy wharf was chosen as the least environmentally damaging alternative in efforts to avoid the least amount of live coral in the area. The proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. The proposed dredged area consists mainly of a sand, rubble, and algae zone. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. Direct impacts of dredging to the shoal areas within Apra Harbor (Western Shoals, Middle Shoals, Jade Shoals, Big Blue Reef) will be avoided. The indirect impacts (from sedimentation) to these areas from in-water activities will also be avoided based on computer tide/current modeling performed within the project area (see Figure 11.2-3). The U.S. Army Corps of Engineers permits will likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects. To compensate for the loss in ecological service provided by coral reef ecosystem, upland reforestation (to improve nearshore water quality), artificial reefs (to provide increased fish habitat) or a combination of these and other compensatory mitigation alternatives will be considered by the Navy to comply with federal laws that protect coral resources.

Additionally, the DoD, as part of the "build-up" on Guam, will participate in the proposed upgrade to the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam.

#### GUAM PRIDE

I do not agree with the military buildup.  
The children get frightened when they hear about  
the crimes in the former places the military came from.  
GUAM will be flooded with cars.  
Rush hour may be everywhere!  
The government has to pay MORE for the hospitals,  
yet they still didn't build the JFK school.

Guam is our home.  
We basically know everyone.  
If you see someone in Kmart,  
there's an 80% possibility we'll  
see them in American Grocery.  
Honestly, I love that feeling.  
I truly do have Guam Pride.

If the military does come to Guam,  
the crime rate will, no doubt, increase.  
Guam will eventually change.  
this small island will have to go  
through the pollutions.

Do we want this to happen to our home?

I-166-001

I-166-002

I-166-003

I-166-004

### I-166-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-166-002**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

**I-166-003**

Thank you for your comment. Please see Section 4.4.1 of the Socioeconomic Impact Assessment Study (SIAS), which is Appendix F, Volume 9 of the DEIS for information on the expected impacts the proposed action would have on the government of Guam's (agencies) staffing requirements. The analysis in the SIAS includes both direct and indirect impacts including those who move to Guam for work related to the proposed action. Another study, funded by DoD's Office of Economic Adjustment (OEA) is underway, this is the Fiscal Impact Assessment that identifies the needs of the government of Guam and where the money to fund the needs could come from.

Incoming populations (such as the induced population during the operational period) would likely have dependents that would attend the Guam public school system. Based on income of military civilian workers and the goals set for the education of their children, many will send their children to private and/or parochial schools. The benefits to the community that the base is in, consists primarily of money that the new population provides to the local government from taxes, licenses, and fees. This money would go to the government's revenues. The executive and legislative branches of the government can then fund social, cultural, health, and other programs they feel are needed to benefit Guam.

If the services provided by Guam in the areas of utilities, infrastructures, social and health care, public schools, protective services, are inadequate (this is noted in the SIAS), the income (from the new population) will not be able to pay for all the required needs, especially any capital improvements. The Joint Guam Program Office (JGPO) has been working with and will continue to work with local and federal agencies to determine where funding can be supported. This has been and will continue to be an ongoing process and is exacerbated by the current worldwide economic crises. It is noted that, DoD funds are focused on the military and defense needs of the U.S., so JGPO may find that other funding alternatives must also be put into place to avoid and/or minimize impacts to the government of Guam. Where possible and appropriate, JGPO and/or DoD will support grants, loans, and other funds that focuses on improvements that are within the objectives of the sponsoring federal agency.

**I-166-004**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

It is most important that Guam is integrated with the new and emerging technologies being used by the military, so that Guam may use and apply them to local Guam issues. Further, and similar to how the race to the moon brought forth a wealth of technology and ideas, the modern-day construction of a new city/base will create, develop and utilize emerging technologies in infrastructure, transportation, energy systems and more which can help Guam immensely. Moreover, the integration of the school system -at all levels, to study, learn and expand these technologies can help foster generations of better educated and more productive Guamanians. This will help Guam exit the "buildup years" with a head of steam, leading to a better Guam. This is more important than giving 200 or 2,000 locals better paying jobs. It's more important than an extra 100 million in tax revenues. Sure better jobs are good for us now, and tax revenue will help, but it's the knowledge and momentum acquired that will propel future generations to a better life. Much like the byproducts of the space race.

I-168-002

Based upon my observations at the DEIS hearings, it seems there are different ideas of Guam's future in the world. Island leaders need to make clear what their goals for Guam's future are, and I believe should consider it on a global basis rather than just a village by village basis. Guam has been integrated with large players on the world stage, and needs to strongly consider how they want to use this position. It seems unlikely that the nostalgia of the past will aid Guam's future, and considering the lack of diversity in the economy of Guam, island leaders need to be much more forward thinking as it relates to where Guam is after the build up years.  
Senseramente.

#### I-168-001

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

#### I-168-002

Thank you for your comments.

#### I-170-001

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

Dearest WHO EVER READS THIS,

To whom ever this may concern! I believe that this will really make us THINK TWICE about really having "Build Up." Just because the "Build Up" is a good reason that there will be many job opportunities, it doesnt mean that it is a good thing! Well come to think about it, what is the real reason why the Japanese is kicking out the military out of Japan? Well like what things show at the news and words that has been passed around, there has been many Japanese's laws that have been broken and several crimes that have been committed and other brutality that they even dont count on the news, or it just wasn't shown at all.

First of all, the "Rape" and brutality there is really high. I know for a fact that this is one of the top reasons why they want them ou tof there. Another reason why,would be their disrespect. I could almost guarantee you all that this would cause us people from Guam to do the same back to them because I know that us Guamanians will never let others put us down. With this the crime rates will go up too.

Its great that they will be giving us opportunity but at least limit the amout of military that will be stationed on Guam. Guam is a small island and I dont think that we need more people than we already have. PLUS ANOTHER THING IS THAT THEY WILL BE OCCUPYING THESE NEW LAND AND DESTROYING THEM TO BUILD WHAT THEY NEED WHEN IT WILL ALL GO TO WAST. "AGAIN!" If you think about it "MAJORITY" of Guam is occupied by the military and what they occupy are the beautiful parts of Guam that they made into a usless place of land. Another thing is the housing areas! What have they done to those things? Well What do we know... IT WENT TO WAST ! You can just drive around and you will find what they clamed and not use it at all! At least give it to the people that will make use of it!

Im not saying to not let them come and settle here, im just saying that they should at least limit the military. And their plans for taking more land i think that they shouldnt even bother because it will just go to wast once more! And if they do take the lands that they want,then what will the meaning of Guam be? Will there be a reason for the tourism industry to grow? They might as well take the whole TUMON! There may be oppotunities comming but will it be promising and guaranteed?

I hope whome ever reads this WILL take this into consideration ! THANK YOU FOR YOUR TIME TO READ THIS.

"MY VOICE HAS BEEN HEARD!"

I-171-002

I-171-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-171-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DEIS states that there will be a 17% increase of cost of goods that is directly related to the Buildup. 17 percent is a significant increase and impact that is caused by the buildup What mitigation measures will DoD implement to offset these costs to residents?

I-173-001

#### I-173-001

Thank you for your comment. I am unaware of any statement in the DEIS that claims there will be a 17% increase in the cost of goods, directly related to the proposed action. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study (SIAS), for discussion of potential impacts on standard of living (Section 4.3.1.4). Section 4.3.1.4 of the SIAS does explain that the cost of goods and services will likely rise as a result of the proposed action; however, it is expected that the economic activity related to the proposed action will allow for higher paying jobs which would offset the price increases and allow the standard of living to be better than it would be without the proposed action.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 139

Received: 1/13/2010 10:29:46 AM

**I-174-001**

My main concern regarding the DEIS is the proposed firing range. Specifically the lack of alternatives presented in the D-EIS. Both Alt A & Alt B have the same impacts. The D-EIS cites the west coast and east-west combination as not feasible due to the anticipated public concerns.

**I-174-002**

Table 2.1-3 in Vol2, Ch 2 describes the Sasayan valley as mostly undeveloped with the exception of stone quarry operation and few residences. There are more than a "few residences" on the land indicated for alternative B. Many of these families have no interest in selling.

**I-174-003**

I say NO ACTION until an alternative for the proposed firing range is identified.

#### **I-174-001**

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. First, planners examined all DoD lands on Guam. Because of the size of the firing ranges and the need to include all safety zones as part of the acquired lands, or conflicts with existing land uses (housing, Won Pat International Airport), the firing range could not be placed on DoD lands. Other locations on non DoD lands were eliminated because of topography or settlements. The remaining alternatives, although located in proximity to each other do have different impacts in terms of cultural resources, socioeconomic resources, and biological resources.

#### **I-174-002**

Thank you for your comment. Recent land use research has identified 11 rural residences and three weekend residences. The Final EIS table will reflect the more recent research findings. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests, and pay fair market value. DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees. Specific areas being considered for acquisition are identified in the FEIS.

#### **I-174-003**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or

otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-175-001

My only comment would be Gambling, Drugs & Prostitution (GDP). There would be a total control on this small crowded island from now on. A crowded place is where these crooked group set-in because authorities couldn't cope with it. Big Brother's eyes needed. GDP and all illegals including no-paper immigrants are a cash dealing individuals and mostly doesn't have any bank account. I think authorities needs to magnify where the gambling, prostitution and other cash only businesses to be able to see who & what is inside.

If the military has to do so much permanent damage to Apra Harbor to accommodate an air craft carrier, then it obviously shows that it does not belong there. If something does not fit, then you shouldn't force it.

I-176-001

#### I-176-001

Thank you for your comment. The EIS acknowledges there would be impacts associated with the proposed construction of a new deep-draft wharf in Apra Harbor to accommodate a transient nuclear powered aircraft carrier. There are no other harbors in Guam, aside from Apra Harbor, capable of supporting Naval vessels for the proposed action as described in Chapter 2 of Volume 4 of the EIS. The DoD looked at several different potential wharf site locations, channel alignments, and turning basin options within Apra Harbor and used selection criteria to determine potential sites that would be both feasible and that would avoid/minimize environmental impacts to the extent practicable. Best management practices and potential mitigation measures have been identified (and are discussed in the EIS) to offset potential short term impacts and compensate for those unavoidable losses to coral.

Testing methods of Apra Harbor's sea floor is not adequate enough to ensure no toxic waste from prior military acts will be unearthed due to the dredging!

#### I-177-001

Thank you for your comment. Sediment samples within the proposed dredging areas were analyzed according to USEPA and USACE testing criteria. As discussed in the EIS (Chapters 2 and 4 of Volumes 2 and 4), preliminary sampling results indicate that all contaminant parameters that were tested with the exception of nickel were below the Effects Range Low (ER-L) level. Nickel is a substance that is naturally occurring in the environment. The study results suggest that the materials to be dredged would not require special handling and would be suitable for upland placement for beneficial reuse or ocean disposal (although the ocean disposal permitting process would require separate analysis and toxicity testing). Additional testing will occur during the permitting process and a dredged material management plan will be developed.

This document is too long and too difficult for me to read during the amount of time provided, we need the public commenting period extended. I would like to request at least a month to read each individual volume. We should be doing hearings in chunks, focusing on specific volumes rather than rushing people to cram a response to 11,000pages in 3 minutes. And our Governor has to be there. The people of Guam need more time to read before being able to engage in dialogue about the options presented and I would request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 commenting period required by 40 CFR § ...1506.10(c) is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam. If this is a sincere process, we need a longer period of time to sift through this information. February 17 is an unacceptable date to have the comment period end.

Received: 1/14/2010 4:50:24 AM

I would just like to request that the period for submitting a comment be extended. It would seem appropriate for the length of time to be extended given the length of the document.

#### **I-188-001**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**I-188-001**

As a resident of this island, I disagree to this military buildup. Im pretty sure I have reason of my own but here are some. First, this is a small island and imagine topping the population number by the thousands. How will we get to work on time without worrying about traffic, will things be done to prevent this. There will be more trouble out there compare to the problems we have now. We face stabbings, shooting, and all sorts of things what more if the Islanders meet up with these military personels its be a total chaos.

Its true we have a high rate of unemployed, but one the other hand will this help all of us out. Not all. Our roads are going to be more dangerous due to the fact that these guys will be driving like the way they drive wherever they came from. We have landfill issues and is this going to solve it, I dont think so itll make it worse to what we have now. Our sewege system cant keep up to this much of a population. Will they help out our kids going to school that are lacking books adn even lackign the school itself.

I-192-001  
I-192-002  
I-192-003

I-192-004

#### I-192-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

#### I-192-002

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

#### I-192-003

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the

actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-192-004**

Thank you for your comment. Unemployment as discussed in Volume 2, Section 16.2.2, it is projected that the impact of the military buildup would reduce the rate of unemployment on Guam (most recent published rate is 8.3%). It is anticipated that Guam's unemployment rate would ultimately be lowered by the construction and operational phases of the proposed action. As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will stabilize at a level above the current situation. The fluctuation in the number of jobs is expected to be greatest in the construction industry. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger

shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the Socioeconomic Impact Assessment Study (Appendix F of the DEIS), notes that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

Traffic danger as discussed in Volume 2, Section 18.2.2.7, there would potentially be more vehicles on the roadways resulting in more potential for accidents as a result of the increase in military personnel and their dependents. The Navy uses focus group sessions with personnel to strategize potential measures to reduce the number of liberty incidents, including traffic incidents. Several common factors contribute to liberty incidents including; young personnel, late night, impaired driving, and alcohol/drugs. Some of the measures that would be implemented to reduce traffic incidents during liberty include awareness training regarding the consequences of drugs and alcohol use; declare specific off-base bars/clubs off-limits; increase Shore Patrol activity; and provide free shuttle bus runs to/from town. Traffic accident data for the years 2001 through 2005 indicated that, despite the population increase over the 5-year period, the number of traffic accidents has decreased. In addition, the Guam Territorial Transportation Improvement Plan contains 14 island-wide traffic hazard elimination projects that include school zone signs, village road safety and warning signs, seashore protection, pavement markers, anti-skid surfacing, and guardrails.

Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The DEIS identifies a number of roadway

improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

The off-base roadway projects may be funded through the Defense Access Road (DAR) Program and annual allocations through the U.S. Department of Transportation (USDOT) Federal Highway Administration. The Defense Access Road Program provides the means for the Department of Defense (DoD) to pay a fair share for public highway improvements required as a result of a sudden or unusual defense-generated traffic impact or unique defense-related public highway requirement.

Volume 6, Chapter 1 has been updated to include a list of potential DAR projects. The DoD commits to seeking funding for these projects.

The Department of Defense, Guam Department of Public Works and Federal Highway Administration are continuing to work together to identify projects eligible for funding under the DAR program. The DoD will lead an interagency council which includes the USDOT to seek solutions to island-wide traffic issues

Landfill Volume 2, Section 19.2.4, indicates that the DoD would continue to use the Navy Sanitary Landfill at the Apra Harbor site for a short period from 2010, when Marine relocation begins, until July 2011, when the Layon Landfill is scheduled to open for disposal of municipal solid waste.

The new Layon Landfill is designed to accommodate municipal solid waste from all current and future DoD sources as well as civilian and commercial sources. Based on conservative waste generation rates, the new landfill will reach capacity in approximately 32 years. The DoD will be implementing diversion and recycling programs that will significantly

reduce solid waste generation and will help to extend the life of the landfill. Details of these programs have been added to Volume 6, Chapter 2.

The Navy is preparing a Recycling and Solid Waste Diversion Study for DoD Bases, Guam that has established a diversion goal of 50 percent, not including construction and demolition debris. The Study is considering the following alternatives: 1) DoD would construct two refuse transfer facilities, one in northern Guam and one in Southern Guam; 2) DoD would implement a source separation recycling program at all facilities; 3) DoD would construct recycling center(s); and 4) DoD would construct a materials resource recovery facility.

Additionally, the Navy is preparing a Construction and Demolition (C&D) Debris Reuse and Diversion Study for DOD Bases, Guam that addresses waste characterization, processing, recycling and disposal of construction debris. Information from this study will be used to update the FEIS.

The study is considering the following alternatives: 1) Contractors would continue to process all C&D debris, and DoD would construct a composting facility to process green waste and 2) DoD would construct a C&D debris central processing facility and a composting facility to process green waste.

Through project specific contractual requirements, DoD contractors would be required to process and divert 50% of C&D debris that is generated on each project. Another alternative would be for the DoD to construct a central processing facility that would be used to recover and reuse or recycle scrap metal, concrete (without lead-based paint), asphalt concrete, and untreated wood. Contractors would be required to haul C&D to this facility. Based on the C&D debris composition assumed in the study, the Navy will be able to achieve a C&D debris waste

diversion goal of greater than 50% by the end of fiscal year 2015. A site for the central processing facility is currently being evaluated but will most likely be located in northern Guam. Disposal of C&D debris that is not divertible or recyclable will be disposed at the Navy Hardfill at Apra Harbor. The study also evaluates the construction of a composting facility to handle green waste generated by land clearing activities required for new development.

Sewage Volume 6 discusses how additional wastewater flows will go to the North District Wastewater Treatment Plant (NDWWTP) from military and civilian sources, and how the DoD is working with the Guam Water Authority (GWA) to pay for repairs that are needed today at this plant that will result in improved sewage treatment and better water quality (repairs that are needed even absent the buildup). Until all of the repairs are made, DoD intends to provide temporary improvements at the plant to mitigate for increased flows during the initial phase of the buildup, which include adding chemical coagulants at the plant clarifier to improve solids removal. The EIS also discusses DoD and GWA plans to share costs to make upgrades to this plant; these upgrades were recently imposed by the EPA in November 2009. The EIS discusses the potential impacts that could result in the event that these upgrades are not completed.

Schools as discussed in Volume 2, Section 16.2.3, primary, secondary, and high-school education for civilian residents of Guam is provided through the Guam Public School System (GPSS), and various private schools. School-age children of active duty military and other federally-related populations on Guam are served by schools in the DoD Dependent Schools Pacific/Domestic Dependent Elementary and Secondary Schools (DDESS) Guam system. As a result of the civilian population increase associated with the proposed action, in order to maintain current student teacher ratios for public education services, the GPSS, Guam Community College, and University of Guam together

would need to hire a combined 490 teachers/faculty for the peak construction year in 2014, falling to a combined 135 after construction ends.

The impacts on the Guam public school system are discussed in subsection 4.4.2, page 4-42 of the SIAS. Table 4.4-4 in the SIAS provides the potential increase (maximal) of student population in the Guam Public School System from 2010 to 2020. Providing a brief summary, at the peak population year (2014), a total of 7,937 students could attend the public school system; by 2017, when the operational (long-term) conditions occur, the students generated could be 909. This is based on the direct and indirect (induced) populations resulting from the military relocation. The military dependents would be educated in the DoD school system and should not affect the public school system. Money generated through taxes from the increased population and federal payments to schools (based on student populations) should provide revenue to fund resources for the public schools.

I would request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 commenting period required by 40 CFR § ...1506.10(c) is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

#### I-193-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 173

Received: 1/14/2010 10:40:01 PM

I-202-001

The EIS has a very grim assessment of the dredging in Apa Harbor. Seems to me that protecting watersheds on the island in order to protect other reef systems as a form of mitigation falls drastically short. Marine biologists know that each reef has its own biodiversity that is specific to its micro environment which make it impossible to truly replicate. So in effect it is impossible to mitigate. But my real question lies in the assessment of Alternative #2 in EIS volume 4 chapter 11 with the statement:

- Seasonal disturbances to spawning coral reef species and scalloped hammerhead sharks, which would be mitigated.

"Which would be mitigated", where and how would this be specifically mitigated?

My other question comes from the statement that is repeated many times in Volume 4 under associated activities and resultant effects: stating that the dredging of the aircraft carrier channel will allow "increased vessel movement" resulting in "increased noise, resuspension of sediments, and increase potential pollutants."

As stated above the increased noise, sediments and pollutants will be damaging to the marine ecosystem. What will the true impact of these factors be over time? Will this harbor and its associated marine ecosystem ever be able to heal itself? Or do we just assume what's gone is gone? Because that is what this sounds like. The "increase of potential pollutants" statement sounds extremely vague and like a blank slate. Do we know what we are dealing with here in terms of "potential increase of pollutants"? We have had Navy bases and associated ports for many years now and there must be some scientific data that would tell us the true environmental impact the harbor and its ecosystem will bear.

Regards,  
Mr. Smith  
Tacoma, WA

## I-202-001

Thank you for your comment. The EIS impact analysis identified potential seasonal "disturbances" (i.e. less than significant impacts [short-term and localized]) within the commercial harbor from the proposed action to these species mentioned. Specific mitigation measures are not required for less than significant impacts, however the Navy will be implementing multiple mitigation measures and BMPs during in-water and land-based activities that will decrease potential impact to sea life and these species mentioned under the EFHA. Please see Volume 7 for Table of BMPs and Mitigation Measures. Additionally, the Navy as part of the "build-up" on Guam has also proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coastal water quality standards and benefit the sea life and people of Guam. In regards to increased vessel movement, with the implementation of the proposed action or alternatives, there will be increased in-water and land-based activity. This increase of activity may have increased "pollutant" affects on the environment in many forms (noise, water quality, etc.) and can be reduced or prevented by the proper implementation and management of Navy directives, mitigation measures, and permitted BMPs. Noise has been addressed, however potential water pollutants from possible mishaps are harder to evaluate. Considering the years Apra Harbor has been a commercial and naval port, and the high concentration of sea turtles and the quality of coral reef ecosystem in the harbor, one could say the current measures implemented by the users of the harbor are working.

### I-206-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-207-001

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

I-211-001

Hafa Adai! My name is Bernadita Benavente Penaflor Grajek. My family has a long history of serving in and in support of the US military. I am extremely proud of my brother who currently is active duty and lives in Hawaii. He just returned from Kuwait. In addition he has served several tours of duty in Iraq and Afghanistan. So you see I am not anti-military, I just have concerns about this build-up. My concerns are:

The DEIS Socioeconomic Impact Assessment Study indicates;  
That the increase in the islands population due to this proposed action will also mean an increase in access to services for the following agencies amongst others:  
Which will peak in 2014 -

Guam Memorial Hospital – 54, 639

Department of Public Health & Social Services – 28, 662

Department of MH & SA – 28, 662

Department of Integrated Services for Individuals with Disabilities – 67,880

Guam Department Of Youth Affairs – 10, 547

These are numbers of new people accessing services and does not include those who are currently receiving services.

Although we would never deny anyone services or supports, unlike stateside communities Guam has a cap on its Medicaid therefore does not have access to Medicaid Waivers and does not have SSI, these are funding sources that all U.S communities have access to provide services and supports.

I would like to know how and who will be funding the increase in service population. Unless these and other issues are addressed to the satisfaction of the Guam community I would not support the military build-up on Guam.

### I-211-001

Thank you for your comment. The Final EIS has been updated (Volume 2) to better address impacts on social services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 185

Received: 1/15/2010 7:52:24 AM

The EIS states it is likely that housing needs for civilians will not be met, therefore the high demand will cause housing prices to increase, overcrowding will occur, and homelessness could be more frequent. The suggested mitigation of the EIS is to assist the Government of Guam in seeking federal funding for more low-to-moderate income housing on Guam. These measures are not enough to counter the likely housing issues.

I-212-001

#### I-212-001

Thank you for your comment. The DEIS anticipates that military housing would be built within the main cantonment area. It is anticipated that the majority of Marine families would rent units in the military housing and generally would not compete with Guam residents for available housing units. After the construction period, housing and rental prices could decline because the construction labor force (not including the H2B who will live in dormitory type quarters) would leave Guam. Civilian military workers may vie for Guam housing; however, residential housing needed for these long-term workers would likely be about 3,200 units (maximal) by 2020 (SIAS, Table ES-3, page v).

Mitigation measures for significant adverse impacts were addressed in the DEIS and will continue to be addressed in the Final EIS. These mitigations include: avoidance, reduction of adverse impacts, and compensation for impacts.

You, the military, owns more than 25% of Guam and yet, you still want to acquire more land? As I drive around the island, I see condemned land that sits idle with little to nothing behind done on it. I am insulted that the U.S wants to use the Pagat Area as a shooting range. We have ancestral remains and artifacts in the area. The EIS states that "minimal impacts will me made". WE CAN'T HAVE MINIMAL IMPACTS! WE HAVE TO HAVE ZERO IMPACTS ON OUR CULTURE. We already have lost too much.

My solution: Too use land that you already have.

**I-214-001**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

Hafa Adai, I would like to submit three questions:

1. Will the public access to the Ritidian wildlife refuge be removed once the spy planes are stationed at the NorthWest field?
2. How can fisherman and boaters identify the 2-mile safety zone area off the proposed firing range? Is it considered criminal to enter the imaginary boundaries in the waters off the firing range?
3. Several think tanks have stated that the reported number of marines stationed in Okinawa is artificially inflated. What is the actual number of marines stationed in Okinawa, exactly how many are being transferred to Guam, and how many will remain in Okinawa?

thanks

I-216-001

I-216-002

I-216-003

#### I-216-001

Thank you for your comment. Stationing of aircraft at Northwest Field is not part of the proposed action.

#### I-216-002

Thank you for your comment. The safety danger zone would be marked with buoys and a large range flag that would be visible from the water would be flown during range use.

#### I-216-003

Thank you for your comment. It is not part of the EIS scope to provide information on the number of Marines currently stationed in Okinawa. The total number of Marines who would be relocated to Guam as part of the proposed action is: 8,552 Marines who would be stationed permanently and 2,000 Marines who would be on Guam rotationally (referred to as transient).

I am concerned about the impact on traffic as a result of the increase in population relative to the buildup. Our roads are inadequate to handle the buildup and Guam has an ineffective mass transit system.

I would recommend that funding be made available for a light rail system between Anderson Air Force Base and Naval Station Station that will stop along the way to allow people living in these areas to use the rail as a way to get around. The rail might loop thru NCS so that people living in that area will also have access.

I-221-001

#### I-221-001

Thank you for your comment.

There are currently no plans for lightrail on Guam as it is not a cost-effective solution to the projected increase in traffic on the island.

The 2030 Guam Transportation Plan outlines recommendations for an improved mass transit system on Guam. These recommendations included forming the Guam Mass Transit Authority and implementing high-capacity bus service on the island. In late 2009/early 2010, the Guam Regional Transit Authority (GRTA) was formed and will now be responsible for all public transit functions. The GRTA approved the Guam Transit Business Plan in January 2010, which includes purchasing new buses, constructing a bus maintenance facility, and modifying the bus schedule.

I-222-001

It is a sad situation when our beautiful, wild lands, with natural cave formations and access to the active, breathing ocean will become subject to live-fire training grounds. More and more we see parts of our island shuttered from local access. Is this necessary? Really... is it necessary? Why can't existing, flattened military base areas be used for this purpose? Why must more natural land be grazed over for the sake of American military purposes, without thought of consequence to the people who inhabit this land, this island, Guam? Can you find an alternative solution from closing down this land and developing it for the purpose of weapons training? More and more we lose access to our island, both high and low, without any sensitive thought to how this will affect the island, those who call it home, and the generations to come. If there's no stopping this gross military take-over, I appeal to you to cooperate with locals, and find a better way to co-exist on soil you are borrowing from others. Please be mindful of what you are doing.

I-222-002

Thank you.

**I-222-001**

**I-222-002**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 196

Received: 1/16/2010 5:14:35 AM

I-223-001

With regard to the proposed establishment of training area located at the South Andersen location (Pagat and vicinity). I propose that these facilities be relocated south of Northwest field, possibly in the Finegayan area or to the east, where the radar dome is located. The proposed USMC Cantonment and Family Housing at Finegayan can be then partially relocated to the vacant land east or northeast of the Andersen Airfield. The proposed MSA-1 storage can be further integrated near the current Andersen munitions storage facilities in order to consolidate space and provide a more efficient use of the land which is already in the possession of the US Government. In addition to this location, some of the family housing can additionally be placed near the current Apre Heights housing locations, or a similar small development in the interior off of Cross Island road.

#### I-223-001

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. Specific reasons why the firing range could not be located on the west coast at Finegayan include the following. There was concern that the amount and location of submerged land that would be encumbered by the SDZs generated by the ranges on the west coast would be an unacceptable impact on recreational activities and traditional fishing areas, which are prevalent on the west coast. Secondly, higher density civilian development in vicinity of ranges increases risk of encroachment.

I-224-001

In my experience with weighting ideas out, there is a list of pros and cons. If there is more pros than cons then I move forward with an idea, however if there are more cons than pros then an idea is squashed or revised and then weighed out again. In this case, we are looking at the military buildup as a solution to Guam's much needed problem areas. First off I would like to say that I do not hate or dislike in any way our military staff here on Island I think they are doing a wonderful job serving and protecting our country, now I have been following this story enough to know that there is in fact no real positive side to this so called solution for our Island, it is really being disguised with the \$\$\$\$\$ signs. I say do not move on with this buildup as it will cause a lot of chaos and dismay to our Island and let's look at other avenues to build and get Guam where it needs to be in the future.

#### I-224-001

I-225-001

"There are no reliable estimates for the amount of primary limestone vegetation remaining on Guam, the vegetation type that is the most threatened from historical losses and that is prime habitat for many of the threatened and endangered species.

The preferred alternatives would significantly impact terrestrial biological resources on Guam and Tinian during construction activities due primarily to the removal of habitat." V.7 pg.27

This statement disturbs me greatly. Threatened vegetation, that shelters threatened and endangered species is something we should protect rather than mitigate. Until they are protected I say No to the preferred alternatives and no to the build as a whole. "No Action!"

### I-225-001

Thank you for your comment. Although we do not know the exact amount of primary limestone forest on Guam overall, we do have very good recent information for Andersen AFB. At Andersen AFB a total of 1,722 acres of primary limestone forest has been mapped in detailed studies. We also know that much of the Haputo and Orote ecological reserves on the Apra Harbor Navy Base and much of the high altitude limestone forests within the Naval Magazine site are primary limestone forest. The preferred alternative would remove up to 28 acres of this primary limestone forest, a small fraction of the amount present on Guam. Overall, although impacts are significant, mitigation would be implemented that would reduce these impacts to less than significant. The mitigation being proposed is discussed in the various volumes, particularly Volume 2. Discussions are ongoing with the U.S. Fish and Wildlife Service that may modify or add to these mitigations.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 203

Received: 1/17/2010 12:07:34 AM

"The construction for the Navy's new aircraft carrier berthing in Outer Apra Harbor would result in significant direct impacts to marine biological resources. After all efforts to minimize and avoid the impacts of the aircraft carrier project, there remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. Sessile reef species, some crustacean management unit species (MUS) and site-attached reef fish. Pelagic egg/larval stages of bottomfish and pelagic MUS may also be affected. Marine flora, invertebrates and associated essential fish habitat (EFH) would experience longterm, localized and infrequent minor impacts from increased noise and resuspension of sediment during vessel movements, and the potential for increased discharges of pollutants into the water column."

I-227-001

This is unacceptable and can not be mitigated to a degree that would satisfy myself and many of the people of Guam. Our environment means a lot more to us than you must believe. I strongly believe the "no action" alternative should be chosen over the "preferred alternative." No Action!  
Environmental Build Up not Military Build Up!

#### I-227-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed construction of the Navy's new aircraft carrier berthing while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the Navy's proposed action reflect DoD policies to be good neighbors and responsible citizens on Guam.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 206

Received: 1/18/2010 3:50:35 AM

**I-230-001**

**I-230-002**

I don't think that we should have the military build up on guam because when they come to our island they will be put first before the people of guam. They would have to destroy our cultural land marks to make space for them to live also they will over populate our island. When they come to our island there will be less jobs for the people of guam because like i said they will be put first, so what i am saying is that i am not for the military build up and that it is a bad idea because the only culture that the people of guam will remember is the language of the chamorros.

**I-230-001**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO and other stakeholders to continue our efforts to avoid, minimize, and/or mitigate adverse effects to cultural resources.

**I-230-002**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Phillipines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As

indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 208

Received: 1/18/2010 9:16:42 PM

I-231-001

I am strongly against this military buildup. AS evident in this report, over and over again, this island is not ready for this influx in population.

#### I-231-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Buenas

I-232-001

The people of Guam will need more than the 90 days given to them to make comments on the EIS. The EIS has been bogged down with a lot of bueracratic BS. The People of Guam are not illiterate or dumb, and we are not stupid either. People with collage degrees can't even understand the EIS, what more the common people, to think that we can begin to understand what a 10,000 page ESI is trying to say.

In this day and time with all the technology, professional people working for the Federal Government, they could not have put together a more comprehensive ESI study, that cuts through all the politics. Give us the benefit of the doubt that we can understand and maybe accept a military build up here in Guam, given the laymans terms of an ESI. Show the people of Guam that the Federal Government is going to take the resposibility in making sure the infastructure needed for the build up is going to be taken care of and that the people of Guam will be treated fairly when it comes to land needed for the build up. Make sure that land owners will be given fair market value.It's things like that, will possibly make a smoother transition for the build up.

I-232-002

I-232-003

The Federal Government and it's appointed officials to over see this build up have not been open to Guam's elected officials or it's people. I know and understand why the build up is nessisary. I would be more incline to welcome this build up, if there was more transparency in the way the Federal Government and it's appointees plan to proceed with the build up.

I-232-004

so in closing I would like to see one of two things. Make the EIS more comprehensive and understandable to the common people or give the people of Guam more time to study the document.

Si Yuus Ma'assi

### I-232-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

### I-232-002

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

### I-232-003

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other

community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

**I-232-004**

Thank you for your comment. The proposed actions are complex and have many components. In order to characterize the affected environment and potential impacts, sufficient detail needed to be included in the Draft EIS. The Draft EIS was broken down by Volumes for each major action, and the Executive Summary provides an overview of the proposed actions to facilitate readability. The Draft EIS was developed with the intent to balance readability with sufficient technical information.

Comments must be postmarked by: February 17, 2010 Eastern Standard Time

I-233-001

Thank you for your comments. There are no proposed wharf or harbor improvements on Tinian planned under the proposed actions of this EIS.

I-233-002

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

I-233-003

Thank you for your comment. The DoD intention is to use Tinian training sites as a bivouac exercise and pack all solid waste out upon departure from Tinian for proper disposal in Guam. DoD does not plan to utilize the current Tinian "landfill" as it does not meet current environmental regulations.

I-233-004

Thank you for your comment. The Navy has re-evaluated the need to terminate all subleases in the leaseback area and will only propose to terminate subleases in the leaseback area that are within the range footprint and associated Surface Danger Zone of the proposed firing ranges.

As to possible sites for the relocation of any leases, such actions would be under the control of Commonwealth of the Northern Mariana Islands (CNMI) officials as they are responsible for non-federal land use decisions on Tinian. DoD will work with CNMI land use and natural resource officials to ensure that native forest habitat concerns for Endangered Species Act (ESA) listed species are taken into account in any relocation effort.

**I-233-005**

Thank you for your comment. It is assumed the commenter is referring to the brown tree snake. The brown tree snake is not known to be established on Tinian at this time. One of the projects that would be developed to compensate for impacts is a set of shipping and inspection procedures that will prevent the brown tree snake from being accidentally transported to other islands. These will be described in detail in a biosecurity plan that is currently under development by the Navy and various federal agencies.

Please provide your comments below:

I-234-001 How will the CNMI benefit from the Military buildup. When will it take effect?

I-234-002 What type of business can we cater to the Marines during their training on the Island of Tinian

I-234-002 How can local people be considered to access long beach for tourism, as you know that tourism is the bread and butter for the Island.

I-234-002 During the duration of the training what kind of chemical will the Marines use ~~at the type of training~~

I-234-003 I hope that some very historical places at Northfield should be restored for those fallen Marines during world war two. Maybe after the training Northfield should be ~~one~~ one of the State of the Art park and Museum for Tourist Attraction.

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-234-001

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-234-002

Thank you for your comment. There are various chemicals (e.g., hazardous materials/wastes) that may be used by the Marines. These may include:

- pesticides and herbicides;
- fuels, oils, and lubricants;
- solvents;
- cleaning agents; and
- corrosives.

However, when feasible, the DoD is committed to reducing or eliminating the use of various hazardous materials/wastes to the greatest extent possible and substituting them for less toxic substances. In addition there are numerous best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These actions designed to protect public health, welfare, and the environment include, but are not limited to:

- personnel training for the handling of hazardous substances.
- the use of various engineered solutions including secondary containment, leak detection and monitoring systems, the use of inventory records and use records, etc.
- the use of spill prevention, control, and countermeasures (SPCC) plans and hazardous materials management plans (HMMPs) and hazardous waste management plans (HWMPs).
- waste minimization plans and the use of alternative, less toxic substances where feasible.
- proper transportation, handling, storage, use, and disposal hazardous substances protocol and directives.

These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of herbicides, pesticides, fertilizers, or other hazardous substances.

**I-234-003**

Thank you for your comment. As part of the is EIS, a Cultural Landscape Report has been completed that outlines the history and significance of the North Field National Historic Landmark. It also proposed a long term treatment program for protecting the site. In addition, the Navy's Self-Guided Tour of Historic North Tinian will be updated and distributed to the public through the CNMI HPO office, NPS, and tourism related agencies.

Please provide your comments below:

I-235-001

① In the DEIS it states "Tinian surface water/ storm water other than lake Hagoi..." - (4.1.2.1) "there are no perennial or intermittent streams or lakes on Tinian" I have numerous concerns from this:  
① Since lake Hagoi is the only water source for the island ~~but~~ the DEIS does not address any measures to assure that it will be free from toxic contamination from the firing range activities. What will be done to assure its preservation?

I-235-002

② With the increased demands of increased population, what will be done to ensure that the ground water pumping rates will not exceed the recharge capacity of the aquifer... thereby resulting in increased chloride levels in the drinking water?

I-235-003

③ The DEIS reports that Tinian has police force of ~20 is only for its current population. Further the public safety services "would not be adequate to meet the needs of a major population influx." ~~How will the~~ current plans do not presently address the need for increased public safety personnel. How would this ~~be~~ issue be sufficiently addressed?

\*\*\* Please Print Clearly \*\*\*  
Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-235-001

Thank you for your comment. The potential ranges would be located at least 2.5 miles south of Lake Hagoi and down-gradient from the Lake. Runoff from the ranges would not flow towards Lake Hagoi. Expended rounds would be contained within the SDZ, which does not overlap Lake Hagoi. Thus, range training operations would have no impact on the water quality of Lake Hagoi.

I-235-002

Thank you for your comment. It is assumed the water concern portion of the comment pertains to Tinian.

The Tinian water utility (CUC) was contacted in March 2009. Water capacity versus the additional demand from Marine training was discussed and it was determined that the existing water system would have more than adequate capacity to provide water for the training to be conducted on Tinian. The training contingent would be 400 Marines maximum for one week per month. The production capacity of the water system per CUC is 2.2 million gallons per day and the current demand is about 1.3 million gallons per day. The Marines would require at the most about 40 gallons per day per person for a total additional demand of 0.016 million gallons per day, a 1.2% increase to total current demand. This would be a minor increase above current civilian demand.

I-235-003

Thank you for your comment. Volume 3, Chapter 16 discusses staffing requirements for public services necessary to cope with population increases associated with training activities on Tinian. A temporary population increase during the construction of the ranges would likely require the addition of one police officer. Tinian police anticipate few public safety impacts during range operations, if training units are accompanied by military police, as they historically have been. The Tinian fire department also expects no impact from training.

Thank you for comments. The issues that you raise about potential contamination are important and the DoD is actively engaged in many environmental clean up programs. However, the proposed actions that are the subject of the Guam and CNMI Military Relocation EIS are not directly related to these concerns and are, therefore, not included in this environmental document. For further discussion of potential contamination and hazardous waste management issues investigated in this EIS, please see Chapter 17 Hazardous Materials and Waste in Volumes 2, 3, 4, 5 and 6 (Chapter 18) for further discussion.

I want to comment on dredged material and the turning basin for the passage corridor for the aircraft carrier. My concern is where are they going to dump the excess dredged material? He said in the fast land of Guam or is it in the fishing area because everywhere on Guam and CNMI is fishing area. Would any of the dredged material may be dumped or disposed of anywhere in the CNMI? I am concerned about their dredged material toxicity. I have not read any of the results of the study of potential toxic material of the dredged material in the Apra Harbor area. Would the military give that information to Guam and CNMI? If toxic materials were found in the dredged material where are they going to dispose of the dredged material?

\*\*\* Please Print Clearly\*\*\*

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-238-001

Thank you for your comment. The DoD is considering several options for disposal of dredged material, including upland placement, ocean disposal, and beneficial uses, as discussed in the EIS (Chapter 2, Volume 4). Although the final decision on dredged material management will be made during the final design and permitting process, the Commonwealth of the Northern Mariana Islands (CNMI) has currently not been considered as a site due to the distance from Apra Harbor. Sediment samples within the proposed dredging areas were analyzed according to USEPA and USACE testing criteria. As discussed in the EIS (Chapters 2 and 4 of Volumes 2 and 4), preliminary sampling results indicate that all contaminant parameters that were tested with the exception of nickel were below the Effects Range Low (ER-L) level. Nickel is a substance that is naturally occurring in the environment. The study results suggest that the materials to be dredged would not require special handling and would be suitable for upland placement for beneficial reuse or ocean disposal (although the ocean disposal permitting process would require separate analysis and toxicity testing). Additional testing will occur during the permitting process and a dredged material management plan will be developed.

I-240-001

Will the Marines be using depleted uranium weapons during their training exercises here in Guam? If so, I am totally opposed to the move here to Guam. DU has a half-life of 4 billion years. What effects will it have once it contaminates our soils and particularly our northern limestone aquifer? Many military operations require the use of solvents that are highly carcinogenic, what guarantees do we have again to prevent these substances from entering our aquifer?

I-240-002

In the 1960's and 70's, race riots were frequent between white marines and local men. What will guarantee that these racial incidents will not occur? Will the stationed marines receive enough orientation and training to cope with the cultural sensitivities of the island?

I-240-003

Will training exercises prevent local fishermen from accessing their fishing grounds? If so, will the military compensate the fishermen from loss of income or from providing food for the table?

I-240-004

Who will provide for the strain placed on local infrastructure? The estimated population growth to 80,000 will severely tax our local resources. Who will pay for this exponential strain on our resources?

I-240-005

The indigenous population will be greatly disenfranchised by this growth. During the last 50 years, we have seen our demographic representation reduced by over 50%. Will the Chamorro people be given the right to self-determination without any interference from other cultural groups amassed here through the colonial processes and impositions of the metropolitan powers?

I-240-006

Will the U.S. military abandon Guam, as it did during World War II, in the event of another global conflagration?

I-240-007

What will happen to the island in the event of the eventual bankruptcy of the U.S. government?  
Will DOD guarantee that local labor, which includes U.S. citizens and residents, will receive preference over foreign laborers in order to reduce national unemployment rates?

**I-240-001**

Thank you for your comment. Marine training exercise plans for Guam do not call for the use of depleted uranium weapons during these exercises.

**I-240-002**

Thank you for your comment. The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. The DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-240-003**

Thank you for your comment. Some off shore areas would be restricted

to fishing boats while the firing range is operating. Impacts to subsistence, recreational, and commercial fishing is discussed in Volume 2, Chapter 16, Socioeconomics and General Services.

**I-240-004**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-240-005**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

While issues of Chamorro self-determination are important issues, they are not part of the proposed action. Implications of an increase in population due to the proposed action and possible impacts on Chamorro issues are covered in the Socioeconomic impact analysis sections.

**I-240-006**

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

**I-240-007**

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the SIAS. All jobs are to be posted on the Guam Department of Labor website ([http://guamdol.net/component/option,com\\_jobline/Itemid,99/](http://guamdol.net/component/option,com_jobline/Itemid,99/)) and are not supposed to be filled by foreign labor if there is a suitable resident worker.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 213

Received: 1/19/2010 4:59:29 AM

I-241-001

Volume 1 - Chapter 2 – Comment – 2.2.3.2 Amphibious Vehicle Laydown Area

The Amphibious Assault Vehicle (AAV) and the Landing Craft Air Cushion (LCAC) may have an adverse environmental impact. While the DEIS asserts the area the AAV's and LCAC's will traverse is a "manmade fill area, requires no demolition, and is undeveloped (vacant) with no land use constraints," a concern remains that these vehicles will harm marine life and coral. The noise generated from gas turbines that are similar to aircraft jet engines may cause noise pollution for miles. Depending on what types of top-secret insoluble cleaners the military uses during maintenance, washing down and maintaining AAV's and LCAC's may cause damage to the environment. Leaking or spilled oil, diesel, and general lubricants for the working parts of the AAV and LCAC may cause environmental problems. The heavy tracks from the LCAC may damage fauna and flora, roads, and generate noise in all directions. The final EIS should provide detailed documentation related to mitigation of the environment in relation to AAV's and LCAC's.

I-241-002

Volume 2 Chapter 4 – Impacts of Upland Placement Site Placement to Nearshore Waters

"The DEIS states, "During extended periods of intense rain, infiltration rates may be exceeded." The EIS must have a more comprehensive plan to mitigate the containment of dredged material deposited upland than merely that statement. "Extended periods of rain" encompass the entire rainy season on Guam. "Stormwater effluent constituents of concern identified were ammonia as nitrogen, copper, cyanide, mercury, total sulfide, and tributyltin" and radiation may flow downward to smother the reef.

I-241-003

Volume 2 Chapter 10 Page 103 – Last Paragraph

Pets brought into Guam by business people/families and military personnel/families should be spayed and neutered. The EIS should account for the fact Guam already has an epidemic feral pet problem. Therefore, spaying and neutering incoming pets will lessen their impact if their offspring are abandoned.

I-241-004

Volume 2 Chapter 16 Page 85 16.2.2.4 – Increase in Prostitution

The EIS must recommend that the Immigration and Naturalization Service is part of the process that prevents prostitutes from entering Guam disguised as entertainment workers. The EIS should recommend that DoD and the INS work together to enable the INS to deny entry or red flag establishments attempting to hire entertainment workers. Table 18.1-10 in chapter 18, page 7 of Volume 2 supports these assertions because it reports a likely rise in prostitution and STD's.

I-241-005

Volume 2 Chapter 18 Page 18 – 18.2.2.3 - Notifiable Diseases

The EIS should indicate whether military personnel are impacted negatively in their career for

## I-241-001

Thank you for your comment. As described in Volume 2, Section 2.5 the LCAC and AAV would be offloaded from amphibious ships at Victor Wharf on the west side of Inner Apra Harbor, and travel at low speed to the proposed laydown area on the east side of Inner Apra Harbor. Inner Apra Harbor is a no wake zone. This laydown site was selected because it is distant from other waterfront activities that might be impacted by noise. Noise impacts would be less than significant. No coral was identified in the marine surveys of the LCAC/AAV landing area (Volume 2, Chapter 11). No marine mammals were identified in Inner Apra Harbor. There are fish and invertebrates but no significant adverse impacts to the marine environment are anticipated to result from the LCAC/AAV operations. LCAC training currently occurs in Outer Apra Harbor. The LCACs would not travel over land beyond the LCAC/AAV laydown area. There is no near-term proposal for the AAVs to travel over land beyond the laydown area. They are propelled by tracked suspension when on land, not water jets. The tracks are rubber coated to minimize impacts to roads. Additional NEPA documentation would be required to address potential over land impacts if proposed in the future. Volume 2, Section 17.1 describes the regulations that must be followed by DoD when handling hazardous substances (e.g., hazardous materials/wastes) that may include: pesticides and herbicides; fuels, oils, and lubricants; solvents; cleaning agents; and corrosives. These laws are designed to be protective of human health, welfare, and the environment. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. Volume 2, Section 17.2 describes the Best Management Practices implemented by DoD, including Spill Prevention Control and Countermeasures Plans. The anticipated impact from solvents is less than significant.

**I-241-005**

contracting an STD. If such is the case, they may find treatment in a civilian clinic to circumvent punishment. This would impact medical availability to non-DoD residents.

**I-241-006**

Volume 2 Chapter 19 Page 16 – Land Acquisition – Tier 2

The EIS should indicate how they would compensate low-income families for lost fishing resources adjacent to land the military has condemned or purchased. Shoreline fishing and ocean harvesting is a large portion of low-income family sustenance, and, for some, their livelihood. Furthermore, residents unable to fish in condemned or purchased land areas will fish elsewhere thereby placing further strain in those areas.

**I-241-007**

Volume 4 Chapter 2 – Sediment Sampling/Testing - Core Samples

Analysis of sediment samples is crucial where dredging is proposed to detect for toxins and radiation. However, the sediment samples at Kilo Wharf should be analyzed in a planning ahead capacity that mitigates damages caused from aircraft carrier berthing, washing, general maintenance, fluid spillage, and docking activities that lead to flaking of antifouling and copper-based ablating paints. The EIS should account for all mitigation purposes at Kilo Wharf by using each bad experience in Okinawa and Pearl Harbor as a paradigm.

### **I-241-002**

Thank you for your comment. As described in Section 4.2.2.3 of the EIS, the NPDES permitting process for this potential situation would evaluate the nature of the effluent and identify necessary treatment measures to reduce contaminant concentrations below the Guam Water Quality Standards.

### **I-241-003**

Thank you for your comment, The importation of pets to Guam is the responsibility of the Guam Department of Agriculture.

### **I-241-004**

Thank you for your comment. Table 18.1-10 in Volume 2 addresses the number of cases of STDs on Guam and does not address prostitution. The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in health-related issues. It is noted that the EIS process provides information on environmental impacts (this includes the human environment); however, there is a limit to the specific details of the impacts because the information used is based on the continuation of existing trends and behaviors. While it is not an exact science, the EIS process along with the comments received provide information to the decision makers on the anticipated impacts of the proposed action.

### **I-241-005**

Thank you for your comment. Medical records are not a consideration in military personnel career decisions unless a physical limitation arises (e.g., pilot with burst ear drum). Military personnel are instructed to seek medical attention once signs of a condition arise to ensure treatment is started as soon as possible. Military personnel should not be seeking medical services at non-DoD clinics or hospitals.

**I-241-006**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-241-007**

Thank you for your comment. The sampling and testing of marine sediment that would be dredged as part of the proposed actions will be done in accordance with established USEPA and USACE protocols for dredging and dredged material disposal during the permit phase of the proposed projects. Preliminary sediment sampling and testing has been done in Inner and Outer Apra Harbor where dredging is proposed. Sample results are included in Volumes 2 and 4. There is no dredging proposed near Kilo Wharf as part of the proposed actions of the Guam and CNMI Military Relocation.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 214

Received: 1/19/2010 5:02:57 AM

I-242-001

Volume 1 - Chapter 2 - Comment - 2.1.3 Proposed Personnel Changes:

As construction is scheduled to start in 2010 and peak in 2014, congestion will be a major factor. A possible way to limit some of these problems is staggering of construction shifts so that 1/3 start at 4AM, 1/3 start at 5AM, and 1/3 start at 6AM in the busiest areas thereby mitigating some congestion. Additionally, construction workers could work graveyard shifts with high-powered lights in non-residential areas. To mitigate noise, construction must take place at reasonable hours when construction crews are in residential areas.

Considering that the population is going to increase by 79,178, DoD and GovGuam should organize a compulsory class to teach military personnel, their families, business people, and construction workers about the environmental impacts of a drastic population increase. DoD and GovGuam could create leaflets related to environmental awareness from refraining from littering to the problems of erosion on the reefs.

I-242-002

According to the DEIS, the population of 79,178 people will decrease to 33,608 people in 2014. It is presumptuous to assert that construction workers will be the only people leaving the island without a comprehensive case study from another country where the population quickly inflated then deflated. Theoretically, when the population decreases, Guam may enter into cyclical unemployment. When businesses are at their economic apex, cyclical unemployment is low because overall economic productivity is maximized.

When an economy declines, the business cycle plummets making cyclical unemployment rise. Consequently, Guam may face a recession starting in 2014. Adding to the problem is that the families of military personnel bring additional monies into their household by acquiring jobs off base; however, studies will most likely show they spend their money on base. The EIS should address these concerns.

I-242-003

Volume 2 - Chapter 17 - Navy Hazardous Waste Management

According to a Pesticide Information Profile done by Cornell University, "Tributyltin (TBT) is the active ingredient of many products that act as biocides against a broad range of organisms. It is primarily used as an antifoulant paint additive on ship and boat hulls, docks, fishnets, and buoys to discourage the growth of marine organisms such as barnacles, bacteria, tubeworms, mussels and algae."

In port, Navy ships produce hazardous waste due to TBT loss. Numerous scientific studies indicate that Pearl Harbor has experienced hazardous waste as a result of TBT. Can DoD provide the estimated amount of TBT loss expected for Apra Harbor after the military has destroyed the reef via dredging thereby allowing them to move through inner and outer Apra Harbor with additional ships?

I-242-004

Volume 2 Chapter 3 Page 23 3.1.4.1

If possible, construction crews should perform clearing and grading of soils and land during the dry

### I-242-001

Thank you for your comment. Included in the Final EIS Volume 7 summary lists are measures that restrict evening work in the community to reduce the potential noise impacts. Also there are mitigation proposals listed that would implement an education/informational program that provides military personnel and their dependents awareness training on cultural issues, protection of historic sites and preservation of the environment.

### I-242-002

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

### I-242-003

Thank you for your comment. The U.S. Navy applied tributyltin TBT-based paint to ships in the 1979-1988 time frames.

1. The use of TBT in the U.S. was banned in 1988.

2. The last Navy ship to use TBT had that coating removed in 1994. The Navy currently uses copper-based antifouling paints and is actively

season. If possible, construction should take place quickly that way bare ground is not left exposed for long periods. If possible mulch should be placed upon cleared and graded land to keep soil in place and slow erosion. The EIS needs to account for erosion with these mitigation measures because even during the dry season, Guam is prone to rainfall, tropical storms, and typhoons. Runoff from rain forces erosion into the ocean where it smothers the reefs; therefore, the EIS should comply with Guam EPA sediment regulations.

Volume 2 Chapter 4 – Paragraph Four – Dredged Material

“The DEIS states, “During extended periods of intense rain, infiltration rates may be exceeded.” The EIS must have a more comprehensive plan to mitigate the containment of dredged material deposited upland than that statement. “Extended periods of rain” encompass the entire rainy season on Guam. Dredged material potentially polluted with TBT’s and radiation may flow downward as stormwater. Dredged material may add to the current erosion problem and further smother reefs.

exploring less toxic alternative coatings.

HTIS BULLETIN Vol.9 No.3, May - June 1999. Tom McCarley, HTIS 2 Global Invasive Species Program me (GISP). 2008. Marine Biofouling: An Assessment of Risks and Management Initiative. Compiled by Lynn Jackson on behalf of the Global Invasive Species Program me and the UNEP Regional Seas Program me. 68 pp.

**I-242-004**

Thank you for your comment. DoD and regulatory agencies are equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from stormwater runoff. Construction of new facilities will use Low Impact Development (LID) principles to the extent practical. LID is a design philosophy that seeks to reduce the impact to the environment from new construction projects through the reduction of impervious surfaces. LIDs principles incorporate the design of facilities with the use of native vegetation, pervious (porous) surfaces to reduce storm water runoff and encourage recharge of groundwater, and water conservation. DoD is currently conducting a LID study that will identify specific types of alternative designs that can be incorporated into the construction of facilities associated with the buildup. DoD is also preparing a stormwater pollution prevention plan (SWPPP) and will apply for permits that regulate stormwater discharges during construction. The permit and plan is focused on reducing the amount of earth and soil that is exposed to stormwater during earth-disturbing activities (such as land clearing and grading), providing stabilization of soils during construction through the use of ground covers, and sediment ponds and traps/screens to reduce pollutants getting into storm runoff and from percolating into the ground. These plans also have specific

requirements for containment of potential pollutants at construction sites (such as storage areas for equipment fuel). Lastly, DoD is developing a construction and demolition (C&D) waste management plan in consort with the stormwater construction plan that calls for the use of mulch on exposed soils, mulch that will be generated during the clearing of trees and low growth during land clearing activities. Once construction is complete, a SWPPP will be developed to control stormwater runoff and infiltration from base operations. This is being done on a regional DoD Guam-wide scale, and has the involvement of Guam EPA.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 216

Received: 1/19/2010 11:13:15 AM

I would request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 commenting period required by 40 CFR § 1506.10(c) is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

I-243-001

#### I-243-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-244-001

I would like to request further extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c) is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam. I also do not believe that the extension to a 90 day commenting period will suffice. I believe that more time is needed to truly analyze the data within the DEIS and comment sufficiently.

Thank you.

#### I-244-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 219

Received: 1/19/2010 11:01:38 PM

I-245-001

I am a resident of Guam who supports the USMC move from Okinawa to Guam. I submit this comment because I have heard from most of my relatives and many fellow residents who feel that the expansion of DoD into areas outside their current property is disheartening.

With regards to planned training areas for live fire ranges and maneuver area, why isn't DoD or JGPO evaluating the areas already occupied by DoD on Guam? The initial argument from the community and GovGuam about safety buffer zones inhibiting private activity in the waters beyond the ranges was a "knee jerk" reaction that seems to be the primary reason for the proposal to develop the Sasayan valley into a training range. The eastern range still presents the same safety buffer zone issue. The live fire ranges on Naval Station-Guam, NCTS and AAFB are established and can be expanded and complimented with simulations to accommodate III MEF unit training. There is also significant maneuver area for non live fire training on North West Field, Anderson West (MSA), Tarague/Sirena, Naval Magazine Guam, and other lands currently occupied by DoD on Guam. It may require some "out of the box" thinking to develop and coordinate use of these areas for training ranges but it keeps DoD from expanding into GovGuam and/or private property. The latter is an alternative that is not acceptable considering all the property already held by DoD on Guam.

### I-245-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

COMMENT SHEET

Draft Environmental Impact Statement/Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation

Please Circle Meeting Location: University of Guam Southern High School  
Okkodo High School Yigo Tinian Salpan

The Department of the Navy (DoN) and the Joint Guam Program Office (JGPO) invites your comments on the Draft EIS/OEIS for the Guam and CNMI Military Relocation. Please provide your comments below. Comment forms, or your own letter, will be accepted at the public hearings, or may be mailed to: JGPO, c/o NAVFAC Pacific, 258 Makalapa Drive Suite 100, Pearl Harbor, HI 96880-3134, Attention: GMPO. You can also visit www.guambuildups.us to comment. Comments must be postmarked by February 17, 2010 Eastern Standard Time. Copies of the Draft EIS/OEIS are available for review at Nieves M. Flores Memorial Public Library, University of Guam Robert F. Kennedy Memorial Library, Joeten-Kiyu Public Library, Northern Marianas College, Olympia T. Borja Memorial Library, and the Tinian Public Library. A DoN sponsored reading room has also been set up at Agaña Shopping Center for Draft EIS/OEIS review.

Please provide your comments below:

I-246-001 Proposed use of off base roadways is not practical. The impact of the additional vehicles will adversely affect the quality of life of the civilian population and cause great resentment and disgruntlement towards the military and the Dept. of Defense. Presently, all alternative use plans fall far short of satisfactory. A new alternative needs to be pursued. I strongly urge you to find a more purposeful alternative. Additionally, I would like make the following suggestions, but by no means wish to interfere with your efforts to find a better alternative: A. That a roadway be extended, taking route 15 across route 4 and into the interior until it reaches route 17 and then into route 5 and route 2A until intersecting with route 1. B. An elevated six-lane limited access roadway be built above the existing route 1 from the main gate of the Naval Base to the main gate of Anderson AFB. This elevated structure can also carry the power, cable and phone lines, thus hardening the utilities against strong winds.

I-246-002 A probably sized portion of Orate point should be set aside for the construction of a 450MW coal or natural gas fired steam boiler power plant. CO2 sequestration can be done underwater. Fuel can be discharged at the existing ammunition wharf and conveyed up to the power plant. T&D lines can be run inside the above-proposed elevated roadway. This should belong to the Guam Power Authority with oversight by the Dept of the Navy.

I-246-003 A low earth orbit geosynchronous satellite should be launched and positioned over Guam. Satellite usage should be for both military and civilian entities. This would improve communications across the board.

Thanks for your attention,

Stephen Tyler

Comments must be postmarked by:  
February 17, 2010 Eastern Standard Time

I-246-001

Thank you for your comment. The new highway that you mention was a concept that would connect Navy facilities near Apra Harbor with Andersen Air Force Base. The proposal had been included in previous planning documents and was conceptually evaluated in the development of the 2030 Guam Transportation Plan. This route would primarily serve as a transportation corridor for only the military, would be very impactful to the environment and would be very costly to construct. In order to benefit Guam's roadway network and make better use of limited funds, DoD and the Federal Highway Administration (FHWA) plan to improve existing routes instead.

I-246-002

Thank you for your comment. GWA is considering future conversions of existing power generating facilities to liquified natural gas (LNG), which would lower emissions. However, a new 450 MW generating facility is much more than required by the DoD buildup. By law, DoD is limited to providing only that which is needed for support of their facilities and personnel. Your suggestion is very interesting, but beyond what can be considered within the scope of this EIS.

I-246-003

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

Dear Mr. Bice,

My name is Joseph Camacho, a descendent of Marcello Sgambelluri and I am currently an MBA student at Santa Clara University. I was home for the holidays and had the chance to attend the hearing on December 29, 2009.

I-247-002

I am writing to you in regards to the Sasayan property that the U.S. military is considering as a site for their training facilities. I would like to state first off that I do support the military build-up for the island of Guam. The presence of the U.S. government and military has helped the island of Guam to advance much faster than many of the other islands in the Pacific. However, I must point out that Guam is desperately in need for a more advanced infrastructure and other revenue sources to improve the overall economic situation. In spite of this, I strongly oppose the use of condemnation or eminent domain as a means for the military to acquire land (i.e. the Sasayan property) for the following reason:

I-247-001

Although the U.S. government is entitled to use eminent domain to acquire land, I believe that it is a breach of our rights as citizens of this country. As the 5<sup>th</sup> amendment to the U.S. constitution states, "no person shall be deprived of life, liberty or property, without due process of law; nor shall private property be taken for public use, without just compensation." If the military would like to use the land in Sasayan as their training grounds, then it would be just for them to provide appropriate compensation to the private-landowners that will be affected. However, this does bring a second point to my attention that is equally important as the use of condemnation to acquire the land, and that is the effect that the training will have on the property.

Sasayan is one of the few pristine locations on the island of Guam. We are living in a time when world governments (including the U.S. government) have been pushing people around the world to go green. Global warming is affecting our planet and yet this untainted property is being considered as a training facility to use destructive weapons, which will harm and pollute the environment. There are many lots of land on the island that can be used as a training facility rather than this beautiful plot of land.

Thank you so much for your allowing me the opportunity to voice my opinion.

Si Yu'os Ma'ase

Joseph Eduardo Camacho

### I-247-001

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

### I-247-002

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

Subj: Comments for the Draft Environmental Impact Statement/Overseas Environmental Impact Statement Guam and CNMI Military Relocation

This writer would like to express three areas of concern regarding the military buildup on Guam. The three areas that I would like to address are 1) jobs and the quality of those jobs 2) issues related to the importation of 15,000± alien contract workers and 3) prime contract opportunities for businesses in this geographic area.

**I-248-001** Jobs Affected by the Service Contract Act Wage Rates:

Approximately 11 years ago, the Department of Defense (DoD) through the A-76 process, outsourced the Navy's Base Operations Support Services (BOS). The BOS contract on Guam was and is believed to be, the largest BOS contract in the Navy's inventory and quite possibly one of the larger BOS contracts in the DoD inventory. In the late 90s when the Guam A-76 competition was conducted, there were no requirements to conduct an economic impact study as part of the A-76 process. As far as this writer knows, there has never been an economic impact study of the BOS contract and its effect on the Guam economy.

The General Accounting Office conducted a study in March 2001 titled "DOD COMPETITIVE SOURCING: Effects of A-76 Studies on Federal Employees' Employment, Pay, and Benefits Vary." (GAO 01-388) GAO stated in that report that most estimated cost reductions were related to reduced personnel costs. These reductions were primarily in two areas: 1) reduced wages and benefits and 2) the elimination of positions or reductions in force.

During the A-76 competition on Guam, it was widely reported that the average Service Contract Act (SCA) wage rate was approximately 50% less than that of the Federal Civil Service wage rate. If an employee was making \$20/hr as a Civil Service employee then that individual would, on average, only make \$10/hr under the SCA rates even though the size of the household and the financial obligations for that individual did change. As noted above, as far as this writer knows, no evaluation or study has been conducted to determine if there was an increase in demand for taxpayer funded public assistance programs such as food stamps as a result of these drastic pay cuts. Intuitively, it is presumed there was an increased demand however until an actual study has been conducted, it is just a presumption.

Whether or not there was an increase in demand for taxpayer funded public assistance programs, it is believed the pay cuts for the BOS workforce did have a significant effect on the Guam economy. It is easy to understand that someone making \$20/hr will have more disposable income than someone making only \$10/hr. That disposable income gets spent primarily in the Guam marketplace creating new business opportunities along with more employment and taxes for the "state" government. When 1,200 individuals have their income cut in half, that is the economic equivalent of laying off 600 people which is approximately 1% of the average Guam workforce. Information on the total number of workers employed by the incumbent BOS contractor and the very few long term sub

**I-248-001**

Thank you for your comment. Both employment and wages are expected to increase as a result of the proposed action. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study (SIAS), for discussion of potential impacts on standard of living (Section 4.3.1.4). Section 4.3.1.4 of the SIAS does explain that the cost of goods and services will likely rise as a result of the proposed action; however, it is expected that the economic activity related to the proposed action will allow for higher paying jobs which would offset the price increases and allow the standard of living to be better than it would be without the proposed action. Please see Section 4.3.4 for estimated of the proposed action's impact on economic growth.

I-248-002

contractors is not known however if the overall number of employees on the BOS contract is less than that when performed by the civil service workforce, then the overall effect on the Guam economy is quite significant.

This writer has attempted to get some measure of the changes in the SCA wage determinations between the time of the A-76 competition and today. While it is not one to one, trends can be identified by comparing the average and median wages from one wage determination to another. The wage determinations used are 94-2147, 94-2148 (02-97) and 2005-2148 (07-09). The 2009 average annual pay under the SCA wage rate is a mere \$27,500 not including the health and welfare fringe. When you review all of the occupations you see 68.50% of the occupations have average annual salaries of less than \$30,000, not including the health and welfare fringe. The median annual salary is even less, only \$26,811 not including the fringe.

When you compare the average hourly wage between the various wage determinations, you find the average increase in wages over the last twelve years is approximately 35 cents/hour/year. If you take out the three occupations with the greatest increases, the hourly increase goes down to 25 cents/hour/year. What jumps out at a reviewer, is some wage rates such as those in the automotive and transportation industries have not changed in twelve years. These two occupations have seen increases of approximately 1 cent/hour/year and 4 cent/hour/year respectively.

I-248-003

According to the Health and Human Services website, Guam does not have its own independent poverty rate threshold. Guam is given the option of using the poverty rate for the 48 contiguous states or use either Alaska or Hawaii's poverty rates. This writer is going to use the more conservative number of \$22,050 for a family of four which is the same as that of the 48 contiguous states even though the Guam consumer price index (CPI) is more aligned with that of Hawaii. The 2009 SCA wage determination has 4 occupations, or 25% of the total number of occupations reviewed, where the average annual wage is below the poverty line.

I-248-004

According to the Guam Department of Public Health and Social Services, the maximum income for a family of four to qualify for food stamps is \$33,000 without considering assets and other factors. The 2009 SCA wage determination has 13 occupations, or 81.25% of the total number of occupations reviewed, where the average annual wage is below the maximum income to remain eligible for food stamps.

The BOS contract is by far the largest employer using the SCA wage determinations and quite possibly the largest private sector employer on Guam. DoD has made it clear from day one of the A-76 process that it wants only one BOS contractor, that it intends to use one BOS contractor under Joint Region and have only one BOS contractor for the entire island covering the Navy, Air Force, Marine and Army facilities once the buildup is complete. As a result, very few Federal Civil Service positions will be created by the increased military presence which means the jobs created will be subject to the SCA wage determinations. It is therefore imperative that a comprehensive study of the wage rates be conducted to determine such things as 1) are the wage rates reasonable compared to the Guam CPI? 2) How do the Guam SCA wage rates compare to SCA wage rates in other jurisdictions with a similar CPI? 3) Have the wage increases been reasonable compared to the rise in CPI and/or inflation? 4) Has there been an increased demand for taxpayer funded public assistance programs by individuals employed under the SCA wage rates? 5) Has the BOS contractor been actively engaged in controlling cost by not providing pay raises (excluding those positions under a collective bargaining agreement which does have inflation increases factored into the agreement) and simply uses employee turnover to keep the SCA wage rate minimum pay as the maximum pay and 6) what effect has the reduced wages and benefits had on the Guam economy and tax base both short term and long term? These are just starting points and they are not meant to be all inclusive. If we do not know what the economic effect has been to date, then we cannot reasonably predict what the economic effect will be during and after the buildup.

**I-248-002**

Thank you for your comment. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Stud (SIAS), Table 3.3-4 for additional information on income by occupation. Furthermore, Tables 3.3-4 and 3.3-5 show how the change in incomes has been affected by inflation and that real (adjusted for inflation) income has declined, on Guam, by 30% from 2000 to 2008. Section 4.3.1.4 of the SIAS discusses how the project will affect the standard of living (incomes vs. price inflation) on Guam.

**I-248-003**

Thank you for your comment. Please see Appendix F of the EIS, Socioeconomic Impact Assessment Stud (SIAS), Table 3.3-4 for additional information on income by occupation. That table actually shows seven occupations, as of 2008, that pay wages below \$22,500. Wages below the poverty line, however, do not mean the family is in poverty. In some cases it does, but, many families have two income earners and if there are two income earners, each earner could make as little as \$11,250 and still, the family would be above the poverty line. Additional studies regarding calculations of the poverty rate would be beneficial but are not a part of the proposed action.

**I-248-004**

Thank you for your comment. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Stud (SIAS), Table 3.3-4 for additional information on income by occupation. That table actually shows 13 occupations, as of 2008, that pay wages below \$33,000. Wages below those qualifying for food stamps, however, do not mean the family qualifies for food stamps. In some cases it does, but, many families have two income earners and if there are two income earners, each earner could make as little as \$16,500 and still, the family would not qualify for food stamps. Additional studies regarding calculations of

Issues Related to the Importation of 15,000+ Alien Contract Workers:

DoD is aggressively pursuing the importation of foreign nationals under the H-2B Visa program to make up the preponderance of the workforce during the construction phase of the military buildup. DoD has made it clear at numerous outreach events that non U.S. workers are the preferred workforce since those workers are willing to work for far lower wages than U.S. workers. As an example, during the Summer of 2009 when the Abercrombie Amendment was being debated in the U.S. Congress, various high level DoD civilian personnel came to Guam and, in essence, said the buildup would not occur if Hawaii Wage Rates were to be paid on Guam. At best, this was a blatant attempt by high ranking DoD personnel to stir up the local business leaders and local politicians so that they would go to Washington, D.C. and tell Congress not to increase wages for Americans working on Guam and at worst, the statements are evidence of overt discrimination since construction workers in Hawaii are paid 3-5 times more than construction workers in Guam. Since Hawaii has a CPI similar to Guam, why then can DoD pay substantially higher wages to Americans working in Hawaii than they can to Americans working in Guam? It would be understandable if there were substantial differences in the cost of living between the two areas but other than the cost of housing, the cost of living is about equal.

There is an inherent bias in the current system against hiring U.S. workers, particularly those that reside on Guam. Many of the Guam construction workers and a fair number of construction company owners originally came to Guam under the H-2B Visa program. Under that program, a "skilled" H-2B worker is someone with two years experience in the trade (Per Greg Massey, Guam Dept. of Labor Workplace Enforcement Division) whereas a U.S. worker is expected to have a journeyman certificate which requires formal academic training and 8,000 work hours under an apprenticeship program. Now that the former H-2B workers have Permanent Resident Alien status and /or U.S. Citizenship, they are no longer considered "skilled" as they do not have journeyman certificates and are no longer the preferred workforce for construction projects on Guam. Even American workers that do have the journeyman certificate are not welcome as they feel that their education and experience is worth more than the paltry pay being doled out on Guam projects. The bottom line is why would I hire an American journeyman when I can hire a much cheaper alien contract worker?

The importation of large numbers of cheap foreign laborers will have a chilling effect on construction wages on Guam. The H-2B program is supposed to be based upon demand and only allowed if U.S. workers are not available. In November 2008 Site Supervisors were being recruited under the H-2B program with a bachelor's degree in engineering or architecture and one year experience as prerequisites for \$13.99/hr. In November 2009, those same positions were being recruited for 30 cents/hr less at \$13.69. It is hard to imagine any young man or woman graduating from a U.S. College or University that can pay their student loans and have any quality of life when the degree is worth less than \$28,500/yr, particularly in a place like Guam where the cost of living is very high. It should be remembered that DoD is expecting the buildup to have an inflationary effect on Guam which further erodes the quality of life for Americans working here. As it is, the average prevailing wage rate for construction workers on Guam is only \$29,579/yr which is substantially less than wages paid in most jurisdictions in the U.S. You would think that the U.S. Government would be looking to put Americans to work on Federal projects since it is estimated the unemployment rate in the construction industry may be as high as 20%. As it is now, this writer would argue that it is not a matter of U.S. workers not being available to fill jobs; it's a matter of U.S. workers not being able to survive and provide for their families on the wages being paid.

As noted above under the SCA discussion, the wages being paid for construction workers on Guam are very low and most likely there are a number of these workers and/or their families on some sort of taxpayer funded public assistance program. Just like under the SCA discussion, by depressing

food stamp qualification levels would be beneficial but are not a part of the proposed action.

**I-248-005**

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the SIAS. All jobs are to be posted on the Guam Department of Labor website ([http://guamdol.net/component/option,com\\_jobline/Itemid,99/](http://guamdol.net/component/option,com_jobline/Itemid,99/)) and are not supposed to be filled by foreign labor if there is a suitable resident worker.

Relating to cost of living and the proposed military buildup, it is noted that the history of inflation and recession of Guam's economy from the 1970s to present was provided on page 3-47 of the SIAS. In subsection 4.3.1.4 (beginning page 4-10) of the SIAS, the subject of impact on the standard of living is addressed, stating: "Standard of living is a measure of purchasing power. If the standard of living increases for a person it means they can purchase more goods and services. If the standard of living declines for that person, he or she can purchase fewer goods and services. Changes in a person's standard of living are determined by their income and the prices of the goods and services they tend to purchase. A person's standard of living will increase if their income rises faster than the prices of goods and services they tend to purchase. A person's standard of living will decline if the prices of goods and services they tend to purchase rise faster than the person's income. In both the construction and operational components, the average wage of workers would increase as a function of greater demand for labor. However, the price of goods and services purchased by individuals would rise as well. It cannot be definitively predicted whether wages or the price of goods

construction wages, the effect on the Guam economy is most likely negative. Further, the H-2B workers will not spend their money in the Guam economy as they will ship the preponderance of their salaries off island to foreign countries so Guam will get very little multiplier effect from these wages. This writer is not aware of any economic impact study that has looked at the construction wage rates on Guam, assessed the reasonableness of those wages and measured the overall impact of low wages on the economy.

As it stands now, about the only entity that will benefit from large numbers of alien contract workers being imported for the buildup is DoD. The Guam economy certainly will have little to no benefit and if it is as suspected, large numbers of Guam construction workers or their families are on some taxpayer funded public assistance program, the importation of these workers is not beneficial to the rest of the U.S. Government either. Why then, if only DoD will benefit from these low construction wages, is it expected that the Guam taxpayers pay to regulate this large influx of alien contract workers?

It is a good thing that DoD is requiring the prime contractors and by extension the sub contractors to provide insight into how they will handle their H-2B workforce but that is not enough. Historically DoD has taken the "privity of contract" position with DOD only responsible to the prime contractor. In the case of the buildup, the prime contractors for the most part are not the firms that will bring in workers under the H-2B program. The further a sub contractor is from the prime contractor, the less money available to fund company profits which encourages sub contractors to make their profits on the backs of the alien contract workers. A number of labor complaints were filed by H-2B workers in 2009 and in one case, by American workers that were not paid for several months' work on a DoD housing project. DoD's position? Its not our problem, we only deal with the prime contractor. Since labor disputes are already happening with little to no labor enforcement by either the Guam Dept. of Labor or the U.S. Dept. of Labor, what will it look like once the buildup is in full swing? As noted, only DoD will benefit from the low wages and the importation of large numbers of alien contract workers so this writer argues it should be the responsibility of DoD to enforce the contract terms including enforcing the minimum housing standards and enforcing pay and benefits paid to the alien contract workers.

#### **Prime Contract Opportunities:**

DoD has made it clear as far back as the A-76 competition that DoD only wants one contractor to perform 100% of the work on Guam with that work to be performed by the BOS contractor. The mission of DoD on Guam has expanded significantly with all new work being sole sourced directly to the BOS contractor. Now under Joint Region, as prime contracts expire at Andersen AFB, the work is being folded into the BOS contract, again on a sole source basis. When you review the bid of the BOS contractor when the contract was awarded in 2005, the value of the contract through 2010 was approximately \$220,857,336. To show the dramatic increase in work, the award year 2010 was recently announced with the actual value of the contract through 2010 now at \$381,967,362 or a 73% increase in contract value in less than 5 years! If past history is any indication, it is likely the 2010 award will increase as new work continues to be sole sourced to the BOS contractor.

DoD's de facto policy, if not its actual policy, is the elimination of as many prime contract opportunities as possible so that fewer and fewer American companies are large enough to compete for work. Even though all American companies are taxed, DoD's policies are directing more and more of those tax dollars to fewer and fewer companies.

In micro economies like Guam, DoD's policies are eliminating Guam firms from the prime contract market place as there simply isn't enough work and money turning over on Guam to allow a Guam firm to grow to a point where they can be competitive on these larger projects. Understand

and services would increase at a faster pace. If wages earned by a particular household rise more quickly than the price of goods and services, then the standard of living would increase. If the price of goods and services rises more quickly than wages, the standard of living would decrease. For households on fixed incomes, the result would be reduced purchasing power. Those with the ability to quickly renegotiate their wages will have a better chance at maintaining or increasing their standard of living." On page 4-11 of the SIAS, the discussion continues and discusses the income of military related construction and operational jobs that will, on the average, be higher than the present average wages on Guam. It concludes: "In terms of cost of living, from 2000 to 2008 Guam workers have seen their standard of living decline by 30% and there is no reason to expect the military buildup to reverse that trend – Guam workers will likely to continue to see the cost of goods and services rise faster than their incomes. While the proposed action may not represent a reversal of this trend, it will slow the rate of decline in the standard of living that has been prevalent since 2000."

#### **I-248-006**

Thank you for your comment. For discussion of H-2B workforce issues, please see Appendix F of the DEIS, Socioeconomic Impacts Assessment Study (SIAS), Section 4.3.2.4. For discussion of potential impacts on standard of living please see Section 4.3.1.4 of the SIAS. Guam laws regulate some wages in the Guam economy; the scope of the DEIS does not include critique of the laws of Guam, nor a critique of DoD contracting policies.

I-248-007

clearly, I am not arguing for a local preference. What I am arguing for are policies where the Federal Government, in this case DoD, provides contract opportunities at levels where there is a reasonable expectation that a Guam firm can compete and win a contract. If Guam firms compete and are not the successful offeror then so be it. I would argue having contracts so large that only very large off island firms are likely to be successful offerors is not a reasonable policy and is not beneficial to either the Guam or the U.S. economies.

It is somewhat disconcerting that not only is DoD eliminating prime contract opportunities, DoD is working very hard to provide increased opportunities for foreign companies so that these foreign companies can perform work on U.S. military bases within the U.S. borders, namely on Guam. Even though all but \$2.8 billion of the buildup money will ultimately come from the American taxpayer, DoD is expending a great deal of effort to create Special Purpose Entities to benefit foreign firms which introduces even more competition for American firms even though the work is being performed within the borders of the United States. Further, DoD has demonstrated its willingness to sign contracts with foreign firms that have lower ethical standards than what is required of American firms. (See U.S. Federal Court of Claims Case No. 08-261C) Why would DoD have policies that allow foreign firms with questionable business ethics perform on contracts paid for by the American taxpayers within the borders of the United States when American companies with similar business ethics would have been ineligible for the award?

DoD personnel justify the elimination of prime contract opportunities by saying "they are getting sub contracts." There are several problems with that argument. 1) When did it become official U.S. Government and/or DoD policy to only do business with the top 2 or 3 percent of companies nationwide? 2) There are no protections for sub contractors in the Federal Acquisition Regulations (FAR) 3) DoD takes the priority of contract position when disputes arise between prime and sub contractors and probably the most important point is 4) entrepreneurs do not open businesses to become sub contractors. Entrepreneurs open businesses so they can become prime contractors and control their own destiny.

The incumbent BOS contractor is providing very few long term sustainable sub contracts preferring to meet the sub contracting goals primarily through the purchase of supplies and the use of sub contractors on an as needed basis. As a result, when the BOS contract is re-let, Guam companies, along with most other companies, will not be able to demonstrate past performance working on a BOS contract and thus are not likely to be given sustainable long term sub contracts by the next BOS contractor. Prior to the outsourcing under the A-76 competition, few opportunities existed for firms to work within the annexes as the work was performed by the civil service workforce. Now ten years later, few opportunities exist for firms to work within the annexes as the BOS contractor self performs most of the work. What then is the overall economic benefit to Guam, DoD and the country as a whole as a result of outsourcing this particular BOS contract? After the buildup is complete what is the economic benefit when you consider DoD's stated intent to continue to expand the BOS contract until 100% of the work is performed by the BOS contractor? As noted before, no economic impact studies of the BOS contract, the effect on the economy of reducing wages under the SCA wage determinations and the economic impact resulting from the importation of large numbers of alien contract workers to depress wages for American workers, has been undertaken.

**Conclusions:**

If DoD is allowed to continue along DoD's stated path, it is very likely the average citizen of Guam will believe their quality of life went down as a result of the buildup and the increased military presence. I'll let others discuss the issues related to limited resources, noise and increased demand for

I-248-007

Thank you for your comment. For discussion of H-2B workforce issues, please see Appendix F of the DEIS, Socioeconomic Impacts Assessment Study (SIAS), Section 4.3.2.4. For discussion of potential impacts on standard of living please see Section 4.3.1.4 of the SIAS. Guam laws regulate some wages in the Guam economy; the scope of the DEIS does not include critique of the laws of Guam, nor a critique of DoD contracting policies.

I-248-008

Guam taxpayer funded infrastructure to support the increased military presence but I will argue for consideration of the economic effects on the average Guam citizen. I would argue that a good hard look at DoD's policies should be undertaken, as it relates to the buildup, the current BOS contract and beyond.

It would be a shame if DoD, the Guam Business Community and the Guam and National Political Communities do not undertake the necessary economic impact studies to ascertain or reasonably predict what will happen in the Guam economy as a result of this buildup and increased military presence. It would be a further shame if ten years from now the young men and women in uniform assigned to Guam are hated by the local community. If we are not smart, we will end up with the "haves" being the active duty military and the "have nots" being the average American residing on Guam. The economic conditions discussed here, more than anything else, will be the seeds that are sown today that will reap bitter fruit in the future unless we attempt to balance the needs of DoD with the needs of the American people.

I-248-009

**Recommendations:**

Conduct a series of economic impact studies focusing on:

- 1) The effects of the BOS contract on the Guam economy and tax base to date
  - a. This could be broadened to include benefits to DoD and the U.S. economy as a whole
  - b. This study or a separate study should endeavor to determine what the BOS contract will be like once the buildup is complete and the military presence has increased.
- 2) The effects of importing large numbers of alien contract workers to depress wages for American citizens
  - a. Again, on Guam and the U.S. as a whole
- 3) The effects on U.S. companies by eliminating prime contract opportunities
  - a. The importation of large numbers of foreign companies to compete for the few remaining prime contracts against U.S. companies within the borders of the United States should be reviewed as well.
- 4) There may be other studies that should be conducted in addition to those above.

Thank you for the opportunity to discuss my concerns regarding the military buildup on Guam. If DoD does not consider the economic effect of its decisions on those residing outside the "gate," then it is very likely the military will not be welcomed by the majority of Americans that reside on Guam which would be a very unfortunate set of circumstances.

A Guam Resident,  
U.S. Citizen and  
Vietnam Era Veteran

**I-248-008**

Thank you for your comment. For discussion of H-2B workforce issues, please see Appendix F of the DEIS, Socioeconomic Impacts Assessment Study (SIAS), Section 4.3.2.4. For discussion of potential impacts on standard of living please see Section 4.3.1.4 of the SIAS. Guam laws regulate some wages in the Guam economy; the scope of the DEIS does not include critique of the laws of Guam, nor a critique of DoD contracting policies.

**I-248-009**

Thank you for your comment. The military secures its bases and property primarily to protect its facilities, personnel, and other assets; this is typical of military bases everywhere, including the U.S. mainland. Access to and through military property would be provided, and in many cases, access is allowed to use or visit recreational and cultural resources. These issues on base security, public health and safety, and access will be emphasized in the Final Environmental Impact Statement (FEIS). The military base, in itself, is a community. It includes military personnel, housing for the military and their dependents, medical and dental facilities, discount stores, recreational areas, and schools. These are provided for the benefit of the military personnel and their dependents. The cohesion of the military base, like any social group, is based on the similarity of their jobs and duties, objectives, age, situation, and other military affiliation. Subsequently, their similarities and benefits within the base are not the principal reasons for what appears to be "a separation from the local community." DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to

Labor Code	Occupation	Average	Annual	Average	Annual	Difference	Average Increase/yr

## NOTICE OF TEMPORARY JOB OPPORTUNITIES

**2 - FIELD SUPERVISOR (CIVIL WORKS) (1 yr. exp.)** ..... \$13,500/yr.  
Minimum Requirements: Bachelor's degree in Civil Engineering (may be foreign equivalent). One year experience in job offered, project engineer or civil engineer. Guam engineering licensure not required. Duties: Supervise and coordinate activities of construction workers in performing the civil works construction. Reads specifications such as blueprints to determine worker requirements and to plan procedures. Estimate material and/or equipment requirements to complete jobs and assigns work to employees. Order equipment, and construction sites to verify safety and to ensure that the construction workers. Confers with managerial and technical personnel in order to resolve problems and to coordinate activities.

**3 - CEMENT MASONS (2 yrs. exp.)** ..... \$12,870/yr.  
Duties: Smooths and finishes surfaces of poured concrete floors, walls, sidewalks or curbs to specified textures using hand tools or power tools, including floats, trowels and screeds. Spreads soil concrete to specified depth and worksable consistency using float to bring water surface and produce soft tamping. Levels, smooths and shapes surface of freshly poured concrete using straightedge and float or power screed. Finishes concrete surface using power trowel or mats and rubs concrete surface to impart finish. Removes rough or defective spots from concrete surface using power grinder or chisel and hammer and patches holes with fresh concrete or epoxy compound. Molds expansion joints and edges. May sprinkle colored stone chips, powdered steel or coloring powder on concrete to produce prescribed rough concrete surface using broom.

Benefit: Round-trip airfare for off-island hire, food & lodging at \$320.00/mo.  
Interested applicants should apply at Guam Employment Service at the One-Stop Career Center located at BGC Building, 1st Floor, 414 W. Schofield Avenue, Hagatna, Guam. This job offer is open to all qualified United States and to United States workers with disabilities who are qualified, willing, able and available to perform the job. (Ref. No. 20080045) Job references required upon request.

USEPA-approved comprehensive plan that ensures compliance with the compensation requirements of the CWA Guidelines. Selection, scaling, and implementation of appropriate compensatory mitigation actions are being carried out in consultation with USACE, NOAA, USFWS, USEPA and GOVGUAM resource agencies. As more information is gathered, a detailed mitigation plan would be developed to comply with requirements of the USACE-EPA 2008 Compensatory Mitigation Rule. Additionally, the Navy as part of the build-up on Guam has also proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coastal water quality standards and benefit the sea life and people of Guam.

**I-249-002**

Thank you for your comment. The Draft EIS discloses the potential impacts of the proposed actions in Volumes 2 through 6. As you note in your comment, potential mitigation measures have been proposed in the Draft EIS. The measures would serve to avoid, minimize, rectify, reduce/eliminate or compensate for impacts. These potential mitigation measures and best management practices are summarized in Volume 7, Chapter 2. The measures are subject to change based on the comments received during the public review comment period and during regulatory agency negotiations or permit application approvals. The mitigation measures have been updated in the Final EIS.

**I-249-003**

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the

Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

**I-249-004**

Thank you for your comment. Please see response to I-249-001.

**I-249-005**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely

to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-249-006**

Thank you for your comment. Please see population forecasts presented in the DEIS in Appendix F, Socioeconomic Impact Assessment Study Section 4.2.

**I-249-007**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Rec'd 21 JAN 2010

JGPO c/o NAVFAC Pacific  
258 Makalapa Drive, Suite 100  
Pearl Harbor, HI 96860-3134  
Attention: GPMO/JGPO c/o NAVFAC Pacific  
258 Makalapa Drive, Suite 100  
Pearl Harbor, HI 96860-3134  
Attention: GPMO

Submitted for your review and response are my comments on the *Draft EIS for GUAM AND CNMI MILITARY RELOCATION: Relocating Marines from Okinawa; Aircraft Carrier Berthing; and Air Air and Missile Defense Task Force*. The comments are submitted under the National Environmental Policy Act and Council on Environmental Quality Regulations regarding Federal agency compliance with NEPA. **There is no need to send me a paper copy of the Final EIS nor to send me a CD of the Final EIS.** My comments address the use of depleted uranium munitions by the military both historically on Guam and in CNMI, and in the context of this proposal, and whether depleted uranium (DU) munitions are proposed for training operations on Guam and/or in the CNMI.

I-250-001

I-250-002 1. The Final EIS should clarify if the US Department of Defense and/or any Agency of the US Government historically used munitions containing DU on either Guam or in the Commonwealth of the Northern Mariana Islands (CNMI) or in the previous jurisdiction of the Trust Territory of the Pacific Islands. If DU munitions were used in either locale, or in both locales, the Final EIS should – in the interests of full NEPA disclosure - address the location(s) where DU munitions were used in training operations; the year(s) when DU munitions were used; the estimated amount (volume) of DU munitions used at each location or locations; and the level/scope/extent of radioactive contamination from use of DU munitions at the location(s). It should address if the governments of Guam and CNMI have been adequately informed regarding any historic use of DU munitions at the location(s).

I-250-003 2. The Final EIS should clarify if the Department of Defense and/or any Federal agency plans to use DU munitions on

#### I-250-001

Thank you for your comment.

#### I-250-002

Thank you for your comment. Volume 2, Chapter 17 and Volume 3, Chapter 17 provide historical waste site information of areas potentially impacted by proposed DoD military expansion on Guam and the CNMI respectively.

#### I-250-003

Thank you for your comment. The document discusses the proposed training missions for Guam and the CNMI including locations, likely munitions and explosives of concern (MEC) to be used, their potential impact, etc.

I-250-004

Guam and/or in the CNMI under any action alternative. If so, the Final EIS should clearly address the location(s) where DU munitions are proposed for use; the amount (volume) of DU munitions reasonably expected to be used in training operations; how the Department of Defense would address environmental contamination from the use of DU munitions; and coordination with applicable Federal agencies and the governments of Guam and/or CNMI to address health and environmental concerns associated with using DU munitions. The Final EIS should also address whether the Department of Defense (DoD) currently uses DU munitions in training operations at any location under the sovereignty of the United States since DU use at other sites would reduce the need to use DU munitions on Guam and/or in the CNMI.

I-250-005

The Final EIS should address if DU munitions have been historically used by the US military at any location(s) on Okinawa or other islands in the Ryukyu Islands chain/Okinawa prefecture, and, if so, provide detailed information on the location(s) where DU munitions were used; the amount (volume) of DU munitions used; the year(s) when DU munitions were used; and the level/scope/extent of radioactive contamination from use of DU munitions in the Okinawa prefecture. The Final EIS should address whether the Government of Japan has been formally informed by the US Government regarding use of DU munitions at the Okinawa location(s) and/or elsewhere in the Ryukyu Islands chain, which were under US jurisdiction from 1945 until 1972.

Thank you for your full response to these comments in the Final EIS. Sincerely,

Dave Tomsovic. 183 Flournoy Street, Daly City CA 94014

**I-250-004**

Thank you for your comment. Please see response to I-250-003.

**I-250-005**

Thank you for your comment. The use of DU on Okinawa or the Ryukyu Islands is not in the scope of this document.

REC'D 21 JAN 2010

Dear Joint Guam Program Office,

Transmitted herewith are comments submitted to the Department of the Navy and the Joint Guam Program Office stating legitimate public concerns against the proposed firing range activities under Alternative A and B of the DEIS, Volume 2 (2.3, 2.5).

I humbly request you consider these impact statements during the course of your deliberation.

I thank you in advance for your kind and prompt attention.

Sincerely,

  
Steven S. Unpingco

Thank you for this opportunity to comment. My name is Steven S. Unpingco and I am a resident and landowner in Sasayan Valley, an area designated as proposed alternative sites for Live Firing ranges under the DEIS.

I am neither in favor nor against the proposed massive buildup but I will keep an open mind. I may be inclined to support the DEIS proposal provided there is no land acquisition by condemnation, and that the buildup does not inhibit Guam's ability to provide essential services and a safe, sound and healthy quality of life.

At the outset, land condemnation rekindles painful memories in Guam's history from post World War II to present. The DEIS fails to address the contentious issue of land condemnation and there is no data on the impact that eminent domain proceedings would create. DOD has the moral duty to consider the history of land taking and to reflect on the dark chapter of land being taken away by coercion and oppression. This history is well recounted in Resolution 258 authored by Senator Judith Guthertz. Furthermore, according to the Senator, Admiral Bice from JGPO assured her when asked the pointed question of whether there will be any land condemnation, he replied, "the buildup will be within the footprint of the military bases."

In addition to cultural sensitivity, land condemnation is highly objectionable for the following reasons. First, DOD currently owns sufficient land that should be exhausted prior to condemning more land. Guam is not getting bigger in land size and land space is very limited. DOD alone owns more property than Gov Guam. The ownership of approximately one third (1/3) of Guam's total land mass provides sufficient land space for DOD to conduct live fire training activities. During peacetime in this pacific region, DOD owns huge tracts of land spread all over the island. Patti Point is

**I-251-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-251-002**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-251-003**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-251-004** | suitable for a firing range because of its isolation, designation of marine preserves barring recreational and fishing activities, and the freedom of action to use base facilities without restriction.

**I-251-005** | Second, the DEIS dismissed DOD candidate sites for a firing range based on anticipated public concerns, the impact that Surface Danger Zones (SDZ) would have on recreational activities and traditional fishing areas on the West side. This concern under the DEIS feasibility criteria should also apply to Sasayan Valley in the East under Proposed Alternative B (Firing Range Complex) where recreational and traditional

**I-251-006** | fishing areas are also prevalent. Trolling for pelagic fish, shallow bottom and deep bottom fishing, spearfishing and casting along the coastline are pastime activities that the Valley offers with the abundance of various fish species. You do not see boat traffic only because there are no boat ramps and mooring facilities on the East side.

Recreational activities in Sasayan Valley are not limited to fishing, however, for many residents and tourists visit the caves, swimming holes and ancient Chamorro villages located at the Alternative B site. Hikers and joggers traverse the cliffline to the coastline to enjoy the majestic view of the Pacific Ocean and pay homage to ancient village sites. In the course of their trek, hikers often encounter wildlife and discover indigenous artifacts, potteries, caves, caverns and rock shelters where ancestors sought refuge from storms.

**I-251-007** | Equally important to the public is the impact that explosive grenade and demolition ranges may have on the environment. What were the environmental considerations, if any? Is there any scientific study on any potential environmental degradation or possible lead contamination from these activities and its impact on soil,

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-251-004**

Thank you for your comment. Please see response to I-251-003.

**I-251-005**

Thank you for your comment. In addition to the reasons mentioned for eliminating the alternatives for the live fire range in the west, there was a concern about the proximity of civilian populations and the likelihood of future conflicts with land uses.

**I-251-006**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-251-007**

Thank you for your comment. The DoD and regulatory agencies are

I-251-008 | geological resources, groundwater lens and fresh water aquifer which is prevalent in the area. Is there a real environmental impact study on the effects that these activities have on wildlife, vegetation, maintenance of native ecosystems? What about the potential threat to aquatic life, habitat, marine communities and ecosystems? Any research on the effects of explosives in a high fire danger area?

I-251-011 | What management strategies does the DEIS offer to mitigate the effects of the proposed activity and improve our environment?

I-251-012 | What about the legitimate concerns of noise levels and public nuisance caused by live fire training and aviation training in Anderson South? If Alternative B was selected, the proposed training activities will be much closer to Adacao Elementary School and the dense population of Latte Heights. Hand grenade explosions, machine gun fire, helicopters, humvees and transport vehicles will emit noise pollution that will impact the school and the residential community within close proximity.

I-251-013 | Third, query whether this buildup will allow Gov Guam to provide essential services and improve the quality of life for all. An abrupt and accelerated population growth of 267,665 by 2014 in an island so limited in size may be very problematic. This unprecedented surge poses serious challenges on how the local government can provide critical public services relating to health, education, public safety and the general welfare of all people, including the military. There will be a need for more public health centers, schools, law enforcement entities as well as increase in personnel, equipment and supplies for the delivery of basic government services. Pursuant to this massive buildup, Guam is largely responsible to secure financing to help carry out its off base projects and programs related to the buildup. At a time when the Government is operating under a

equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from potential contaminants. Refer to Volume 9, Appendix D, Project Description Technical Appendix, Munitions, for a discussion of the munitions and constituents of concern associated with the proposed ranges. Range designs include targets with physical barriers behind the target, such as an earthen berm, that are designed to stop and contain the spent round. Best Management Practices (BMPs) are used to further contain spent rounds, fragments and materials from weapons firing, and reduce any impacts to the environment. The proposed ranges will be designed and maintained in accordance with all applicable federal and Government of Guam regulations. Specifically, Military Handbook 1027/3B contains procedures for reducing potential impacts from ranges through the implementation of BMPs. These include introducing soil amendments, vegetation management, engineering controls, instituting contaminant monitoring, reclaiming, and recycling. With ranges, lead is the primary leaching contaminant of concern and best management practices can minimize or prevent leaching of this constituent. Impact rounds from pistol rounds generally stay intact and impact rounds from rifle rounds often fragment. Intact rounds and rounds fragmented into relatively large pieces are not easily transported by natural transport mechanisms (such as groundwater) and are largely contained within the berm or physical barrier where they can be recovered and disposed. Through the proper design of ranges, application of BMPs, and monitoring, the potential for groundwater contamination would be minimized. BMPs can reduce or eliminate the leaching of lead to the environment. These procedures include controlling soil pH to between 6 to 8 to prevent dissolution of lead, mining of lead from back stop berms, implementing a soil leaching monitoring program, and adding phosphate containing soil amendments to bind dissolved lead to the soil. Prior to building the ranges, an engineering study would determine the minimum depth of soil

I-251-014

deficit of approximately 490 million dollars coupled with the estimated costs of the buildup of 6.1 billion dollars, Guam will be financially insolvent to meet the buildup requirements of roadway improvements, to link the commercial port to the military bases, power and water infrastructure, port expansion and expansion of public health and social services.

Guam needs all the land it currently owns to augment its borrowing ability. Guam needs funding sources and revenue streams to defray or underwrite the substantial costs of the buildup. Guam needs more than just consultants providing technical and financial services. Guam needs guaranteed funds to fully or substantially subsidize the costs of the buildup requirements – nothing more, nothing less.

I-251-015

Turning back to the issue of land condemnation, it is not the Politicians, DOD, Corporations and A&E firms that will incur the adverse impact of this buildup. It is the private landowners who detrimentally rely on their property for their livelihood. It is the landowner who leases his property to produce income or borrow against in order to meet life's many challenges. It is the landowner who is gravely ill who needs to pay his medical bills so he can live the next day that pays the high price of land condemnation. It is the landowner with families who wishes to subdivide his property or deed his property so that each child can make a decent living. It is the farmer who needs to put food on the table or sell his crops to pay tuition fees and day care services. It is the landowner who has to pay for the most useful tools in life – a college education – for each child. It is the landowner who invested substantial sums of money to purchase huge tracts of land so that someday he can develop the property and contribute to revitalize Guam's economy. It is the less fortunate and landless individuals whose only hope for land is to acquire land

cover to ensure sufficient soil cover of the limestone, and to assess the suitability and optimum technique to add soil amendments such as phosphate to prevent lead leaching. In addition, when percolating water reaches the porous limestone the pH will increase, encouraging the precipitation of lead out of solution. The DoD will monitor for selected contaminants of concern. If monitoring identifies significant impacts, such as indications that chemicals of concern may exceed regulatory standards, reduce beneficial uses, result in adverse human or environmental health effects, or conflict with federal or Government of Guam regulations, then additional action would be taken to address these impacts. Furthermore, the EIS will be revised to explain how volcanic basement rock protrudes up through the limestone of the NGLA, thus separating nearly all of the proposed ranges from groundwater supply wells. The low permeability of the volcanic rock acts as a barrier to groundwater movement. A figure in the EIS will support this text description.

#### **I-251-008**

Thank you for your comment. Up to 27 acres of disturbed secondary limestone forest would be removed to construct the grenade training area. There are no threatened or endangered species or other sensitive species present in the immediate vicinity of either of the proposed grenade range sites so there would be no impacts to these. As described on p. 10-94 of Volume 2, there would be increased use of the existing Andersen AFB Northwest Field demolition facility. Its use is expected for one event per day up to 25 days per year. Noise levels that could possibly be a concern for wildlife would be increased over a total of 1,385 acres under the proposed action. As explained on the page noted above, to evaluate this potential, monitoring of the species in areas surrounding the demolition area would be conducted to determine potential noise impacts. If this monitoring determined that the fruit bat (the only endangered species currently present in the area) was being

I-251-016 | leases from the Chamorro Trust lands. It is our schoolchildren of Guam who need  
schools and are entitled to an adequate education. It is our young adults, families and  
I-251-017 | spectators who will be displaced from the Guam Raceway Park, thereby taking their  
passion of drag racing to the streets. These are just some of the many more people that  
will suffer the devastating impact of land condemnation.

I-251-018 | Even if the DOD exercises Alternative A, the landowners in the contiguous  
Sasayan Valley will still be detrimentally affected by the proposed firing range activities.  
Environmental concerns, air and water degradation, noise level and public nuisance  
concerns, reconfiguration of public roads, interference with public and private easements,  
traffic congestion and traffic hazards, and other public concerns may constitute legal  
cognizable claims for inverse condemnation. Landowners under both Alternatives A and  
B may have viable and legitimate claims for diminution in value of their real property as  
a consequence of the proposed firing ranges under the DEIS.

I-251-019 | I acknowledge the purpose and need for the buildup and appreciate the bilateral  
relations with Japan under the Treaty requirements. I am aware of the need for global  
repositioning and operational requirements so that the U.S. may mobilize quickly to meet  
contingencies around the world, whether to engage an enemy in hostilities, provide peace  
keeping missions or disaster relief.

I-251-020 | Although our national security interests are compelling, that does not mean that  
the U.S. could not strike a balance and recognize that Guam's local interests are equally  
as compelling. A lesser restrictive alternative to land condemnation is land lease and/or  
land exchange. This equitable option will not deeply polarize our community. It serves

affected, techniques to reduce noise generation, such as noise barriers, would be employed.

### I-251-009

Thank you for your comment. As identified in the EIS, Volume 2 and 4, Chapter 11, the proposed dredged area within the commercial harbor was previously dredged over 60 years ago, and the EIS identified significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7. Compensatory mitigation for unavoidable coral community impacts includes the following options: Option 1: Artificial Reefs within Apra Harbor or Other Locations; Option 2: Watershed Restoration and Management (Afforestation, Apra Harbor and/or Philippine Sea Riparian Enhancement, Stream bank stabilization component [all project goals to reduce sediment discharge into nearshore waters]) Option 3: Coastal Water Resource Management (Shallow Water Reef Enhancement); and Option 4: In-Lieu Fee or Mitigation Banking Program. The final conceptual determination would not be made until the Record of Decision on this EIS. More detailed identification of potential mitigation would be done during the USACE permit process. Both artificial reefs and watershed management projects would be considered as potential compensatory mitigation, and it is possible that a combination of those potential mitigation efforts that are listed below would be appropriate. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function

I-251-020

both the interests of DOD in advancing the buildup and Guam's interest in providing essential services and a safe, clean and healthy environment.

President Franklin Roosevelt in his last inaugural address after the years of war, casualties and the enormous sacrifices said, "We have learned to be citizens of the world, members of the human community."

I wish to prevail upon the benevolence of the United States of America, please do not condemn any more land. Lease or exchange so we may all live in peaceful co-existence as members of the human community.

Thank you and may God bless the United States of America and our island of Guam, our families and our future.

Steven S. Unpingco

### I-251-010

Thank you for your comment. Proposed fire management activities are discussed in the EIS. A Fire Management Plan is being prepared and will be in place (with the appropriate protocols for monitoring fire conditions, ensuring proper equipment and personnel are available, and appropriate cooperative agreements are in place) to address potential fire concerns during military training. Sections 3.1.1.4 and 3.2 provide a discussion of the history of fires on Guam as well as an analysis of wildfire concerns.

### I-251-011

Thank you for your comment. Volume 7, Chapter 2 of the Draft EIS summarizes proposed mitigation measures and best management practices that have been proposed in Volumes 2 through 6 of the Draft EIS under the various resource sections. These are subject to change based on comments received during the Draft EIS comment period and consultations with regulatory agencies. The proposed measures serve to avoid, minimize, rectify, reduce/eliminate or compensate for impacts. The potential mitigation measures have been updated in the Final EIS, based on comments received.

### I-251-012

Thank you for your comment. Planned helicopter operations would not be increased over NCTAMS as a result of this action. At this time there are no plans to soundproof homes at NCTAMS.

### I-251-013

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation

program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-251-014**

Thank you for your comment. See response immediately above.

**I-251-015**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-251-016**

Thank you for your comment. As documented in this EIS, DoD

acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other federal programs and funding sources that could benefit the people of Guam.

**I-251-017**

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International

Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners, any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural

resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

**I-251-018**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-251-019**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-251-020**

Thank you for your comment. Please see response to I-251-018.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 220

Received: 1/20/2010 1:27:27 PM

I-252-001

The Federal EPA's SuperFund website for Andersen AFB shows the Marbo Annex from prior military activity to have contaminated Guam's sole Water Aquifer. The Federal EPA states the military must get a waiver as there is no possible way to clean the contamination in the water table.

Link here:

<http://yosemite.epa.gov/r9/sfund/r9sfdocw.nsf/vwsoalphabetical/Andersen+Air+Force+Base?OpenDocument>

Also in the Draft EIS on page 4-28 it states Andersen AFB's Andy South supply wells, half have increasing chloride levels and this is with only current load/demand. They are starting to suck in sea water below the water table at current load. It also states several wells already exceed maximum allowable levels of chlorides.

I-252-002

To remedy this they propose drilling 22 NEW wells at Andersen AFB for demand. Andersen AFB is full of landfills and contamination and the Agency for Toxic Substances and Disease Registry has reported on them not long ago they are not a Public Health Threat...Back when they cut down personnel and limited access to land, water, soil. Now this EIS proposes to threaten the ATSDR ruling that Andersen is not a public health threat. With 22 New wells being put into Andersen AFB the contamination cited by ATSDR will be opened up and will become a public health threat.

By Andersen AFB pumping water from underneath of all the Landfills beneath them from the prior military activities this will induce a demand below them to recharge what they have pumped out. Instead of the slow gradual progression of metals, PCB's, Dioxins from the old landfills on Andersen AFB into the Water Aquifer there will be a vacuum created pulling those pollutants quicker into the water table from those military landfills up North.

Volume 2, 4-3 states the Guam EPA enforces the Clean Water Act on Guam. Why is it that anyone fails to implement the Clean Water Act on Guam? The Navy Water Quality Report shows chlorine and lead exceeding maximum allowable levels. Chlorides are near maximum levels at current pumping rates. pH is high due to Organic Compounds in the wells. Total dissolved solids exceed limits in wells. Disinfection byproducts in water exceeding allowable levels.

The Guam Water Quality Report is worse:

[www.guamwaterworks.org/documents/WaterQualityReportData2008.pdf](http://www.guamwaterworks.org/documents/WaterQualityReportData2008.pdf)

Chloride over 3 times Allowable levels. Chlordane detected past Allowable Levels which requires charcoal filtering of public water system.

There's no Water Quality Report from GWA for 2009. CWA not enforced.

### I-252-001

Thank you for your comment. As described on the EPA website referenced by the commentor, the Record of Decision (ROD) signed in 1998 for the deep groundwater contamination in the MARBO Annex (located in Andersen South) identifies selected natural attenuation as the groundwater remedy. However, monitoring indicates that the concentration of contaminants located directly over the salt water zone are not decreasing. Remedies to reduce the deepwater concentrations would cause upwelling of salt water into the freshwater portion of the aquifer used for drinking water. EPA intends to amend the ROD to propose a waiver for technical impracticability. The ROD will be amended to require implementation of institutional controls prohibiting the use of the groundwater in the area of the deep plume. The final EIS has been updated to reflect current status of this ROD.

The following sentence from Volume 2, page 4-28 will be revised in the FEIS, "An analysis of chloride concentrations in Andersen AFB water supply wells at Andersen South indicates that chloride is increasing in approximately half of the wells and concentrations in several wells exceed the Secondary MCL (NAVFAC Pacific 2008)." Elevated chloride levels were identified in some Navy owned wells, but these wells are taken out of production until the problem is mitigated or the well is replaced. The majority of chloride readings for wells in the Andersen South are below the secondary MCL (less than 100 mg/L). McDonald and Jensen (2003) suggest that there has been a distinct chloride increase over time, which they interpreted as being indicative of over-pumping but this conclusion is drawn primarily from GWA owned well results.

### I-252-002

Thank you for your comment. As stated in Volume 2, Section 4.1.3.1, the Agency for Toxic Substances and Disease Registry (ATSDR) evaluated past exposure concluded that it does not expect any public health effects, now or in the future, as a result of individuals drinking water from

the Andersen AFB water supply or any other wells on Guam. Installation of the planned wells will not result in adverse health effects to the military or civilian populations. Test wells are planned for installation as a first step in constructing the water supply for the Marine Corps base. The location of the test and permanent wells will be selected with careful attention to surrounding features. Wells will not be located on installation restoration (IR) sites which could potentially release contamination (e.g., landfills). Groundwater samples will be collected from the test wells to assess water quality. Further, the top of groundwater is located hundreds of feet below the ground surface. Pumping to collect groundwater will not cause a release of contamination from landfills or other IR sites.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 222

Received: 1/20/2010 2:16:49 PM

I request an extension of time of public commenting period. According to 40 CFR Section 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 90 day commenting required/accommodated as requested by our Legislature is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

#### I-253-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-253-001

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 224

Received: 1/20/2010 10:40:36 PM

My name is Joseph Camacho, a descendent of Marcello Sgambelluri and I am currently an MBA student at Santa Clara University. I was home for the holidays and had the chance to attend the hearing on December 29, 2009.

I am writing to you in regards to the Sasayan property that the U.S. military is considering as a site for their training facilities. I would like to state first off that I do support the military build-up for the island of Guam. The presence of the U.S. government and military has helped the island of Guam to advance much faster than many of the other islands in the Pacific. However, I must point out that Guam is desperately in need for a more advanced infrastructure and other revenue sources to improve the overall economic situation. In spite of this, I strongly oppose the use of condemnation or eminent domain as a means for the military to acquire land (i.e. the Sasayan property) for the following reason:

Although the U.S. government is entitled to use eminent domain to acquire land, I believe that it is a breach of our rights as citizens of this country. As the 5th amendment to the U.S. constitution states, "no person shall be deprived of life, liberty or property, without due process of law; nor shall private property be taken for public use, without just compensation." If the military would like to use the land in Sasayan as their training grounds, then it would be just for them to provide appropriate compensation to the private-landowners that will be affected. However, this does bring a second point to my attention that is equally important as the use of condemnation to acquire the land, and that is the effect that the training will have on the property.

Sasayan is one of the few pristine locations on the island of Guam. We are living in a time when world governments (including the U.S. government) have been pushing people around the world to go green. Global warming is affecting our planet and yet this untainted property is being considered as a training facility to use destructive weapons, which will harm and pollute the environment. There are many lots of land on the island that can be used as a training facility rather than this beautiful plot of land.

Thank you so much for allowing me the opportunity to voice my concerns.

I-254-001

I-254-002

**I-254-001**

Thank you for your comment.

**I-254-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 225

Received: 1/21/2010 12:29:53 AM

I-255-001

It states in Volume 2 8-61 Under "Land and Submerged Land Use" that "Access to property associated with either alternative would be limited to authorized personnel throughout most of the year". If I own land in the Sassayan Valley and build a house on that land, would that mean I could be denied access to my own house? Or would I have to live with the noise associated with a "muzzle blast" and a "bow shock wave" as described in Volume 2 6-36 Under "Noise"? If Alternative B is not chosen and Alternative A is for the proposed firing and non firing range, would Sassayan Valley landowners still be compensated or mitigated for having to shoulder the burden of having a firing range for a neighbor? I propose that the No Action Alternative be chosen and that the DoD revisits their plans for the proposed firing range. I suggest that DoD as a whole, and not just the MarineCorps, diligently work to resolve this situation so that ONLY military lands are utilized and that there would be no acquisition of Non-DoD lands. Naval Station and Andersen Air Force Base both contain enormous parcels of land that can be utilized for the location of a firing range. Although it may not be as convenient for the Marines, I believe it would be in the best interest of the people of Guahan and would help minimize some of the growing resentment towards the United States military.

#### I-255-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value. If access were restricted to a point where a person could not access their own home and/or property, this would be considered in conjunction with the total land acquisition requirement.

## COMMENT SHEET

Please for the love of god don't shut down/take over the PC Lujan elementary school soccer field. It is the last place we are able to play ultimate frisbee, having been forced out of the few remaining fields in the past 5 years. There is little enough open green space as is, and the military has most of it.

I-257-001

### I-257-001

Thank you for your comment. Please note that the Pedro C. Lujan School lies outside of the project area in Naval Base Guam Barrigada and, as such, will not be affected by the proposed action.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 228

Received: 1/21/2010 3:18:12 AM

I-258-001

It states in the DEIS that our coral reefs will be destroyed for the passings of nuclear submarines. If its so, why are you doing so knowing that by destroying our coral reefs, our island would have more chances for a tsunami attack. Have we forgotten about the tsunami that hit Indonesia in 2006? Have we forgot about how many lives were taken because of it? The only mitigation I honestly can think about is for the military build up not to happen. This is one of my many reasons for choosing NO ACTION on this issue.

#### I-258-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

As identified in the EIS, the proposed dredged area within the commercial harbor was previously dredged over 60 years ago and the EIS did identified significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) are not expected to be impacted by dredging direct or indirect (sedimentation) activities based on computer tide/current modeling within Apra Harbor.

The EIS also identifies the compensatory mitigation process and project options in Volume 4, Section 11.2.2.6 - Implementation of Coral Restoration, and Section 11.2.2.7 - Development of Potential Mitigation Proposals. In regards to the compensation process for coral loss, the USACE first makes a determination that potential impacts have been avoided to the maximum extent practicable (striving to avoid adverse impacts); remaining impacts would be mitigated to the extent appropriate and practicable by requiring steps to reduce impacts; and finally, compensate for aquatic resource values. The Navy has prepared a Habitat Equivalency Analysis to establish these values based on coral habitat loss. This sequence is considered satisfied where the proposed mitigation is in accordance with specific provision of a USACE- and

USEPA-approved comprehensive plan that ensures compliance with the compensation requirements of the CWA Guidelines. Selection, scaling, and implementation of appropriate compensatory mitigation actions are being carried out in consultation with USACE, NOAA, USFWS, USEPA and GOVGUAM resource agencies. As more information is gathered, a detailed mitigation plan would be developed to comply with requirements of the USACE-EPA 2008 Compensatory Mitigation Rule. There is no correlation between the implementation of the proposed action and increase impacts from a tsunami. The Navy, as part of the build-up on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coast water quality standards which would benefit the coral reefs, sea life and people of Guam.

Guam is the home of many. It is an island paradise many tourists often visit for the beautiful beaches and relaxing lifestyle. Putting a firing range near the golf course in Pagat that many tourists play at is not going to help our tourism industry but would rather hurt it. Bringing that nearly 80,000 people would almost certainly discourage people from visiting our island for vacation. I say NO ACTION to the build up for the reasons stated above.

I-259-001

#### I-259-001

Thank you for your comment. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study, Section 4.3.7 for expected impacts on tourism.

COMMENT SHEET

I-260-001

My comment is related to the dredging in Apra Harbor. Guam's coral reefs are in lots of trouble as it is. Sedimentation has damaged southern reefs considerably, reducing coral cover from 50 to less than 25% in several areas. SCUBA spearfishing and monofilament nets have resulted in dwindling fish stocks and pollution from an increasing population requiring development of roads and land, is highly and negatively impacting these ecosystems. Coral reefs are part of the livelihoods of the people of Guam and part of their culture. The shoals in Apra Harbor are very popular amongst divers and one of the only available areas for water sports in times of bad weather, given their protection. Furthermore, these reefs are the most biodiverse in Guam and support a variety of pelagic species not seen elsewhere. The proposed dredging by the military will upset the balance of these ecosystems, by killing a large portion of this living structure. Mitigation suggested is in the way of nets, which (1) have an opening size that still allows sediment to flow, (2) will only momentarily result in deposition of sediments along the dredged area, which will remain in place and be affected as soon as the nets are removed, dispersing into adjacent coral reef areas and killing these as well and (3) have been tested only previously in Kilo Wharf where they have caused considerable damage to benthic communities

I-260-002

Due to this rationale, I am proposing two pathways as a solution:  
1) That the dredging be stopped and relocated, perhaps in Umatec, where reefs are already in bad shape and which is also a large, deep and protected bay.  
2) That if Apra Harbor is a must, a pilot study be first conducted to prove to the people of Guam how the proposed mitigation procedures will work before they are implemented. As a marine researcher, I am very well aware that proposed projects don't always turn out as predicted and that there are numerous variables in the marine environment that are rarely accounted for.

I-260-003

My opinion is that the island of Guam cannot sustain 80,000 more. It is already environmentally challenged and the most developed island in Micronesia. I believe the US should build up their forces inside their own country where they will be better managed and more effective.

I-260-001

Thank you for your comment and concern for Guam's coral reef ecosystems. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. As identified in the EIS, the proposed dredged area within the commercial harbor was previously dredged over 60 years ago and is a small percentage of existing reef in Apra Harbor. The EIS identified significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) are outside the direct impact area and not expected to be impacted. Indirect impacts (sedimentation) are also not expected based on computer tide/current modeling within Apra Harbor. The EIS also identifies the compensatory mitigation process and project options in Volume 4, Section 11.2.2.6 - Implementation of Coral Restoration, and Section 11.2.2.7 - Development of Potential Mitigation Proposals. In regards to the compensation process for coral loss, the USACE first makes a determination that potential impacts have been avoided to the maximum extent practicable (striving to avoid adverse impacts); remaining impacts would be mitigated to the extent appropriate and practicable by requiring steps to reduce impacts; and finally, compensate for aquatic resource values. The Navy has prepared a Habitat Equivalency Analysis to establish these values based on coral habitat loss. This sequence is considered satisfied where the proposed

mitigation is in accordance with specific provision of a USACE- and USEPA-approved comprehensive plan that ensures compliance with the compensation requirements of the CWA Guidelines. Selection, scaling, and implementation of appropriate compensatory mitigation actions are being carried out in consultation with USACE, NOAA, USFWS, USEPA and GOVGUAM resource agencies. As more information is gathered, a detailed mitigation plan would be developed to comply with requirements of the USACE-EPA 2008 Compensatory Mitigation Rule.

The Navy, as part of the build-up on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coast water quality standards which would benefit the coral reefs, sea life and people of Guam.

**I-260-002**

Thank you for your comment and suggestions. As identified in the EIS, the proposed dredged area within the commercial harbor was previously dredged over 60 years ago. Significant impacts, however, may be seen to some coral reef, other immobile invertebrates, and some site-attached reef fish. A majority of the species will vacate the area and return when in-water construction is completed. Most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae). The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) are not expected to be impacted by dredging direct or indirect activities based on computer tide/current modeling within Apra Harbor. The Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months, and compensatory mitigation projects to help improve nearshore water quality through upland watershed reforestation/aforestation and/or artificial reef construction, to name a few. The Navy, as part of the "build-up" on Guam has also proposed to

upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coast water quality standards and benefit the coral reefs, sea life and people of Guam. In regards to the compensation process for coral loss, the USACE first makes a determination that potential impacts have been avoided to the maximum extent practicable (striving to avoid adverse impacts); remaining impacts would be mitigated to the extent appropriate and practicable by requiring steps to reduce impacts; and finally, compensate for aquatic resource values. The Navy has prepared a Habitat Equivalency Analysis to establish these values based on coral habitat loss. This sequence is considered satisfied where the proposed mitigation is in accordance with specific provision of a USACE- and USEPA-approved comprehensive plan that ensures compliance with the compensation requirements of the CWA Guidelines. The Navy is funding additional studies on southern reefs to look at feasible areas for upland watershed and coral reforestation/afforestation projects among others.

**I-260-003**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-261-001

Thank God for freedom of speech. Guam is where people want to live...beautiful island...beautiful people...and most of all...beautiful freedom! The military buildup is coming whether we like it or not, and in my opinion, it's been so conflicting to hear the many pros and cons of the military buildup. In the best way possible, everyone is entitled to their own opinion. There are worrisome incidents of what may or may not happen with the abundance of military members being here, and yes, Guam's infrastructure is definitely not ready but we have to be realistic and know that while our world is being pressured of its many problems, we have to ensure the safety and security measures for ourselves and our children. As decision was made regarding the relocation of military buildup on Guam, Washington D.C. Leaders need to stop closing their eyes when it comes to Guam receiving all due benefits of being a United States Citizen (for example: war claims). I believe having the military here is a God-send. I have family and friends who are military members and I thank God for them...for their sacrifice to continue obtaining "our" freedom...and most especially, they're doing it all for the Glory and Honor for the Love of Life. I am confident the Department of Defense and the Leaders of our Island, most especially Governor Camacho, will entertain what needs to be done and I'm hoping next Governor of Guam who will be elected this year I live in the NCS area where there are low-flying helicopters, extremely loud and big airplanes flying above my house, which can be annoying at times, but it's only petty. What matters the most is that these military men and women are ensuring they perform their job to the utmost in security measures to protect all whom live on Guam. I want to say Kudos to all who have a voice and have shared their concerns, and continue to pass the knowledge to friends and family regarding our future for our beautiful island of Guam. Remember, voices not heard are sometimes voices not said loud enough...think for your island and share your thoughts.

I understand Guam's strategic value as well as it's vulnerabilities. My concern with the increase in military forces is the impact it will have on the island and the people.

The problem: Guam is very small. With the increase comes more cars, more people, more trash, more violence.

The people of Guam will adapt to the change. We always do. The build-up will happen. Where will we put the trash? How much longer will it take to drive the five miles to work? The violence will happen because of egos and the need to prove ones manhood. My question is how will we as a community (including the military) deal with it? The impact on the utilities should not be left up to the government of Guam. They can barely run themselves. The corruption within the government of Guam is embarrassing and unfortunately will never change.

My Recommendation: Limit families to one vehicle. Put rank restrictions on who can bring a vehicle. Guam is a good place for bike riding (this means a bike path has to be make). If possible, make Guam a hardship tour or limit the amount of command sponsored families that come. This will limit the amount of dependents that come to Guam. Families can come to visit, but we really don't have the space for so much people. I won't comment about the trash. I'm sure I don't want to know where it all goes now. The military needs to head up the project to improve the utility structure on Guam. Look what happened when Gov Guam was given money to improve the schools...DOD built their own schools.

The outside workers that come to build should not be allowed to put roots down and further increase the population. We are in for a rough few years until everything settles. The people of Guam will endure; just don't bully us to accept change. We will do it in our own time and our own way.

I-262-001

I-262-002

I-262-003

### I-262-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

### I-262-002

Thank you for your comment. Although DoD does not plan to restrict the number of vehicles a person may own, using alternative transportation, in addition to carpooling, would be encouraged.

### I-262-003

Thank you for your comment. Employers of H-2B workers are required to prove that workers have left Guam once the particular project the worker was brought in for is completed. Please see Appendix F of the DEIS, Socioeconomic Impact Assessment Study, Section 2.1.1.4 for further information.

Your additional mitigation recommendations have been taken under consideration. Expanded mitigation discussion is provided in the FEIS (Volume 7).

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

#### I-263-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 243

Received: 1/21/2010 12:29:38 PM

"There would be a significant mitigable impact due to forced sale of land to the federal government for main cantonment and firing ranges on Guam. As described in the approach to analysis in Volumes 2 through 6, it is assumed landowners are not interested in selling their land. Although there may be landowners who are interested in selling their land, the assumption of significant impact remains until negotiations are complete. This impact could be mitigated through long-term leases of the property instead of purchase; however, this may not be possible in all cases and the significant mitigable level of impact is retained in the summary of impact. There would also be relocations, and land acquisition or long-term lease for roadway improvements."

**I-271-001**

If a land owner does not want to sell their land, than I'd hardly call forcing a lease on them mitigation. I think the land owners should also be concerned about the state the land will be in upon the end of the lease. History, on our island, has shown that land the military has returned to land owners is often contaminated. An example is Tiyan. Will the land owners lease a pristine piece of land and be returned a superfund site?

The military should not acquire any more land! They have enough! I insist on the no action alternative. If they need a firing range so bad they should use the Andersen golf course!

**I-271-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

Received: 1/21/2010 12:51:02 PM

"The capital and labor required for construction would be an irreversible and irretrievable commitment of the following resources:

- ☒ Soil would be displaced by construction and training activities.
- ☒ Limited areas of coral reef habitat would be permanently loss as a result of dredging in Apra Harbor.
- ☒ Some terrestrial habitat for special status species would be permanently lost on Guam.
- ☒ Increases in vessel traffic in Apra Harbor would permanently impact marine biological resources.
- ☒ Certain archaeological sites, traditional cultural properties and historical buildings would be permanently removed or disturbed.
- ☒ Some wetlands could be permanently lost on Guam."

I-272-001 |

I-272-002 |

This is absolutely unacceptable!! Any amount of coral reef loss is unacceptable. Permanently impacting the marine life, at Apra Harbor is unacceptable. Disturbing or removing archeological sites is unacceptable.

The people of our island have a very strong connection to the land. The D.O.D. may be unable to understand this, but it doesn't mean it is not true. You can not throw money at impacts and expect them to go away. The culture and people of Guam can not survive if the build up goes through. No action on all alternatives. No build up!

I-272-003 |

**I-272-001**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. As identified in the EIS, the proposed dredged area within the commercial harbor was previously dredge over 60-years ago. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) are not expected to be impacted by dredging direct or indirect (sedimentation) activities based on computer tide/current modeling within Apra Harbor.

The EIS also identifies the compensatory mitigation process and project options in Volume 4, Section 11.2.2.6 - Implementation of Coral Restoration, and Section 11.2.2.7 - Development of Potential Mitigation Proposals. In regards to the compensation process for coral loss, the USACE first makes a determination that potential impacts have been avoided to the maximum extent practicable (striving to avoid adverse impacts); remaining impacts would be mitigated to the extent appropriate and practicable by requiring steps to reduce impacts; and finally, compensate for aquatic resource values. The Navy has prepared a Habitat Equivalency Analysis to establish these values based on coral habitat loss. This sequence is considered satisfied where the proposed mitigation is in accordance with specific provision of a USACE- and USEPA-approved comprehensive plan that ensures compliance with the compensation requirements of the CWA Guidelines. Selection, scaling, and implementation of appropriate compensatory mitigation actions are

being carried out in consultation with USACE, NOAA, USFWS, USEPA and GOVGUAM resource agencies. As more information is gathered, a detailed mitigation plan would be developed to comply with requirements of the USACE-EPA 2008 Compensatory Mitigation Rule. The Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coast water quality standards which would benefit the coral reefs, sea life and people of Guam.

**I-272-002**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO and other stakeholders in our efforts to avoid, minimize, and/or mitigate adverse effects to cultural resources.

**I-272-003**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans

to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-274-001

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c),... nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam."

(According to federal regulations, an EIS should "normally" be less than 150 pages. For "proposals of unusual scope or complexity" you'd normally get 300 pages. That's probably why the 45 day commenting period is normally sufficient, but the 90 days given to Guam residents to review 10,000 pages is not.

### I-274-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

According to federal regulations, an EIS should "normally" be less than 150 pages. For "proposals of unusual scope or complexity" you'd normally get 300 pages. That's probably why the 45 day commenting period is normally sufficient, but the 90 days given to Guam residents to review 10,000 pages is not.

I would like to request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 commenting period required by 40 CFR §1506.10(c) is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guahan. Granting us more time to comment would allow for the participation of more concerned citizens of Guahan. Many people have struggled to clearly comprehend the DEIS thus far and such an extension in time would alleviate the growing frustration associated with this buildup. It is difficult to decipher the military terminology used throughout the DEIS and therefore I strongly encourage the DoD to allow us ample time such as 1 year to fully respond to the DEIS.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 257

Received: 1/22/2010 6:09:10 AM

Volume 2, Chpt 16 of the DEIS/OEIS draft dated November 2009 refers to Guam as a "high risk public safety area during times of natural and man-made disasters." The federal government does not mention in this study whether or not it will be providing funds to Guam to increase it's police presence to compensate for the tens of thousands of construction workers and the relocation of its marine personnel.

Prior to any construction, and especially the relocation of its marine personnel, the federal government must address the need for increased police protection for the Guam citizens against the inevitable increase in crime. The financial burden of additional police personnel, which will surely be required, should not be the burden of the people of Guam. It should be anticipated that due to social, ethnic, cultural, and other differences, there will be an increase in crime when the 10,000+ construction workers are relocated to Guam.

#### I-284-001

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

I-284-001

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 258

Received: 1/22/2010 6:11:13 AM

I-285-001

Volume 2, Chpt 16 of the DEIS/OEIS draft dated November 2009 refers to Guam as a "Medically Underserved Area." The paper goes further to state that Guam has difficulty in meeting the medical requirements of its population due to chronic shortages of health care providers and the lack of health care specialists. With the introduction of thousands of foreign laborers and other off-island employees to support the construction, and other ancillary services required of the proposed marine base, there is no mention of who, how, and where the influx of off-island people will receive their medical attention.

Prior to the federal government commencing this project, should it go forth, it would seem prudent and socially responsible that this subject be addressed by the construction of new medical facilities and/or the expansion of the current facilities on Guam to care for the anticipated medical need of 10,000 additional people. Further, the current lack of health care providers and specialists also need to be addressed prior to any project commencing.

#### I-285-001

Thank you for your comment. The Final EIS has been updated (Volume 2) to better address impacts on social services.

The DoD has no statutory authority to construct a new public hospital for Guam. However, money from taxes, fees, and reimbursements would support these facilities and services. It should also be noted that in Okinawa, the Government of Japan pays much of the cost (\$2 billion per year) for the Marine base. The DoD plans to have several medical clinics in Guam and a new replacement Naval hospital would provide health services to the military personnel, their dependents, and military beneficiaries. Additionally, it is anticipated H2B workers as well as on-island workers will have health plans and private clinics will provide medical services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

I strongly object to the military's plans to expand its footprint on Guam.

The military must confine its activities to the federal property already under its control.

Do not expect the people of Guam to meekly "take up more indoor recreation".

### I-286-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

By examining the Naval Cadastral Map (attached), it depicts the U.S. Government Properties (unsurveyed) detailing millions of square meters of undeveloped real property. These areas are in the proximity of and between Naval Magazine, and LImatac. The mountain terrains should be considered the probable element for military training to include isolation from townships or nearby communities we do foresee to be affected as in our current objection in the northern proposal. THANK YOU, A. Topasna

# Chinese officials fled overseas with \$50 billion

Chinese officials have fled overseas with billions of dollars in stolen government funds.

**BEIJING (AP)** — Thousands of Chinese officials have fled overseas with as much as \$50 billion in their pockets in stolen government funds during the country's economic boom over the past three decades, China's top prosecutorial office said. Using the services of criminal gangs in other countries, former officials are often able to launder money, buy real estate and

obtain fake IDs, according to an article posted on the Web site of the Supreme People's Procuratorate.

The report from the top prosecutor's office said developed nations, including the United States and Australia, have become "heaven for those in hiding."

A joint multi-agency government task force has been set up to stem the flood of corrupt officials stealing and escaping the country.

"According to statistics, China now has 4,000 officials hiding overseas with \$50 billion," the report said. It was

unclear how the numbers were calculated.

They include the Public Security, Justice and Foreign Affairs ministries joining together "to prevent the fleeing of those who violate disciplines or laws," said a notice posted on the Ministry of Supervision's Web site.

"All in all, efforts should continue to be made to catch and arrest the corrupt officials," it said, while also making their lives on the run difficult.

It did not give details on how it would apprehend the officials or get them back to China to face the law.

DEAR SIR,

I-287-003

Greetings and Halo Aloha;  
As per our discussion dated 1-11-2010,  
please examine the attached article in  
the realm of Crime syndicates both  
in Guam and the U.S. Mainland.  
The issue is clear that pol-  
itical influx have dominated and  
had its "just cause" for local resis-  
tance. This is in essence an inter-  
national problem that should be of  
concern for Washington and probability  
for inquiry/investigation. This is a very  
serious matter which may necessi-  
tate Senate (or) Congressional mandate.  
Something must be done as continuity to  
address JGPO/US interest in our National  
Security/Defense and values. AL Topasna PAGE 1

Hello

I honestly feel that if you take away the Yigo Drag strip, be expecting a lot of "illegal" street racing on Guam. The Yigo drag strip is what keeps Guam people and Military people safe when they are on the road driving to get to their destination. You take that away from the people, it will just become worse. I feel that there will be more accidents on the road due to people racing illegally also pedestrians getting hit from fast drivers or just big accidents period. My dad is in the Military and I support him 100% being in Iraq, but I feel that this would be the biggest mistake to take away from the Guam people..... its our hobby, its what we love to do, to race, it also decreases crime because people love to go to the track. Plus Guam is so small there is not much to do hear. You take the racing track away from us, there will be more crimes, more Police vehicles going off because of accidents... I totally disagree on tearing down the Yigo Drag Strip, that is a big thing hear on Guam.....

I-288-001

**I-288-001**

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

## COMMENT SHEET

I-289-001

Do not take ANY more land on Guam. The military already owns more than 25% of Guam. I oppose eminent domain and the use of ancestral lands for further military purposes. My solution: Either NO ACTION or use land you have already condemned.

I-289-002

Another solution to the firing range is the one you currently use near Tarague Beach.

#### I-289-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

#### I-289-002

Thank you for your comment. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1.

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam

Seve.

I-290-001

#### I-290-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

Hello

I honestly feel that if you take away the Yigo Drag strip, be expecting a lot of "illegal" street racing on Guam. The Yigo drag strip is what keeps Guam people and Military people safe when they are on the road driving to get to their destination. You take that away from the people, it will just become worse. I feel that there will be more accidents on the road due to people racing illegally also pedestrians getting hit from fast drivers or just big accidents period. My dad is in the Military and I support him 100% being in Iraq, but I feel that this would be the biggest mistake to take away from the Guam people..... its our hobby, its what we love to do, to race, it also decreases crime because people love to go to the track. Plus Guam is so small there is not much to do hear. You take the racing track away from us, there will be more crimes, more Police vehicles going off because of accidents... I totally disagree on tearing down the Yigo Drag Strip, that is a big thing hear on Guam.....

**I-292-001**

**I-292-001**

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners,

any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Policies Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

I have been viewing all the buildup in Guam and a lot of my people who have live there making Guam there permanent stay would resent a buildup with concern perhaps destroying the trees that have been there for a long period of time and the comfort for not destroying the nature itself is somewhat on the agenda on how this summary of not being out in the open for discussion, here in la mesa, ca where i live there is a 10 acreage of land behind my house and the la mesa residents are very against building homes that would destroy the trees that have been there for more than 30 years and for consideration they come to the conclusion that if and when they are to build these 130 homes they were not aloud to build and destroy these trees whatever you chose to do give it a consideration and not destroy nature. Also i am for buildup since i am retired from the federal gov't here in san diego, ca i see that military is what protects our nation and in doing so my Guamanian people should be appreciate and content. what i asked for the military people is learn and respect the people of the Island cause they are friendly and welcoming to outsider. Also i remember the time when the military has close partial but not all in the 80's and some of the military/civilian were sent out here and some resent the idea that they were uprooted later they regret the close down. Also it is a win win situation, We know what is best for the island and the U. S. A.'s advantage that we are there for one reason only to protect our interest from being attack closer to home. Of course we are building up in a positive way, we are not to wait longer perhaps these is a eye opener all over the world to response immediately and not wait 14 hrs flight to get there when attack does happen.

I-294-002

#### I-294-001

Thank you for your comment. Although a large number of trees would be removed, the vast majority would be trees that are in secondary growth forests and many of these are not native to Guam or are small trees that are abundant in many other areas of the island. Only a very small number of large, native trees would be removed. Other forest areas will be improved as habitat for animals through such methods as removal of pigs and deer that cause much destruction of the forest understory.

#### I-294-002

Thank you for your comment. The DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

According to the Guam Governor's website (www.one.guam.gov), "The impacts of the proposed island-wide increase in federal land are being addressed in the Land Acquisition Impact Study portion of the Socioeconomic Impact Assessment Study that is being developed and will be available as part of the final EIS."

Question: How can the people of Guam fairly comment on the Department of Defense's plans to increase its land inventory if the "Land Acquisition Impact Study" will not be available during the comment period for the public to refer in making sound judgment?

Recommendation: The public comment period must not end until the Land Acquisition Impact Study is made available to the people of Guam; and that the people of Guam are given at least 120 days to review said document. The Department of Defense plans to increase its land inventory in the Unincorporated Territory of Guam, amounting to approximately 40% of the island's landmass, thus solidifying itself as the largest landowner in an island that has no right to vote for President, Congress or Senate.

Saina Ma'ase for your time, and I look forward to a transparent and equitable response to my comments.

Sincerely,  
Simeon M. Palomo, resident of Guam

**I-296-001**

Thank you for your comment. There was sufficient information regarding land acquisition provided in the Land and Submerged Land Use section of the DEIS.

DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

I-297-001

The roadway work needs to be in place before the "BUILD-UP" not during and after. If the Government of GUAM is involved in the road work it will take fifty years to complete.

The US Government needs to build an "INTERSTATE" Highway for AAFB to the NBG like Hawaii (US1, US2 & US3) did. It needs to be built before the other construction starts not during and after when the traffic is subsiding.

Marine Corps Drive needs overpasses at Rt 4, Rt 8, Rt 14, & Rt 16, not longer turning lanes.

How can going from 160,000 to 240,000 population have a LSI on the roadways that are already gridlocked because of the only one way of going north to south? There needs to be an alternative to Marine Corps Drive in case of an accident or natural disaster.

### I-297-001

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The FEIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations. The determination of LSI is a result of comparing the additional military build-up traffic AND identified off-base roadway improvements to the No Action condition. Further improvements such as a highway and/or overpasses would have adverse impacts to the environment, require extensive right-of-way acquisition, and would be cost prohibitive.

GUAM AND CNMI MILITARY RELOCATION DRAFT EIS / OEIS

The Governor's Office encourages interested residents to provide comments on the environmental document prepared for the analysis of the proposed military buildup. Your comments, as well as those being prepared by GovGuam, will ensure that decision makers are fully aware of our concerns relative to the proposed buildup. Comment forms, or your own letter, will be accepted at the Guam workshops, the public hearings sponsored by the Joint Guam Program Office (JGPO), or may be mailed to: JGPO, c/o NAVFAC Pacific, 258 Makalapa Drive Suite 100, Pearl Harbor, HI 96860-3134, Attention: GMPO. You can also visit [www.guambuildups.us](http://www.guambuildups.us) to comment. Comments must be postmarked by February 17, 2010. Copies of the Draft EIS/OEIS are available for review at Nieves M. Flores Memorial Public Library, University of Guam Robert F. Kennedy Memorial Library, Joeten-Kiyu Public Library, Northern Marianas College Olympio T. Borja Memorial Library, and the Tinian Public Library. A DoN sponsored reading room has also been set up at Agana Shopping Center for Draft EIS/OEIS review.

Please provide your comments below:

I-298-001

According to Volume 2 page 8-61 in the DEIS, it states that "Access to property associated with either alternative would be limited to authorized personnel throughout most of the year." and furthermore, "Access to historic sites, hiking trails and beach areas would require DoD approval and would be limited to periods of no training and subject to DoD approval." Thus, I would like to ask when would access be granted? would public announcements by DoD be made annually informing Guahan citizens of such access? will we still be able to swim at these shores on the Eastern Coast of Guahan? What times of the day will this access be granted or allowed? If I build my house in Sassayan Valley since I have property down there, will I only be able to reside there when DoD says I can? I propose that the No Action Alternative be selected regarding the non-firing and firing range. Please reconsider utilizing DoD lands that already belong to the US Military for the firing range. Please collaborate with Andersen Air Force Base and Naval Station to derive a solution. I would like to pass down my family's property located in "Alternative B", to my son and eventually to his children. Furthermore, I ask that you extend the commenting period for this DEIS to allow more concerned citizens of Guahan to make educated and supported comments.

I-298-002

I-298-003

Please print clearly. Comments must be postmarked by February 17, 2010.

I-298-001

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-298-002

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-298-003

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership

determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

Your maps omit a significant residential community between the northern and central maps, roughly from the LDS church in Yigo south to the Yigo Fire Station. Portions of the PDF charts are not legible. What is being hidden in these omissions?

#### I-299-001

Thank you for your comment. The small-scale (zoomed out) figures in Chapter 8 of Volume 2 (Land and Submerged Land Use) show all areas in Guam. The large-scale maps (zoomed in) show project areas and their immediate surroundings in greater detail. Certain areas do not appear within the views of the large-scale maps, but the analysis addresses all affected areas.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 278

Received: 1/25/2010 12:56:24 AM

I-300-001

CHN Lujuna is a residential street it should not be designated a heavy equipment haul road. Existing traffic is rapidly deteriorating this street. Existing commercial traffic flagrantly violate traffic laws. The trucks using this street continually destroy the shoulders and traffic signs. The military traffic should be routed through Andersen South. There are two existing roads crossing Andersen South connecting RT 1 and Rt 15. The southern most road can be resurfaced and a minor adjustment to the Rt 1 intersection could create a four way intersection with Wusstig Rd. where appropriate traffic control signals would enhance traffic safety and keep military traffic on military property no in civilian residential streets. The rerouted Rt 15 will intersect the road currently crossing Andersen South thus making it an appropriate route to and from the firing range.

### I-300-001

Thank you for your comment. Chalan Lujuna is classified as a major collection and is proposed to be part of the haul road system to transport aggregate from the rock quarry located in Southern Guam through Route 15 to construction sites at NCTS Finegayan, Andersen Air Force Base and Andersen South. As part of the proposed action, Andersen South would be the location of proposed training facilities such as vertical lift landing zones, live-fire training areas, non-fire maneuver training areas, non-firing ranges and others, and is not under consideration for the haul road network.

I-301-001

What compensation is to be offered to those residents within the noise pattern of the firing range? The incessant noise from this range even if it is below 85 dba is a serious environmental and quality of life issue for everyone within two miles of this range Especially children students at near by schools and the people living and sleeping in their homes during day time hours. Who is going to bear the expense for those forced to move from their homes due to the noise? What do residents in the noise impact areas get for loosing property value when they can not sell or lease their property due to the noise.

I-301-002

Why not locate the range on existing military property at Northwest Field in conjunction with the Air Force Warrior Training Facility. The location would not require taking private land or make existing housing areas uninhabitable. It would eliminate or reduce off Base traffic, the shipment of munitions on public streets and increase safety and security for the range.

I-301-003

Why is the government negotiating land purchases even prior the public hearing and without due consideration of the people of the communities affected?

#### I-301-001

Thank you for your comment. The EIS does not identify schools that would be adversely impacted by the training range noise. Acoustic walls are proposed as noise abatement at the ranges. Impacts to surrounding uses are described as less than significant with the acoustic walls. No mitigation is proposed outside of the federally-controlled property. No relocation of residences is proposed.

Outside of the EIS process, there is funding through the Office of Economic Adjustment to conduct a study that identifies potential encroachment issues, such as noise, associated with the proposed actions. Mitigation strategies will be developed.

#### I-301-002

Thank you for your comment. Locating Marine Corps training ranges on Northwest Field was one of the options examined during the EIS process. This option was not carried forth in the EIS because the area of useable land, air, and sea space was not found to be sufficient to meet the requirements for the firing ranges and their associated safety buffers. Existing Air Force facilities, safety zones around ammunition storage areas, and protected habitat significantly reduced the land at Northwest Field available for consideration.

#### I-301-003

Thank you for your comment. DoD did not initiate negotiations prior to the public hearings. However, discussions with potentially-affected landowners have taken place.

I-303-001

The local mentality is such that almost everyone, views the US Government as an unending source of revenue. Therefore this "entitlement" mentality has developed over the years. As this applies to the buildup, it is that Gov Guam is expected to provide certain improvements to the infrastructure according to the DEIS. This entitlement mentality is now surfacing, in that the local population are thinking that the military should provide ALL of the improvements and Gov Guam little or nothing, since the build up is for the benefit of the military. They either cannot or will not comprehend that the infrastructure improvements will benefit them the most. Further, as far in debt the local government is, they no longer have the borrowing power to provide the needed infrastructure that is going to be required, nor the income to repay the debt if they could find a funding source.

Your biggest obstacle to overcome is going to be this entitlement mind set that the local populace have developed, and feel that the military/US government owes to them.

My main point is that the Marines are going to have to overcome this mind set for things to run smoothly. Secondly, assist the local government in funding the required infrastructure, plus provide oversight to development of said infrastructure.

**I-303-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The Feb. 17 deadline is sufficient; no need for further extension.  
Would like the buildup process to start soon as possible. As Pres. Obama said, we need to provide jobs to get our nation out of this recession. Additional military presence, in the form of over 8,000 U.S. Marines and dependents is the answer. As one JGPO official said, employment opportunities will be created; these are not jobs that will just go away, but will remain on island.  
As for cultural sites, there are provisions to protect and preserve island landmarks. As for acquiring additional land from private landowners, that is between the owner and the military to negotiate to satisfy both parties. We also have full faith in the U.S. Govt that they will provide whatever is necessary to improve the quality of life for the people of Guam, both military and the local community. Signs of improvement are already happening in the form of road improvements and VA Clinic. In closing, Gen. Bice and the entire EIS staff have done a wonderful job in putting the report together. It may not satisfy everyone, but it does provide mitigation steps to minimize environmental concerns.  
Recommendation: Implement

**I-305-001**

**I-305-002**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

**I-305-003**

Thank you for your comment.

**I-305-004**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is

necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

Due to the increasing opposition to military bases in Okinawa, it has become more urgent to accelerate movement of U.S. Marines to Guam. For the past three years, much planning and resources have been allocated to facilitate this relocation. The DEIS is a good document that addresses nearly all environmental concerns. There exists vacant federal property that does offer most if not all the requirements for this relocation. Guam is the most ideal location, considering its proximity to the hotspots in Asia. In light of the unstable country of N.Korea, it is imperative that this move materialize to ensure national security in this Pacific region. And if private lands are to be acquired, that good faith negotiations are part of the process to benefit both parties. Most of all, as U.S. citizens here in Guam, we stand ready to assist in this relocation. With anticipated financial assistance into the Guam community, the quality of life will vastly improved in form of infrastructure, schools, education, etc.  
Recommendation: Urgent Implementatin Now!  
Good job, Gen. Bice and EIS staff!

Even as a teenager, I can understand what the military buildup will do to our island. As a matter of fact, the military buildup will affect our island's youth as much as how it is affecting our families right now. I believe that the military buildup will alter our island of Guam so much that we will lose all cultural history and cultural value. The military will bring some benefits but more so of a negative impact. The crime will increase, the beauty of our island will deplete, and the military will take our land regardless of what we have to say. Why is it that if the military is taking so much of what is ours, they are only giving us an insufficient amount of time to read the draft, and so little time to hear our opinions about it. How is the military going to compensate our land to an equivalent of what is with land that is not even theirs. The streets of our island will not be safe with the thousands of marines strolling the sidewalks, and I will not feel safe in my own home. The tolls of deaths by DUIs and victims of rape will increase immensely. Guam has been my home for my whole life. I do not want the military to ruin my home.

**I-311-001**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see FEIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the FEIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-311-002**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime

rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-311-003**

Keep up the good work, JGPO. The majority of Guam supports the buildup. As Obama said, we need to provide jobs to get this nation out of this terrible recession. Currently, the unemployment rate on Guam exceeds 10%. So, to keep in line with Obama's call to jumpstart the economy, Guam can set an example of how the military and local community can work in harmony and partnership.

Congresswoman Bordallo, Interior Deputy Babauta, Gov. Camacho, H. Clinton, and DOD Sec. Gates all support this relocation. The DEIS is a good document in its current form, complete with mitigations. Strongly recommend: ACTION

I-312-002

By the way, please no more extensions: We can no longer delay national security interests in this region.

#### I-312-001

TOPIC: Public Comment Period.

Comment: The NEPA requires that the DEIS provide an accurate analysis of the potential effects of the proposed actions. This requirement inherently requires that the DEIS document contain sufficient supporting information and research to formulate an accurate understanding of the proposed action (to include references where cited); or there is sufficient time for stakeholders and decision-makers to conduct independent external research to assess the validity of the DEIS conclusions. This voluminous document contains numerous unsupported and/or illogical conclusions which require independent research in order to formulate an informed opinion and to provide meaningful feedback or understanding for basis of a decision. The 45day/90day public comment periods do not provide sufficient time to for the public to conduct such a review.

Request for more information: Please clarify the process and justification for establishing a 45-day/90-day public comment period for this DEIS relative to NEPA requirements. Unsupported or illogical statements of "no impact" and "significant impact - mitigatable" necessitate independent research on behalf of the decision makers and public, and warrants a longer public review period.

Recommendation: Increase the time for public review and commentary to no less than 247.5 days. This is warranted since this DEIS is roughly 5.5-times the size of an average DEIS, and the average public review/comment period is 45-days.  $45 \times 5.5 = 247.5$ .

### I-313-001

I-314-001

I am against the military trying to lease or takeover property from local residents in Pagat, Mangilao so they can use it as a firing range. I was in Alasad, Iraq for 3 years and I saw how the marines did their firing qualifications. All the Marines fired at was in a rock quarry, they posted up targets and fired, M-16, 9mm, etc.. As for the firing 50 cal. rounds it was just further down the rock quarry. Why can't the military do the same thing in either Tarague, Andersen or any other military installations. Build a rock quarry or make one, and leave the local property alone that was given to our ancestors. Thank you

#### I-314-001

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-316-001

The 90-day comment period allowed for this report is INSUFFICIENT given the magnitude of the proposed activities and the immense scale of the DEIS document. Typical DEIS reports are 150-300 pages, and this report is 11,000 pages. If a typical DEIS review procedure allows 45 days for review, then the people of Guam should be given AT MINIMUM 1,650 days (4.5 years) to review this document. To allow only 90 days indicates an assumption on the part of the submitting party that a full and complete review is not necessary, and makes a mockery of the entire EIS review process.

#### I-316-001

**I-319-001**

Proposed activities for Tinian once the training ranges are built are for 200-400 Marines to fly from Andersen AFB to West Tinian airport, then bused from West Tinian to the training sites. Although I foresee possible instances of surface transportation (By sea) due to the fact of unavailability of air transportation or volume of Marines needing to get to Tinian expeditiously, it would be best for the military to upgrade, repair the roads leading from West Tinian airport to north field allowing for 2 way traffic and avoid accidents. I also would suggest that the military upgrade, repair the roads from the harbor to north field for the same reasons in addition to repairing the harbor for future expansion of training requirements.

**I-319-002**

Training schedules for Marines in Tinian should also be adjusted so they can at least spend a day or two on the island for site seeing, eating at local establishments, try their luck at the lone casino, diving and just spending their time in town to assist in the local economy or community projects the military is good at when visiting other locations.

**I-319-003**

I was fortunately present during the public hearing held at the Tinian Elementary School cafeteria, I had the opportunity to meet an old friend Marine MAJ.Frank Diaz and good discussion with COL. Loynd. I thought the presentations were good but more public hearings should be provided as new information are updated. I look forward for this proposal to materialize because the people of Tinian have been expecting something to happen on their island since 2/3 of the island is leased by the military already.

#### **I-319-001**

Thank you for your response. The EIS has assessed the road infrastructure on Tinian and found it to be adequate to support proposed training. The proposed action entails Marines moving by foot or by bus from the airport to the training area. The existing roads will be closely monitored for signs of wear and routine maintenance will be carried out to ensure they remain capable of meeting Department of Defense and civilian requirements.

#### **I-319-002**

Thank you for your comment. As identified in Chapter 1 of Volume 3 of this EIS, the Marines would deploy to Tinian for required training and return to Guam upon completion of training.

#### **I-319-003**

Thank you for your comment. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. The DoD also continues to meet with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans. The DoD has kept the public informed by holding public scoping meetings and public hearings and encouraging the public to comment on the DEIS. Almost 2,000 people combined attended the six public hearings on Guam, Tinian and Saipan. At this time, DoD does not plan to hold any additional public hearings.

Why Guam Why does it have to be us? They are just making us a much larger target for the US enemies to fire at.

What are we going to do the the houses when they leave?  
Just send them back to the US! We already have enough troops here on the island. Dont damage our island more. You are going to tear down the things we care about. Tear down your property instead of ours.  
You dont own our island

### I-320-001

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

## COMMENT SHEET

I-321-001

By placing the housing for 18,000 male laborers in one concentrated area in the Harmon Annex, and then turning it into low-cost housing after the buildup, the increase in crime will be maximized. What is currently planned is the creation of a permanent ghetto. This is not acceptable. A low-income concentration of population has been proven by anthropological studies to lead to greater crime. This is why many communities make a point to integrate all levels of socioeconomic status when planning their housing. One of the best examples of this kind of integration of income levels is a housing development in Santa Cruz, California, called The Tannery. Please study its success.

In order to mitigate the crime that will rise due to the sudden concentration of laborers in the Harmon Annex, I recommend that the military take a cue from other communities, such as Santa Cruz, who have put care and thought into their city planning to ensure it will be a positive development for the community. For example, the comfort level of the laborer housing should be increased so as to attract an upper and middle class clientele both during the buildup and after. Rich and poor living side by side in decent living conditions will enable our community to develop in a positive direction. There should be a sliding scale of payment based on income. Guam should not be turned into a slum for the convenience of providing labor for the base.

Because this mitigation will require that the 18,000 units go to people of diverse backgrounds other than laborers, any extra laborers who cannot fit in the development can be placed, at the military's expense, in the many new apartment complexes that are being planned and built in anticipation of the buildup. Many are being built by the company Tanota Partners, as an example.

In short, MITIGATE CRIME INCREASE BY PROVIDING HOUSING THAT INTEGRATES SOCIO-ECONOMIC LEVELS, RATHER THAN THE CURRENT PLAN TO CREATE A PERMANENT GHETTO ON GUAM.

### I-321-001

Thank you for your comment. Workforce housing is outside the scope of the EIS, but is identified in EIS, Volume 6 Section 1.2, as a related action.

There are private development proposals to provide workforce housing to support the military build-up described in the EIS. These proposals are being reviewed by the Guam Land Use Commission. The Government of Guam controls the type and location of development and is responsible for ensuring the development is consistent with the existing and future community development plans. DoD has no decision-making authority over projects beyond the military base boundaries. The developers are likely to proceed with the construction or renovation for workforce housing before the EIS Record of Decision is signed. The Navy will issue construction contracts requiring the contractor to provide housing in accordance with specified health and safety standards. Contractors will be required to provide medical services and transportation for the workers. The Navy would not dictate the pay scale of the workers.

I-322-001

Considering the financial straits the U.S. is currently suffering, it is fiscally unwise to berth an aircraft carrier in Apra Harbor. As Senator Daniel Inouye stated in an August 27, 2006 Honolulu Advertiser article, "You have to be realistic. If you don't have the money, you can't have (a carrier in either Hawai'i or Guam)," Inouye said. He also said "in today's war, with all the high technology of communications and satellites and such, the odds of being caught unaware and unprepared is rather nil."

As an example of the costliness of building the berthing in Guam, one estimate placed the cost at \$5 billion for infrastructure and other improvements in there, and \$2.2 billion to move a flattop to Hawai'i. The cost would be less at Puget Sound, Inouye said.

I agree with Inouye's statement, and recommend berthing the aircraft carrier in Puget Sound or San Diego. Please look into it and take this comment seriously.

### I-322-001

Thank you for your comment. As addressed in Volume 4 of the EIS, the capability to have a CVN capable berth on Guam for transient aircraft carriers is required to support aircraft carriers operational requirements in the Western Pacific and Indian Oceans. The reduced transit time from Guam to these western Pacific locations is superior to those from mainland US Navy ports.

What is currently planned is the creation of a permanent ghetto. This is not acceptable. A low-income concentration of population has been proven by anthropological studies to lead to greater crime. This is why many communities make a point to integrate all levels of socioeconomic status when planning their housing. One of the best examples of this kind of integration of income levels is a housing development in Santa Cruz, California, called The Tannery. Please study its success.

In order to mitigate the crime that will rise due to the sudden concentration of laborers in the Harmon Annex, I recommend that the military take a cue from other communities, such as Santa Cruz, who have put care and thought into their city planning to ensure it will be a positive development for the community. For example, the comfort level of the laborer housing should be increased so as to attract an upper and middle class clientele both during the buildup and after. Rich and poor living side by side in decent living conditions will enable our community to develop in a positive direction. There should be a sliding scale of payment based on income. Guam should not be turned into a slum for the convenience of providing labor for the base.

Because this mitigation will require that the 18,000 units go to people of diverse backgrounds other than laborers, any extra laborers who cannot fit in the development can be placed, at the military's expense, in the many new apartment complexes that are being planned and built in anticipation of the buildup. Many are being built by the company Tanota Partners, as an example.

In short, MITIGATE CRIME INCREASE BY PROVIDING HOUSING THAT INTEGRATES SOCIO-ECONOMIC LEVELS, RATHER THAN CREATES A GHETTO SLUM IN GUAM.

I-323-001

Thank you for your comment. Workforce housing is outside the scope of the EIS, but is identified in Volume 6 Section 1.2, as a related action.

There are private development proposals to provide workforce housing to support the military build-up described in the EIS. These proposals are being reviewed by Guam Land Use Commission. The Government of Guam controls the type and location of development and is responsible for ensuring the development is consistent with existing and future community development plans. DoD has no decision-making authority over projects beyond the military base boundaries.

The developers are likely to proceed with the construction or renovation for workforce housing before the EIS Record of Decision is signed.

The Navy will issue construction contracts requiring the contractor to provide housing in accordance with specified health and safety standards. Contractors will be required to provide medical services, transportation and recreation facilities for the workers. The Navy would not dictate the pay scale of the workers.

COMMENT SHEET

Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 306

Received: 1/28/2010 8:44:57 AM

The Draft Environmental Impact Statement Section ES-4 states that:

"The main components of the proposed actions are as follows:

- 1. Marine Corps. (a) Develop and construct facilities and infrastructure to support approximately 8,600 Marines and their 9,000 dependents relocated from Okinawa (Japan) to Guam, (b) Develop and construct facilities and infrastructure to support training and operations on Guam and Tinian for the relocated Marines. 2. Navy. Construct a new deep-draft wharf with shoreside infrastructure improvements creating the capability in Apra Harbor, Guam to support a transient nuclear powered aircraft carrier. 3. Army. Develop facilities and infrastructure on Guam to support relocating approximately 600 military personnel and their 900 dependents to establish and operate an AMDTF.

I-324-001

In response to the quote above from the DEIS, it is clear that there is a lot more behind the proposed actions that affects the island of Guam. In regard to number 1, we need to know where the money will come from; specifically, not from the people of Guam in any form of tax or income deduction, that will provide the funding for the facilities and infrastructure. Also, it verifies that we will be bringing in that population of 8,600 Marines and their 9,000 dependants. Where will we get the adequate water and land supply? We will still need to give more land to the military. If so, what about the land that may be taken away from the residents and business owners of Guam? For numbers 2 and 3, our oceans will be affected, simply by tapping into them, as well as the nuclear power facility that will be installed that can destroy the marine life that we are trying to preserve. Lastly, since the military will be relocating here along with their shooting ranges and operation devices, Guam will only become more of a target for opposing world powers. Of course, they'd feel it best necessary to wipe out troops-the troops being stationed here on Guam. The protection that we will gain is equally positive and negative.

I-324-002

I-324-003

I-324-004

As a solution, we can obviously talk this over fairly, and let Guam have a say in what they feel is best for the military and locals. The decisions need to come to a compromise where both the military personnel and locals are gaining and where no one side is losing out on benefits. But of course, there should be minimal, yet equal sacrifices. If only we had the overall power to defend what is rightfully ours. A good fact to consider may be making use of the lands that the military owns, but is not using, and taking the time to move around some current facilities and firing ranges to places that can accommodate neighboring activities. Nothing should be put to waste. Things should be planned out smartly and safely. As for our natural resources, we should try not to tap into the oceans, because they are trying to be preserved. Another thing is land that is also trying to be preserved. What we could consider is hiring Guam's people to do all of the infrastructure building with the military paying our people instead of bringing in foreign workers. The majority of Guam should benefit financially from all of this, only so we can keep ourselves living comfortably. I don't think we'll want to have lower

I-324-005

I-324-007

I-324-006

I-324-001

Thank you for your comment. Funding for the proposed relocation of US Marines from Okinawa to Guam is anticipated to be cost-shared between the US Government and the Government of Japan as per an international agreement. In addition, DoD would work closely with the Government of Guam to improve infrastructure in support of the proposed relocation. Potential infrastructure improvements are identified in Volume 6 of the EIS.

I-324-002

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks. The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net

I-324-008 |

I-324-009 |

incomes than we already have. Also, why don't we put in the funding to replenish all of our current facilities inside and out, just so that we can efficiently accommodate the bigger population. From there we can expand on our resource management facilities. And to conclude, why Guam exactly?

positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-324-003**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-324-004**

Thank you for your comment.

**I-324-005**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action. It can appear that there is considerable wasted space on military bases but there are invisible land use

constraints that exist to protect public health and safety reasons. For example, there are accident potential zones around airfields and explosive safety arcs around ammunition storage areas that restrict development. In addition there are conservation and watershed areas that should not be developed. NCTS Finegayan appears to have a lot of space, but development of the Overlay Refuge is discouraged by U.S Fish and Wildlife Service. EIS Volume 2 Chapter 8 includes figures of the land use constraints at existing federally-controlled property. Volume 2 Chapter 10 figures show the natural resource constraints on land use.

**I-324-006**

Thank you for your comment. Anticipated impacts on employment are discussed in detail in Section 4.3.1 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F in Volume 9 of the EIS. Subsection 4.3.1.2, entitled Probable Labor Supply Sources, discusses the available Guam construction labor supply and the need for foreign workers for construction. The amount of jobs going to Guam residents is discussed in this subsection and states:

"Current Guam Residents: As of 2007, Guam had a total employed construction workforce of approximately 5,600 people, although only 4,600 were "production workers" and about 1,000 of these were temporary foreign workers (Guam Department of Labor, 2008)."

The Guam Contractors Association (GCA), in late 2006, established a nonprofit "Trades Academy" to train residents for employment at all levels of the construction industry. Also, the Center for Micronesian Empowerment (CME) has obtained seed funding, and is seeking additional funds, to implement a program of both social assistance and job training (Appendix D of the SIAS - CME Interview). The GCA Trades Academy would make part of its 8,000-square-foot training facility available to the CME if the program is able to move forward.

On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

**I-324-007**

Thank you for your comment. DoD appreciates your concern for potential environmental impacts on terrestrial and ocean resources. Unfortunately, the proposed action will result in environmental impacts and the EIS process serves to disclose these impacts for public review. At every step of the planning process efforts were made to identify the least environmentally damaging alternatives. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-324-008**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other

Federal programs and funding sources that could benefit the people of Guam.

**I-324-009**

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 307

Received: 1/28/2010 10:13:01 AM

I'm a sophomore at GW and I've lived on Guam all my life. I don't think I'm allowed to say that I'm against the military build up because both of my parents are for the build up, and my dad is in the Air Force. When I want to talk about the military buildup, they don't listen. As a young woman who will contribute to the future of Guam, I feel it is important to get my point across. I want to speak out and voice what I believe to be right. I don't like the idea of anyone going to someone else's home and destroying it. For example, the military plans to turn Pagat Cave into a shooting range. I have been there and it is one of the most breathtaking hikes I have ever been to. The cave itself is magnificent and the vast ocean you see when you go to the cliffline is beautiful. The challenging hike is worth the time and energy needed to get there. If they take the Pagat area, our artifacts will be turned into shooting targets! Come on, the Federal Government is so rich and the military has so many golf courses why can't they move their shooting ranges there. Can our infrastructure support eighty-thousand people? Has anyone thought of this? How many people are actually coming during the buildup? Are the estimates correct? Did they include the family members who will follow? Do we have enough schools or teachers? They are offering so many jobs but are there enough people here to fill them? If they bring people to Guam to fill these jobs, will they make more money than the locals doing the same job? Will the middle-class families on Guam today, become the low-income families on our island? How much land will they destroy to create all the homes needed for all these people? What about our environment? Are they just going to murder it? I thought President Obama was going green. Have they thought about the impact of all this deforestation? Will it cause erosion? Will they murder all our marine life? Are they going to poison our waters with chemicals, like they did with our water wells? Where is all the supplies going to come from to support everyone? Why did Japan pay millions of dollars to get rid of them? With such an increase in population, will the crime rate go up? What positives will come from all of this? Money!? Could all the money from the buildup pay for all the negative effects that will be brought to Guam? Can we find a compromise? When you think about the answers to all these questions use your heart instead of thinking fast with your mind.

I-325-001

I-325-002

I-325-003

#### I-325-001

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

#### I-325-002

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

#### I-325-003

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources,

and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Your comment pertains to many different impacts contained in each volume of the EIS. Vol 7 provides a summary of impacts for implementing the proposed actions and Best Management Practices and potential mitigation measures to minimize adverse impacts.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 309

Received: 1/28/2010 10:42:35 AM

I-326-001

I am a 9 year old girl who lives in Chalan Pago, Guam. I go to school at Santa Barbara Catholic School and one of my favorite hobbies is going to the beach and swimming. I am just learning how to snorkel and I like seeing many kinds of fish. I have gone on dolphin watch trips with my family and seeing the dolphins is one of the best times of my life.

I went to one of the military build up meetings and heard that the the military is going to destroy part of the reef and the home of the sea turtle and the spinner dolphin. I don't want you to do this because I love dolphins and turtles and want them to be here for when I have my own kids.

Please do not hurt Guam's reef because it is an important part of our island. If you destroy the reef, you will be destroying the coral. And also, if a tsunami comes to Guam, the whole island will be hurt because the reef won't be able to protect us.

I think you should use what is already available and if your ships are too big, then they should go to some other place, not Guam.

I-326-001

Thank you for your comment and information provided. I assume the comment is referring to Outer Apra Harbor, as there are no submarine or scuba tours conducted within the Inner Apra Harbor to my knowledge. The Navy is monitoring dredging activity at Kilo Wharf and is aware of issues their subcontractor has had managing the silt curtain mitigation measure. The height and some operational changes have been made to correct this issue. It should be noted that the in-water conditions at Kilo Wharf are significantly different from the proposed dredge area (i.e. Kilo Wharf has increased wave action and currents associated with the site). The dredging plume models that were run for the EIS, were based on high silt curtain sediment retention of 90% observed at another location in Apra Harbor that would have similar conditions to the proposed action.

G-326-001 Thank you for your comment and concern for protected sea turtles, dolphins and their habitat. The proposed action within Apra Harbor (an active commercial and DoD port) has been evaluated in the DEIS and will not significantly impact federally protected sea turtles or dolphins (or their home) with implementation of mitigation measures. The Navy currently implements standard operation procedures, mitigation measures and best management practices (BMPs) that consider federally protected species and their well-being. The Navy has also co-existed with sea turtles and dolphins in the Harbor and around Guam for over 60-years. The Navy, in partnership with the U.S. Fish and Wildlife Service (USFWS) and Guam Department of Aquatic and Wildlife Resources (DAWR), monitors sea turtle activities within Apra Harbor and around Guam. There are no records of sea turtles nesting on beaches within Apra Harbor that would potentially be impacted by the proposed action and there have been no reported observations of sea turtles grazing within the area to be dredged. The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction) to lessen any potential impacts to sea turtles and marine life in general. Additionally, the Army Corps permit will require measures to

protect biological resources. These measures may include but are not limited to the following: biological monitors on vessels (making sure sea turtles and dolphins [although rare in Apra Harbor] do not approach the area); halting of dredging activities, if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area; low lighting; and as described above, joint Navy/USFWS/DAWR monitoring of nesting beaches though out Guam. Yes, significant unavoidable impacts will be seen to coral reef, other immobile invertebrates, and some site-attached reef fish as identified in the DEIS. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing short-term and localized impacts. To lessen impacts, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months. Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation

rule, permit applicants are required to mitigate to no net loss of ecological services and function.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 310

Received: 1/28/2010 11:24:03 AM

I-327-001

I am a 9 year old and I go to school at Santa Barbara Catholic School. I am writing this comment because I don't want the military to take the land near Mt. Lamlam and the other mountain that has the crosses on top of it. I don't want them to take the land because I hike to there and I like this hike a lot. When I grow up, I want my kids to be able to hike there too.

The land around Mt. Lamlam is very beautiful and IT SHOULD NOT BE USED AS A SHOOTING RANGE. Especially a shooting range! That's a terrible thing to do on sacred, holy ground and I know this because I go to a Catholic school.

Instead of using that land, why don't you use the land that you already have, especially your 2 golf courses. The military should play golf with the rest of Guam, not on their own golf courses.

Also, why does the military have their own land and houses, instead of living with the rest of Guam's people and sharing the land with everyone?

I recommend that the military stop their plan to use Mt. Lamlam and the mountain next to it.

### I-327-001

Thank you for your comment. Since publication of the DEIS, DoD has determined that there is no requirement to pave the access trail on Mt. LamLam. In addition, DoD does not plan to use this location for a firing range. DoD understands and recognizes the significance of access to cultural sites located on DoD property in Guam. Restricting access to certain areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to Mt. Jumullong Manglo (including the Mt. Lam Lam trail) consistent with safety and operational requirements. Final plans concerning access to Mt. Jumullong Manglo (as accessed by the Mt. Lam Lam trail) have not been developed, DoD looks forward to working with stakeholders including groups that use the area for traditional religious activities to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of this site.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 312

Received: 1/28/2010 11:41:03 AM

**I-328-001**

My name is Marijana and I am a 9 year old girl living in Guam. I am writing because I am worried about power and water outages. If the military comes and brings so many people, and they don't pay much taxes to Guam, they'll use up our power and water and we will end up having water shortages and power outages. I don't like power outages, especially when it's dark.

**I-328-002**

Yesterday, I went to the Youth Summit and learned about the Northern Guam Lens. I learned that it is Guam's aquifer and it's where we get our fresh water source. If the military uses it up, then we will have salty water or we might have to import water, which will cost a lot of money.

**I-328-003**

I recommend that the military build their own power plant and ship in their own water from the states, since they have their own ships to bring in water. On Guam, it seems that the military has their own everything, so shouldn't they have their own water, and not use Guam's water. Guam's water should be saved for Guam's people, not the military people.

**I-328-001**

Thank you for your comment. First let's address power. Yes, the additional DoD presence along with construction workforce and increased civilian population will add to the demand for power from Guam Power Authority (GPA). DoD would pay its share for reconditioning of existing power generation facilities required to support the entire increased power demand through a revised and updated customer service agreement. Increased usage of existing power generators owned by GPA would occur and the rates in the new agreement will reflect the cost of the reconditioning and operating these units. In addition, transmission and distribution (power lines, transformers, etc.) would be upgraded to handle the increased demand and that cost would also be covered by the new customer service agreement. Some of the upgraded power lines will be moved underground to improve reliability. There may be existing distribution problems within the current GPA system that are causing reliability problems (power outages). DoD cannot legally pay to fix current problems, but the increased number of customers should increase the revenue to GPA and enable them to have the necessary resources to address these current problems quicker.

Next let's discuss water. DoD proposes to withdraw additional water from the aquifer, as does Guam Waterworks Authority (GWA). The amount projected for withdrawal is within the aquifer capacity provided the withdrawal rate is properly managed among all of the extraction wells. DoD is proposing to establish a joint aquifer management team to ensure this happens, to the benefit of the entire island. This team would also utilize local experts, such as the Water and Environmental Research Institute (WERI) of the University of Guam. DoD operates their own water system independent of GWA. The GWA system currently has quality and reliability issues, and GWA is under what is called a stipulated order from EPA to correct these deficiencies. These current deficiencies are what is causing water supply

problems in the current system. DoD would plan to expand their water capacity quickly so excess water could be offered to GWA in the near term so GWA would have more time to repair and expand their system to meet the proposed increase in demand.

**I-328-002**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks

The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this

strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-328-003**

Thank you for your comment. Regarding power, DoD has been in discussions with Guam Power Authority (GPA) in working out the proposed solutions. GPA actually prefers to provide DoD power as this broadens the customer base, improves the economics, and makes it more economical to improve the system reliability. The option of constructing a DoD only power plant for the Marines was considered and discarded due to economics (it would be a lot more expensive) and the desires of GPA.

Regarding water, shipping in the amount of water needed for DoD is not economically viable. De-salination plants would be another option and this is retained as a potential long-term alternative in the EIS. Desalination is very expensive. DoD in concert with Guam Waterworks Authority (GWA) can better address the challenges of providing safe, reliable drinking water to the island than by both going their separate ways. DoD has committed to support a 3 year aquifer study by the US Geological Service (USGS) to assist in aquifer management. The Water and Environmental Research Institute (WERI) of the University of Guam has recently provided a report validating the assumptions used in a 1991 study on the sustainable yield of the northern Guam lens aquifer, which puts the sustainable yield at approximately 80 million gallons per day. The maximum estimated average withdrawal rate from the aquifer during the peak year of 2014 is about 63 million gallons per day. That estimate also includes the current unaccounted for water in the GWA system in excess of 50%. GWA is working to reduce that high rate of unaccounted for water, which could go a long way to meet future needs without system expansion. The issue of water rights is part of the comment.

These are complex legal and historical issues which are beyond the scope of the EIS, and thus are not addressed within the EIS document.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 313

Received: 1/28/2010 12:24:10 PM

I-329-001

It is regrettable that no public information sessions are scheduled in the continental U.S. Is this being considered?

I-329-002

Also, in reading the EIS, and in reading the literature regarding power outages on the island, it seems that the option of creating a Smart Grid for the island has been neglected. Smart Grid technology would produce reliability and energy security and would allow for eventual incorporation of renewable energy sources. Has a Smart Grid option been thoroughly investigated?

#### I-329-001

Thank you for your comment. DoD considered holding public hearings on the continental U.S. but decided to focus outreach efforts in and near the location of the proposed action. A project website was created in part to provide public outreach to interested individuals who were unable to attend the public hearings.

#### I-329-002

Thank you for your comment. The electrical grid in Guam is controlled and managed by the Guam Power Authority (GPA). The facilities are intended to be designed to LEED Silver requirements and meet industry benchmarks for energy efficiency. The inside the fence distribution will meet current DoD design requirements.

Nevertheless, DoD does support any efforts that are made in the future to move Guam towards more renewable resources for energy. DoD would be willing to partner with the Guam Power Authority, the Guam EPA and other environmental and energy agencies in efforts to introduce renewable energy sources on the Guam island-wide power grid. The EIS does identify both geothermal energy and Ocean Thermal Energy Conversion as the most promising renewable energy options for Guam.

I-330-001

A positive outcome for the buildup is the increase in the number of military medical personnel. At this time, as in many places, Guam does not have adequate med. staff in local clinics and in the only civilian hospital. I am sure we can arrange to allow military medical personnel and/or qualified dependents to work in the medical community. This personnel resource would certainly alleviate and assist the medical needs of the Guam community.

I-330-001

Thank you for your comment.

I-331-001

An increase in population, to certain medical professions, is good. For example, cardiologists, thoracic surgeons, urologists, or oncologists. If I am not mistaken, these professions and others take population as a criteria in setting up their practices. With this buildup and its associated population boost, it is very likely that these hard to find specialists will establish their practices on a permanent basis on Guam. As of now, it is a financial challenge to send patients to the mainland or the Phillipines for specialized treatment.

I-331-001

Thank you for your comment.

## COMMENT SHEET

As there is a requirement to increase renewable electricity use 1.5% per year for a total of 25% of consumption from renewable sources by 2025 with 50% of the required renewable energy coming from new renewable sources that were acquired after January 1, 1999 –why is there no discussion of creating a Smart Grid environment to support the Okinawa to Guam relocation?

Smart Grid would support interim existing power generation sources and would support subsequent renewable energy sources, would contribute to the reliability and security of the energy distribution for the military.

I-332-001

#### I-332-001

Thank you for your comment. Smart grid technology provides tools for monitoring and controlling the grid but does not specifically govern the use of alternative/renewable energy sources. DoD the facilities will be designed to LEED Silver with the associated energy efficiency benefits that approach offers.

Nevertheless, DoD does support any efforts that are made in the future to move Guam towards more renewable resources for energy. DoD would be willing to partner with the Guam Power Authority, the Guam EPA and other environmental and energy agencies in efforts to introduce renewable energy sources on the Guam island-wide power grid. The EIS does identify both geothermal energy and Ocean Thermal Energy Conversion as the most promising renewable energy options for Guam.

RE: Volume 4, Figure 11.1-1

I-333-001

This figure shows the proposed action will directly interfere with the migratory/breeding path of "Sea Turtle" (meaning the Green Sea Turtle and likely the Hawksbill Turtle). Both species are endangered and therefore protected under the Federal Endangered Species Act of 1973. The proposed action will have a significant impact on the reproductive patterns of these species in direct violation of the Federal Government's obligation to protect and conserve these species. Disruption of the reproductive patterns will have a profound and irreversible impact on the local population of these protected species and should be avoided at all costs.

Based on the irreversible negative impact on these protected species, the actions proposed in Volume 4 must be rated "Environmentally Unsatisfactory". Based on the insufficient analysis provided in this section, the DEIS must be rated "Inadequate". Therefore, I recommend the "No Action" alternative.

I-333-002

Additionally, it is disappointing to see a proposition, in this day and age, that has blatant disregard for environment factors. Should bolstering our already strong military foothold be our focus or should protecting the environment that provides life for all of humankind be our focus?

I appreciate your time and hope that the decision to cancel, or at least refine, this proposition is made.

Matthew

### I-333-001

Thank you for your comment and concern for the federally protected sea turtles. Under Section 7 of the Endangered Species Act, DoD is currently consulting with the US Fish and Wildlife Service and National Marine Fisheries Service on potential impacts to sea turtles. The proposed action within Apra Harbor (an active commercial and DoD port) would not significantly impact the federally protected green or hawksbill sea turtles with implementation of Best Management Practices (BMPs)/mitigation measures. The Navy currently implements standard operation procedures, mitigation measures and BMPs that consider federally protected species and their well-being. The Navy has co-existed with sea turtles in the Harbor for over 60-years. The Navy, in partnership with the USFWS and Guam Department of Aquatic and Wildlife Resources (DAWR), monitors sea turtle activities within Apra Harbor and around Guam. There are no records of sea turtles nesting on beaches within Apra Harbor that would potentially be impacted by the proposed action and there have been no reported observations of sea turtles grazing within the area to be dredged. Volume 4, Figure 11.1-1 does not show the proposed action affecting breeding and/or migratory patterns. As shown on Figure 11.1-18 and described in the DEIS, Section 11.1.4, there are only three active nesting areas in Apra Harbor, which are over 3,000 m away from the proposed activities. The closest historic nesting site (has not seen activity since anecdotal reports in 1997) is Sumay Cove, which is approximately 150 m away (for Alternative 2) and 300 m (for Alternative 1) from the proposed activities. There are no sea turtle migration patterns in Apra Harbor and forage areas are not limited to Sasa Bay. The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction) to lessen any potential impacts to sea turtles and marine life in general. Additionally, the Army Corps permit will require measures to protect biological resources. These measures may include but are not limited to the following: biological monitors on vessels (making sure sea

turtles and dolphins [although rare in Apra Harbor] do not approach the area); halting of dredging activities, if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area; low lighting; and as described above, joint Navy/USFWS/DAWR monitoring of nesting beaches though out Guam.

**I-333-002**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 322

Received: 1/29/2010 5:05:09 AM

Concerns and Suggestions:

**I-334-001**

**WATER** - 8 new water wells will eventually deplete fresh water from the North lens, and perhaps cause sinkholes as the water table goes down.

The federal government can donate 2 or more desalinating plants to the people of Guam, using solar energy to run them.

A sewer treatment plant can recycle sewer water.

**I-334-002**

**POWER** - Subsidize solar and wind power for businesses and homes. Encourage building of or conversion to energy-efficient homes and businesses.

**I-334-003**

**PETROLEUM PRODUCTS, pollution** - Encourage walking and use of bicycles. Have regular bus routes, and use non-polluting electric or solar-powered buses. Less stop and go traffic, more coordinated traffic signals, a "through-way" for those going long distances.

**I-334-004**

**TRASH** - recycle! Ship the trash to the radioactive islands where atomic bombs were tested in the past?

**I-334-005**

**PLEASE** preserve cultural and historical sites! Preserve nature, beaches and corals. Declare certain areas untouchable to development, akin to the National Parks and Preserves.

Guam people are patriots, and consider themselves Americans. Many have fought and died for this nation. Some do not want any military build-up, but many see the need for it, as the world around them changes and threats abound.

**I-334-001**

Thank you for your comment. The proposed increase in the number of water wells and the water extraction rate would be less than the estimated sustainable yield of the aquifer. Thus the "water table" would not go down as the aquifer would be replenished at a rate adequate to sustain such withdrawal. The assumptions used in the 1991 sustainable yield study were confirmed by a recent report prepared by the Water and Environmental Research Institute (WERI) of the University of Guam. Formation of additional sinkholes would not be expected to increase with additional water extraction.

Desalination has been retained as a potential long-term alternative within the EIS should implementation of a long-term alternative become a necessity. While viable from a technical standpoint, current desalination technology is very energy intensive. Solar energy would not be an economically viable power alternative for large scale desalination. Plus the land area that would be required to supply solar power for desalination would have other negative impacts on Guam.

Recycling wastewater for reuse was considered among the early options but not retained due to various reasons. Among those reasons were 1) public acceptance, 2) high cost of advanced wastewater treatment to prepare water for reuse, 3) limited areas requiring irrigation where such "gray" water could be used with public acceptance.

**I-334-002**

Thank you for your comment. DoD would utilize energy conservation techniques for new facilities. For civilian facilities, DoD would be an advocate for grants and low cost loans that Gov Guam could use for alternative energy subsidies. DoD cannot legally directly fund those efforts as they do not provide for DoD needs. Energy cost savings should already be a substantial incentive for installation of enhance

insulation, use of energy saving lights, reduction in the use of hot water, and other conservation techniques.

**I-334-003**

Thank you for your comment. The 2030 Guam Transportation Plan outlines recommendations for an improved mass transit system on Guam in effort to improve reliability and bus usage on Guam. Other measures such as signal coordination to improve traffic flow are currently being pursued to maximize use of existing system.

**I-334-004**

Thank you for your comment. The new Layon Landfill is designed to accommodate municipal solid waste from all current and future DoD sources as well as civilian and commercial sources. Based on conservative waste generation rates, the new landfill will reach capacity in approximately 33 years. The DoD will be implementing diversion and recycling programs that will significantly reduce solid waste generation and will help to extend the life of the landfill. Details of these programs have been added to Volume 6, Chapter 2.

The Navy is preparing a Recycling and Solid Waste Diversion Study for DoD Bases, Guam that has established a diversion goal of 50 percent, not including construction and demolition debris. The Study is considering the following alternatives: 1) DoD would construct two refuse transfer facilities, one in northern Guam and one in Southern Guam; 2) DoD would implement a source separation recycling program at all facilities; 3) DoD would construct recycling center(s); and 4) DoD would construct a materials resource recovery facility.

Additionally, the Navy is preparing a Construction and Demolition (C&D) Debris Reuse and Diversion Study for DOD Bases, Guam that addresses waste characterization, processing, recycling and disposal of construction debris. Information from this study will be used to update

the FEIS.

The study is considering the following alternatives: 1) Contractors would continue to process all C&D debris, and DoD would construct a composting facility to process green waste and 2) DoD would construct a C&D debris central processing facility and a composting facility to process green waste.

Through project specific contractual requirements, DoD contractors would be required to process and divert 50% of C&D debris that is generated on each project. Another alternative would be for the DoD to construct a central processing facility that would be used to recover and reuse or recycle scrap metal, concrete (without lead-based paint), asphalt concrete, and untreated wood. Contractors would be required to haul C&D to this facility. Based on the C&D debris composition assumed in the study, the Navy will be able to achieve a C&D debris waste diversion goal of greater than 50% by the end of fiscal year 2015. A site for the central processing facility is currently being evaluated but will most likely be located in northern Guam. Disposal of C&D debris that is not divertible or recyclable will be disposed at the Navy Hardfill at Apra Harbor. The study also evaluates the construction of a composting facility to handle green waste generated by land clearing activities required for new development.

**I-334-005**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with stakeholder to continue our efforts to avoid, minimize, and/or mitigate adverse effects to cultural resources. Significant historic properties such as Haputo, Pagat, and Latte Stone Park will be preserved.

I-335-003

Hello I am a student from F.B.Leon Guerrero Middle School and I am also in wave club.Our wave club went on a fieldtrip on Thursday(January 28, 2010) to the Harvest Life Center.I honestly learned a lot.We discussed about the Guam Military Buildup and I am against it 110%.The military in my opinion just think of themselves.Guam is just a little island and these so called 'military marines' just come and just say,"Hey we're taking over your island."That's not right, even though you can just atleast understand that us people from Guam are human beings too.You AMERICANS say you're fighting for our country but at the same time you're just using our small island as a place where you can kick back and relax and leave us islanders your trash.We were here first and I don't care if you own us.We still have a voice to say what we feel.And I think I speak for those who don't have the guts to say what they feel about this buildup.Guam's money comes majority from tourism,and if the buildup happens I doubt that we'll have any tourism left.Okinawa,Japan,had a huge number of crimes and especially in rape.And that all started when you invaded Japan.Now you think just because you have the money and the weapons means you can come invade Guam.We're people too that have a huge number of voices that needs to be heard.What are the benefits when you marines come?That we're just your target?All these professors say think about the positive. WHAT POSITIVE IS THERE IN THIS BUILDUP ? What happens about the negative ? When this all happens ? We won't be safe .When you come here;well here are the facts that I learned at the fieldtrip.You will increase the number of the population.You will pollute our beautiful beaches and our fresh air.You will also put our young children in danger.You will make the crime rates increase plus A LOT MORE. ALL you AMERICANS just think of yourselves.Think about the other people you're hurting.I know that I'm just a 13 year old student but still even this little comment I am writing to you will make a big difference. Trust. I have a voice and it will always overcome your filthy money and weapons. UNDERSTAND WHAT YOU ARE ALL DOING TO OUR BEAUTIFUL ISLAND !

I-335-001

I-335-002

I-335-004

### I-335-001

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

### I-335-002

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in

incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-335-003**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-335-004**

Thank you for your comment. Please see response to I-335-003.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 325

Received: 1/29/2010 11:51:17 AM

I-336-002

I-336-001

I'm all for the military build up on Guam. I believe the majority of people on the island favor the transfer of marines on Guam, but are not vocal about it in public.

My only concern is the traffic congestion on marine drive corps. Perhaps one way to lessen congestion is to build an overpass from north to south on marine drive, say from ysengsong road to anigua. Similar to a freeway in the states.

#### I-336-001

Thank you for your comment. Overall traffic congestion and resulting travel times would increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up would also add traffic and increase congestion. The FEIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

#### I-336-002

Thank you for your comment.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 329

Received: 1/30/2010 2:36:30 AM

I-337-001

I am concerned about the effect of the projects planned for the Apra Harbor, other areas that will impact the marine ecology of Guam. Projects that will result in the loss of coral reefs or will damage coral reefs should have reciprocal projects that will create new reefs or coral growth. For example – Apra Harbor will be dredge and some dive sites will be lost due to access or from the death of coral. As part of the reciprocal project, the military and the local government and interested stakeholders should create new reefs or work on improving the reefs in other parts of the Guam waters.

#### I-337-001

Thank you for your comment. As identified in the EIS, the proposed dredged area within the active commercial and DoD harbor was previously dredge over 60-years ago and maintenance dredging continues. Significant unavoidable impacts will be seen to coral reef, other immobile invertebrates, and some site-attached reef fish from the proposed action. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing only short-term and localized effects. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) will not be impacted by direct dredging activity. Furthermore, indirect (sedimentation) effects, will also not impact these areas based on computer tide/current modeling within Apra Harbor.

To lessen potential effects, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains to catch a high percentage of the resuspended sediment, biological monitors, and halting of dredging activities during potential coral spawning months. Short-term and localized impacts during in-water construction activities are expected to dive operations.

Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation

is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7. Compensatory mitigation for unavoidable coral community impacts includes the following options:

Option 1: Artificial Reefs within Apra Harbor or Other Locations; Option 2: Watershed Restoration and Management (Aforestation, Apra Harbor and/or Philippine Sea Riparian Enhancement, Stream bank stabilization component [all project goals to reduce sediment discharge into nearshore waters]) Option 3: Coastal Water Resource Management (Shallow Water Reef Enhancement); and Option 4: In-Lieu Fee or Mitigation Banking Program. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the coral reef ecosystem and the people of Guam.

Will this Guambuildup have any special offers besides money? Will there be an increase of all merchandises? What will happen in the future if this happens?

#### I-338-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 331

Received: 1/30/2010 5:55:29 AM

I-339-002

What is the purpose of this whole entire build up?  
why do they have to build another port? why can't they  
use the one we have now?

I-339-001

When the soldiers come, why is it gonna be hard for  
us to get a job?  
What if the people on Guam gets out numbered?

#### I-339-001

Thank you for your comment. There will be jobs available to the current Guam population due to the buildup. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

The anticipated civilian labor force demand was discussed in detail in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F in Volume 9. Subsection 4.3.1.1 entitled Civilian Labor Force Demand discusses the available Guam construction labor supply and need for foreign workers for construction.

The SIAS estimated the amount of qualified Guam construction workers that would likely fill these construction jobs. Because of the limited supply of Guam construction workers, the on-island workers were determined to be relatively small during the construction years.

#### I-339-002

Thank you for your comment. The overall purpose and need for the proposed actions are described in ES-2 of the Executive Summary and Chapter 1 of Volume 1.

Chapter 1 of Volume 4 describes the purpose and need for the capability to support a transient nuclear aircraft carrier, and the preferred location. As discussed in Volume 4, another entire port does not have to be built; however, changes must be made to support a transient carrier at Apra Harbor.

#### I-341-002

Thank you for your comment.

As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredge over 60-years ago and maintenance dredging continues. Most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) will not be impacted by direct dredging activities. Based on computer modeling, taking into account tides and currents, there are no indirect (sedimentation) impacts anticipated. There is no correlation between the dredging in Apra Harbor and increased chance of a tidal wave reaching the island. In fact, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, which would benefit the coral reefs, sea life and people of Guam. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation for unavoidable significant impacts to coral reef ecosystems.

#### I-341-003

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 334

Received: 1/30/2010 8:06:19 AM

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam.

#### I-342-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-342-001

I-343-001

The 2014 deadline is perfectly fine. GovGuam leaders do not need another excuse to delay this international treaty. It is almost certain, further delay will only play into the hands of those elected officials catering to self interest groups, that do not represent the majority of people who favor the buildup. And because of rise of tensions in Asia (Korea, China, etc) it is imperative that this relocation remain on a faster track.

Fact: the closing of NAS, SRF, and NTCAMs was not in the best interest of national security. Now we are paying a huge cost for that mistake. The relocation must proceed as planned. Bice and staff: keep up the good work.

I-343-001

Thank you for your comment.

I-344-001

This DEIS draft lacks a lot of information that pertains to the impact of the local people before, during, and after the build up. In addition to this, some of the information in it is wrong and inadequate. Such as, the studies done on the amount of clean water, the dredging of Apra Harbor (including the release of radioactive chemicals from doing so), and the timeline on when funds will be provided for the massive improvements in each public agency GWA, GPA, GPSS, GPD, DPW, EPA, and GEDA to name a few.

I-344-002

The people of Guam need an extension in reviewing the draft and sifting through all the information so that we can understand the full impact and prepare properly for the 80,000 people to our island.

I-344-003

This is an increase in half of the population in a very short span of time. Guam is not equipped to handle this especially without the funds from DOD first. To have the build up pick by 2014 is just too fast and unrealistic to sustain everyone's quality of life. The build up should be over a longer period of time like 8-10 years rather than 4.

I-344-004

I heard Congresswoman Bordallo state at the hearing held at UOG, that it was the people's job to find solutions to the problems in the draft. This statement has upset many people because we didn't get a say in choosing whether or not the military came here. It was decided for us. Guam was never given the option of "NO ACTION" in beginning talks about the build up. So this whole procedural process by the government and military is flawed because the people of Guam were never given that option. We should have been given that choice from the beginning and we should still have that choice now. All steps taken now are against the people of Guam's rights!

#### I-344-001

Thank you for your comment. The DEIS provided information about the existing conditions on Guam and probable impacts associated with the proposed military relocation program. The FEIS provides additional information that responds to comments. Overall, the EIS process has addressed potential impacts on the citizens of Guam and proposes mitigation measures to reduce any identified adverse impacts of the proposed actions.

#### I-344-002

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

#### I-344-003

Thank you for your comment. Please see Volume 7 of the FEIS for more information the implementation of an adaptive management program.

DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-344-004**

Please refrain using the Pristine beauty of Guams highest peak Mt. Lam Lam for any military purpose. Importantly, this is where the islands faithful go and worship.

I recommend that you use Andersen's Air Force Base Golf Course for further military installations. The military has condemned the best lands on this island already and now proposing to use Mt. Lam Lam could lose total support for this military build-up.

I-345-001

#### I-345-001

Thank you for your comment. DoD understands and recognizes the significance of access to cultural sites located on DoD property in Guam. Restricting access to certain areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to Mt. Jumullong Manglo (including the Mt. Lam Lam trail) consistent with safety and operational requirements. Final plans concerning access to Mt. Jumullong Manglo (as accessed by the Mt. Lam Lam trail) have not been developed, DoD looks forward to working with stakeholders including groups that use the area for traditional religious activities to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of this site.

I-346-001

I think any additional delay to the buildup is unnecessary. With the latest tensions between both Korea and the Taiwan arms purchase, it is even more critical that the relocation remain on its current timeline. Keep in mind, the treaty is still in effect, and we are one step from the release of RODs. This being a general election year on Guam, politics is a major factor catering to certain self-interest groups or organizations critical of the administration and its policies. The next three years is ample time to prepare the island infrastructure to meet the demands of an increased population. At this juncture, many businesses are prepared to respond immediately to the needs of the buildup. Further delays add more to the cost of the buildup, and discourages potential contractors from submitting bids. Besides, we have invested millions of dollars and time to reach this point; perhaps, we need conduct media campaign, explaining to the people why the relocation in its current form, should move forward as planned for the past three years.

I-347-003

The military buildup is damaging a lot of parts of the island. The population growth that will increase in future will affect us as well. There will be so many people here on Guam. That will mean that our water will most likely run out. It's a possibility that will happen. In my opinion, if there's a lot of people here on Guam, that will mean that there will be more buildings taking over the island. Later on, we'll find out that we have not trees to see. There are many things that the military is doing that is damaging our island. The incident that happened in Okinawa stresses some of the parents. If that incident happens here in Guam, it will set off a bigger problem to think of. We shouldn't be building all of these things for the military. There are other things that need to be fixed that seems to be important too. What about our schools? When is the government going to help out and fix the damages and leaks? There are new buildings being built, but they seem to look on too much in the future. They keep taking their eyes off from the present. Whatever we do today, it will most definitely make a future for us. However, that means it could be a positive future or the antithesis of it.

**I-347-001**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks. The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-347-002**

Thank you for your comment. Although a large number of trees would be removed in certain areas, the vast majority would be trees that are in secondary growth forests and many of these are not native to Guam or are small trees that are abundant in many other areas of the island. Only

a very small number of large, native trees would be removed. Other forest areas will be improved as habitat for animals through such methods as removal of pigs and deer that cause much destruction of the forest understory. The total amount of forest removed that is being proposed, compared to the total on Guam of over 63,000 acres, is small.

**I-347-003**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

for those people that like military's and they think that their cool well they're not well, if you don't believe me or my fellow students just read this whole chapter and try to go in their meetings just listen for those people and also students that want to speak up for what they believe in. As some of you know that military buildup is coming up pretty soon but other people say it's already started before i thought they were cool and kind but I've seen their other side after i went to that meeting for our club and talk about what we can do and the other effects of this military buildup i feel sorry for my cousins because they can't even enjoy the beautiful island that we have because if the military comes then all of this is gone. i hope that we should get together and fix this whole mess. People of the island of Guam THIS OUR OUR ISLAND OUR beautiful island of Guam don't let military people own it! Lets get together and talk about this mess!

I-349-001

Directly from the DEIS:

-“43% of active-duty military personnel admitted to frequent binge drinking. In addition, 67.1% of binge-drinking episodes were reported by personnel aged 17-25 (representing nearly half of all active-duty military personnel), and a quarter of those episodes were reported by underage personnel (Central Broadcasting Service News 2009).” (Vol. 2, Ch. 16, Pg. 1092)

-“Increase in crime by the military dependents on Guam may also be a possible impact. Guam has experienced rising juvenile drug abuse arrests (from seven to 117 between 2002 and 2006) and other assaults from 39 to 160 between 2002 and 2006) (Guam Police Department 2008, Guam Judiciary 2008, Republic of Korea Drop 2008). Dependents of SOFA personnel on Okinawa do contribute to the overall crime statistic. Of the 46 arrests in 2007, 30 were active-duty service members; one was a civilian employee; and 15 were dependents. In 2006, arrests involved 38 service members, three civilians, and 22 dependents arrested. These arrests included 23 minors.” (Vol. 2, Ch. 16, Pg. 1092) Both these excerpts are quite disturbing. They are two intimidating facts and they both scare me in the slightest way. I think that both these issues are related in one way or another. Binge drinking may cause a rise in other crimes.

The first fact that almost half of the active duty military binge drink is a problem itself. What makes it worse is the fact that most of those were by young military.

I am not sure why they binge drink and frequently. It could be for many reasons. Whatever the reasons may be, the way they are handling the issue is very inappropriate. In my opinion, it is a very immature way for it to be dealt with. Even if the reason for binge drinking were not personal problems, over indulging in alcohol for social benefit is immature as well.

Binge drinking is not only a danger for the person doing it, but also for people around them. It could and it does cause many problems in society. In fact, alcohol is a factor that contributes to many fights, murders, rape, and countless other crimes.

It is very unsettling that the marines that are to be moving to Guam behave this way. It instills in the locals such as myself a sense of insecurity on our island. I am aware of the fact that these incidents happen with or without the build-up, but knowing that the rate will increase with the build-up is a scary thought.

It was noticed that the military personnel do contribute quite

## I-349-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

Subject: Recommendation Regarding Guam DEIS - Proposed Military Firing Range

Dear Sir:

I-350-001

I am a 45 year resident of Guam and a retired University professor. I would like to suggest that the Proposed Firing Range on Guam include an area set aside for use as a joint civilian/military trap and skeet range; and furthermore that the military construct such a range as part of the Proposed Firing Range; and further that this trap and skeet range be located in such a way as to facilitate ease of civilian access. Reasoning follows:

1. During the 1970's and early 1980's civilian access to military bases on Guam was relatively easy. There was a trap and skeet range on NCS and another on AAFB (I do not know if they still exist). I was a member of the NCS shooting club, as were several other Guam civilian residents. A mixture of active duty, retired military, and civilians shot together every Saturday. There was even an Air Force general who showed up periodically. NCS and AAFB had shoot-off competitions. There was great comradery, and military/civilian public relations was well served. They could be once again.
2. Development of a civilian trap and skeet range on Guam has been hampered by issues related to land requirements, noise pollution, and the potential for lead contamination. These impediments could all be circumvented if such a range were incorporated within the Proposed Firing Range.
3. The economic and social benefits to the Island residents seem obvious and straight forward. The benefits to military recreation and moral seem equally obvious.
4. Many Marines and other active and retired military and their families have a long history of recreational trap and skeet shooting. Why not encourage Guam military/civilian interrelationships? Military instructors might well provide mentoring

**I-350-001**

Thank you for your comment. Your proposed multi-use of the proposed military firing range has not been considered as part of the proposed actions of this EIS.

for young Guam civilian shooters. Several of the local high schools have junior ROTC programs with shooting components. Why not provide a first class venue for these young men and women to expand their skills and their horizons.

5. Finally, if the facilities constructed were of Olympic caliber Guam would have the only Olympic caliber trap and skeet facilities west of the continental U.S. Such facilities might attract shooters from throughout the region, offering the possibility for generating considerable international good will and economic benefit to Guam. I point out that Guam is a full member of the International Olympic Organization. Trap and skeet are Olympic sports as are air gun and small boar rifle. You never know, a local boy might someday become good enough to compete at the Olympic level.

If DEIS contractors are unfamiliar with the physical requirements of trap and skeet ranges I suggest that they contact the National Skeet Shooting Association, the National Sporting Clays Association, and the National Trap Shooting Association. Skeet and trap ranges exist on many military installations. Their specifications must be readily available.

Thank you for the opportunity to make what I consider to be a responsible, contributive, and realistic suggestion for improving the DEIS and U.S. Military plans for Guam.

Sincere regard,

  
Paul Callaghan

**I-351-001**

Thank you for your comment.

A PRESENTATION AT THE HEARING 31JAN10, PITI VILLAGE, GUAM SPONSORED BY THE OFFICE OF THE U.S. DELEGATE (MS. M.Z. BORDALLO). THIS IS A PRESENTATION BY PCOL ADOLF P. SGAMBELLURI, FMR CHIEF OF POLICE (RET) AND A RESIDENT OF PITI (NIMITZHILL ESTATES).

**I-351-001**

LADIES AND GENTLEMEN, CHELU...There is no doubt the military will have a major impact on our community. Our local government has a duty and responsibility making sure we can maximize what we believed is required for a better Guam.

There is no doubt the military buildup will be an economic boom for the people of Guam. There will be new businesses and employment opportunities. And because Guam will realize tens of billions of dollars to be infused, it means the government will realize over \$100 million in revenues.

Nonetheless, let us focused on the fact that we are actually, Guam...as I can venture to say is the "big picture" since it really has to do with national security...that's the big picture. Guam's strategic location makes it the most desired position to be considered as essential for our nation and its realignment of forces in the Western Pacific.

And that is why it is essential and critical for local elected officials and agencies to work closely with the military and the federal government to maximize whatever that the community gain from infrastructure improvements and educational requirements.

Nevertheless, I am saddened to learn from my associate (Mr. David J. Sablan) who reported that "...activists were moaning and groaning and at times were ranting about their children's future would be negatively impacted--because we are going to have a military buildup and they are going to take our land and hunt our deer and keep all the fish in the ocean to themselves.

No one addressed to my knowledge issues from the DEIS proposals.

I was born before the war. And I experienced the styles of the Japanese government who were mostly focused to have the local Chamorros know how to have and plant rice paddies. Asan and now the U.S National Park grounds were rice paddy fields. I grew up immediately after WWII when we had a lot of military on the island, over 250,000. They were all part of our community. And were well disciplined. They were too busy building up the island to continue the war efforts and operations toward Japan.

During this time frame, I can say that the only problem I witnessed was the fact that the Philippines Scouts had to be relocated/transferred to Okinawa as ordered by Admiral Chester Nimitz. It got to the point that they scared the local Chamorros. They were continually fighting amongst themselves.

I distinctly remembered the periods from 1946, that Guam had many civilian contractors, too. The big contractor on Guam was the Brown Pacific Maxon (BPM). Many in the civilian contractor community, military and their spouses were friends of my parents. And when we celebrated an occasion such as a village fiesta, a wedding or christening, they would be invited.

It was not uncommon at all to see many U.S. mainlanders at our parties and family celebrations.

The BRAC Commission reduced the number of military personnel on Guam, and many of our local residents went to other bases in the U.S. Mainland to stay with their employer, the federal government. A generation and a half of our residents have grown up now seeing more Japanese tourists than our own fellow Americans in the military and their dependents.

The real change for Guam, in my opinion, began when we started welcoming Asian tourists to Guam since the early '70s. We now welcome around one million visitors to Guam each year. On any given day on Guam, we have about 7,000-8,000 tourists up and about enjoying themselves. They changed Tumon and some parts of Guam for the better.

They basically filled the void left by the BRAC Commission base closures to some extent. The biggie as I can recollect as a result of the BRAC hand me down is Tiyan. The military shared the Agana Naval Air Station with Guam under its total control on the opposite end of the air field.

The military is coming back now over the next few years. We should welcome them home. We are all Americans first. Our "house" is somewhat full with the tourists now, and our services and amenities are strained (infrastructure, roads, healthcare, etc.). But instead of viewing this challenge to improve as a great thing for Guam's future, we have "whinners" dominating the podium, the cameras and the microphones. These people have the right to say their piece and I respect that right, but what they are offering is FEAR and DISDAIN for people who are willing to protect our citizens as a whole. I believe there are more people on this island that support the buildup, than those who seem to dominate the media reports.

It is time for our elected leaders to take a turn for the betterment of Guam. We should be in conference rooms and offices with the military planners (JGPO) seriously talking about sharing responsibilities and laying out plans A, B, and C, including financial supports, instead of in front of a camera talking about plans that are still in the development stage, albeit we are close to finalizing which options the military will choose for all their requirements.

I am sure that if we discuss these matters with the military brass (development impact costs, financial help, cost-sharing, etc.), the military and our local leaders when working as a TEAM GUAM can appeal to Congress and the Administration for support of our primary plans and contingencies.

Chances are excellent we can get this buildup job done quickly!

If we partner with the military and show that to the general public, the naysayers will be outnumbered and marginalized, as that will be their choice. The buildup train will then leave the station towards a better Guam and prosperity.

We need to make sure that the generation that grew up during the Post-BRAC period is not influenced by the naysayers who are bitter about something. Their advocacy for Guam's future is the wrong deal for our children and grandchildren.

**I-351-002**

Thank you for your comment.

Many of our young people do not realize that the military have been a part of this community. Right after settling in after the Spanish-American War, the military on Guam mostly from the Navy and the Marine Corps were very busy building schools, bridges, roads, and even taught schools. In fact, we learned from the assigned Marines the concept of American Policing. The Marine Barracks on Guam was responsible to train the young men in the arts of soldiering and to have a monthly pass and review at the Bradley Field. And they were good! I used to watch them drill and during their performance for the pass and review. This was the beginning of our Guam Militia and subsequent activation of the Guam National Guard, which we are so proud of..

There are many to think of and realize that it is for Guam and its people. For instance the DPW has been working closely with the federal agencies and a private consultant to plan for roads and transportation changes. We can anticipate that Guam will have better roads paid for from our federal government with federal grants. And if we are going to fight and rant what is about to be bestowed on us, the People of Guam, we would never be able to ensure that similar efforts happen with power, water and wastewater, and to increase its power generating capabilities, as well as expand and repair our existing water and sewer lines.

Who can? Who can ensure that the entire island benefits from these infrastructure upgrade, and that the military are in position to help defray the cost of these repairs, restorations, and to realize savings in our monthly utility bills?

Uncle Sam and its military, of course! I am sorry but “Ms. Tollbooth” of the Guam Legislature just cannot do it.

I am sorry to say but we need to get off the train, and stop talking like we are helpless and just don't have the talent and skills to make things right. If you believed that you have been treated as “second class citizens”...it's your fault! No one can make you feel inferior without your consent. Exercise your constitutional right and show that you got the right stuff to be a first class citizen.

And please demonstrate how we are going to get our economy off the ground? Repairs are needed so bad at our schools. How are we to attract visitors if we do not have a show case of an island? We spent more times in the welfare lines with our cell phones instead of trying to assist in making the island job plentiful, educational programs friendly, and in the words of our brother Bert Unpingco: WAVE! Which means is to “wave at visitors with enthusiasm.” Let's Not Show Hateful Behavior which is not part of our traditions. Let's show our Guam Hospitality.

And please let us not keep pushing culture when what we are really trying to say is tradition. Culture is the shared beliefs and values of a group. On the opposite side is tradition: a long established customs.

**I-351-002** | And lastly if you can please bare with me so that I can share with you what we the veterans on Guam have submitted to DEIS and JGPO to endorse the military buildup:

**EVERYONE OF THOSE POINTS BELOW ARE CONSIDERED  
VALID AND SHOULD BE APPLIED TO SUPPORT OUR  
OBJECTIVES.**

**WE ARE IN FAVOR OF THE BUILDUP BECAUSE:**

- **JOBS:** Too many of our people leave island and never come back because there is no opportunity for them here.
- **SMALL BUSINESSES:** The buildup will create opportunity for those who have dreams/for those with small businesses.
- **REVENUES:** Our Gov't desperately needs more income in order to provide the services the people depend on.
- **INFRASTRUCTURE:** We know the infrastructure will finally be upgraded and the Federal Gov't will assist in getting this done.
- **ROADS:** So many of our roads needs upgrading and the master plan shows a lot of funds coming in to improve our roads
- **SKILLS:** To get and keep good jobs one needs better skills and now there is a lot of help for training and education.
- **EDUCATION:** Our education achievement is very low and the additional revenues can help upgrade education.
- **RECREATION, ENTERTAINMENT, RESTAURANTS, AND SHOPPING:** a greater number of visitors means greater selection, more things to do.
- **REGULAR MILITARY:** Guam has a very high percentage of its people in the military and this is one way to recognize their sacrifices; gives them a voice, **AND ENSURE THEY ARE GIVEN OPPORTUNITY TO HELP IN MANY WAYS: TEACHING, NURSING, PROFESSIONAL SKILLS, AND SO FORTH.**
- **RETIREEES AND VETERANS:** Guam also has a large number of retirees and more military means greater services for those who have served.
- **HEALTH CARE:** With a larger population more facilities and services will be available for all people.
- **COLLEGE/GCC:** Many of those who will end up living on Guam will help the UOG fulfill many of its priorities and GCC to more broadly serve the public.
- **GARBAGE:** By the military working with our own solution to garbage, perhaps the solution will be less costly
- **AIR TRAVEL:** With more people traveling, competition in the airlines may bring the price of air travel down.

Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 350

Received: 2/2/2010 11:30:18 AM

**I-352-001**

The military buildup with not only effect the island Guam, but as well as the people that live on it. It's not only going to affect our culture, but our main stability of life. From the Marine life to the very soil we stand on. As quoted in the DEIS, "National Environmental Policy Act Section 101 2(c)(iv) requires a detailed statement on the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity." What this is basically saying is that they have a drawn out idea of the happenings that will occur during the long and short terms when the military comes.

"There are numerous plans, procedures, protocols, regulations, and laws that have been established to protect human health and the environment. Compliance with these regulatory mandates by DoD and its contractors would reduce both short-term and long-term impacts." I find this quite helpful, but I still feel as if they shouldn't be doing any of this. Guam's land, air, and marine life are what make this island unique. The military is taking too much. I understand how they say they will still preserve our ancient artifacts by moving it to a stable place, but they do not understand that it's not just about the artifacts, but the place where it was placed. Those lands are a story itself.

**I-352-002**

From what I understand they are listing what the longterm and shorterterm effects for these resources. It just all seems to be messing with our daily lives. Like for our coral reefs, they are going to take 100ft of the coral so that the military can bring in their landing crafts for the plans. Those coral reefs are the very reason we are safe from tsunamis. Taking it away only leads us to in harm's way.

**I-352-003**

We don't have the utilities to take on the 8k marines and their 9k dependents. Guam is practically overpopulated as it is. The traffic is absurd, & quite frankly I'm tired of being late to school. What about their dependents a great amount of them would be children. Where would they go to school? Guam High is full already and so are the public schools. GDOE doesn't have the funds to build a new school for them; we are already having a hard time trying to find a place for JFK. So, what are they going to do, yes they are going to take more land. It's just sad that they don't understand that Guam doesn't have sufficient anything to support all these people coming. Hopefully the military uses the money they are getting from Japan wisely for the situation.

**I-352-004**

**I-352-001**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-352-002**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-352-003**

Thank you for your comment. As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. Most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) will not be impacted by direct dredging activities. There is no correlation between the dredging in Apra Harbor and increased chance of a tidal

wave reaching the island. In fact, the Navy as part of the "build-up" on Guam, has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, which would benefit the coral reefs, sea life and people of Guam. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation for unavoidable significant impacts to coral reef ecosystems.

**I-352-004**

Thank you for your comment. The impacts on the Guam public school system are discussed in subsection 4.4.2, page 4-42 of the SIAS. Table 4.4-4 in the SIAS provides the potential increase (maximal) of student population in the Guam Public School System from 2010 to 2020. Providing a brief summary, at the peak population year (2014), a total of 7,937 students could attend the public school system; by 2017, when the operational (long-term) conditions occur, the students generated could be 909. This is based on the direct and indirect (induced) populations resulting from the military relocation. The military dependents would be educated in the DoD school system and should not affect the public school system. Money generated through taxes from the increased population and federal payments to schools (based on student populations) should provide revenue to fund resources for the public schools.

I-353-001

From what I gathered on the "14 Reasons Why We Don't Need the Military Buildup", by the website Weareguahan.com they talked about the employment issues. It says, "The majority of the 18,000 jobs coming through the buildup will not go to locals. Only 2500 jobs will go to Guam residents, while the rest will go to off-island workers, the majority of which will be temporary." What is that?! That is a basic rip-off. Most of the people on Guam don't get that, that what's they have in store for us.

They only get that there will be all these job opportunities, yet little do they know very few of them will be able to get these jobs, however; they aren't the best jobs, and these are basically lousy jobs that won't last very long. Guam is getting screwed over and the buildup hasn't even begun!

I-353-002

What really irritates me about this whole situation is that Japan is so willingly eager to have the military leave their land to come here so that their crimes against women will finally stop. There has been researched done that proves that these crimes has indeed started when the military first arrived in Japan. What scares me is that I am a young female that is a target to those men who will be arriving. Guam isn't as advanced as Japan is. We don't have protestors or support groups for these situations. When they do arrive I think a way to solve this is to keep the marines in a strict schedule. Whereas they should have a curfew or since Guam is trying to close down or relocate the "massage parlors" they should move it closer to the base.

Think about it what if it was your daughter, granddaughter, niece, girlfriend, or wife that has been violated. Wouldn't you want justice to be served? But from what I have encountered the military won't see it that way. They will try to explain to you that these men are their finest, which by the way is a pretty lame excuse because it isn't like back in the days where men were drafted in to the military, these men freely volunteered to be in the military.

I-353-003

The only helpful honest way where I can see these issues to be solved is when these decisions are being encountered Guam should be involved. They should be thought of in the process and concluding an answer. Just because we are a territory doesn't mean our opinions don't matter. In a way it should work the like the congress where they have the democrats and republicans sit in the same room to discuss the issues and try to find a mutual decisions that satisfies both parties.

**I-353-001**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the SIAS.

As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will stabilize at a level above the current situation. The fluctuation in the number of jobs is expected to be greatest in the construction industry. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the Socioeconomic Impact Assessment Study (Appendix F of the DEIS), notes that the healthcare industry is currently short of workers, and that the need for workers after

the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

**I-353-002**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group

of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-353-003**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

Build your stuffs on your own Base's

Jelly Scream  
to JAN. 22 2010

I am from chukot but i have been on guam  
for more than 14 years so i consider guam as my  
I-360-001 | home. and if you guys do what you do you are  
going to kill the plants and animals in the water. You're going  
to poison the water we drink and swim in. This is our  
I-360-002 | home and you can't just come and do what you want  
to do cause we are working hard for our island trying  
to keep it clean and healthy. You know what i mean.  
i mean this is not only concerning this generation but the  
next generation and the next. i don't want my kids  
if i ever come any to grow up and not see how  
beautiful guam is now. if you guys do what you  
wanna do the next generation of kids will never  
know how beautiful and how clean guam was before.  
i'm gonna say if you're doing what your doing steps  
cause your causing a lot of pain to us. islanders.  
this is my home yo.

**I-360-001**

Thank you for your comment. As described in the water resources impact sections, implementation of the proposed actions would be in accordance with all federal, military, and Guam regulations. The DOD would enact measures to minimize potential impacts to nearshore waters and avoid significant impacts to drinking water and surface waters.

**I-360-002**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

My name is Alysha MENO. I am from the village of Inarajan, Guam. I am a U.S. citizen. I want you to stop what you're doing and listen to what I have to say.

I-361-001

I do not want the military build up to come to Guam. I love my island and all the people on it. If you bring the military to Guam there will be a huge build up of our population. We already have enough people on Guam, but we don't need 10,000 more. You're already taking away our

I-361-002

history. You're building things on top of our people's work.

You wouldn't like it if you were here and people were taking away your history.

I won't be able to hike anymore with the increase of people. When I finish college I will not be able to get a job because they are taken.

Alysha,

### I-361-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

### I-361-002

Thank you for your comment. The DoD has a vigorous program of managing and protecting historic properties on its lands on Guam. Properties managed by the DoD comply with all federal laws relating to cultural resources. Each installation has an Integrated Cultural Resources Management Plan that stipulates the standard operating procedures for evaluating resources according to National Register of Historic Places criteria and long term management of these resources. Because these resources fall under federal jurisdiction and access to many of these areas is limited, they are, in general, protected from vandalism, collecting, or other forms of disturbance that could occur when areas are completely open to the public. If historic properties would be affected by future projects, all installations would comply with the National Historic Preservation Act and go through the Section 106 process to avoid, minimize or mitigate adverse effects to these resources.

### I-361-003

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is

75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%.

The decrease in the number of jobs is expected to be greatest in the construction industry; however, the number of construction jobs after the proposed action is expected to remain higher than it is currently. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the DEIS notes in Appendix F, Socioeconomic Impact Assessment Study, that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present.

I-362-001	
	I don't want the military to come here because the island is going to be over populated. They are going to
I-362-002	build the bases on the historical Chamorro sites. They are going to
	make a lot of jobs that the local people might not get.
I-362-003	

**I-362-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-362-002**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in much fewer sites directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to historic properties were avoided. DoD will continue to work very closely with the Guam SHPO and other stakeholders to continue in our efforts to avoid, minimize and/or mitigate adverse effects to cultural resources.

**I-362-003**

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

I-365-001

Thank you for your comment.

I-365-001

I think that the military build up is a great disturbance to Guam and its people. I feel that they shouldn't come here because who would want a group of about 9000 men who just got kicked out of Japan and has been raping women to come and stay in such a beautiful and peaceful place.

I hope we as islanders should stand up for our family and children, to the people of Guam. TO not allow such an act to affect or interfere with our peace and lives. I truly hope that the government would stop thinking about themselves for once, and look around and think about us and how feel about the situation.

January 21, 2010

I-366-001

Hi my name Stacey Reyes. I'm from the village of Inarapan. I'm a US citizen. The military build up is not that great can you put it somewhere else like in Texas. I just want this island to be peaceful.

thank you.

**I-366-001**

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

Jan. 21. 10

I-367-001

Hi, my name is Meliza. I'm an 8th grader at Inarayan Middle school. Today, I learned that the military is going to make a bigger place for them. I really don't agree to it because that would be just like destroying someone's home or culture. And I say that they already took up enough spaces of Guam.

**I-367-001**

Thank you for your comment. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Off 2/2/10  
Friday

I-368-001 I'm really concerned about the military build up. Reason being, too many traffic jams, roads not equipped for road traffic infrastructure. lands will be taken away from landowners; and most of all, crime rates may go up, and more facilities needed.

I-368-002

I-368-003

From J. Abongue  
(Teacher)

**I-368-001**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

**I-368-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees. Specific areas being considered for acquisition are identified in the Final EIS.

**I-368-003**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-369-001**

Thank you for your comment. The DEIS and FEIS analyses indicate that impacts to air quality would be less than significant.

I-369-001	What is important to me is sports.
	The military build up.
	Pollution is what effects sports.
	when theres a lot of people on the island
	its going to be hard to breathe air.

I-371-001

All Name is ~~MARINA~~ IM from the north side  
IM from Yigo, like care for safe.

I-372-001

Thank you for your comment.

I-372-001

I don't think that the ~~military~~ military should not come  
to Guam cause about the land and the  
ocean. & ~~that~~ we will be fighting for everything

I-373-001

I dont think the military should come theres not enough room for the people military. If the military comes they will destroy pagat cave. I know a lot of people who like going to the cave. There just going to make a shooting range. We dont need a shooting range. I think people will get shot if they come. ~~with some~~

I-373-002

We have alot of traffic now if they come were wont have space on the roads

**I-373-001**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-373-002**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

I-374-001

Thank you for your comment.

I-374-001

We love our island, and knowing the military is coming to ruin our lookouts, ocean, corals, reefs, fishes, and ancestors sites. They are going to ruin our island without even knowing they are. They should settle somewhere else where other people don't care about their island or country.

MaLollo  
B  
Cruz

I-375-001

Thank you for your comment.

I-375-001

~~I~~ I feel good about our  
troops coming home. So they South  
could see their family and Side  
take a good vacation.

I-376-001

We don't want people to come  
and take our Island from us. We don't  
want them to take our beautiful sea  
life away.

**I-376-001**

Thank you for your comment. The Final EIS analyzes a number of subjects identifying the potential positive and negative impacts of the proposed action. Many of the beneficial impacts attributable to the proposed action are based on jobs and money (from construction and operational expenditure) that will flow into the economy. That specific information can be found in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F of Volume 9 in the EIS as well as the socioeconomic chapters of volumes 2 through 7. Jobs analysis was based on the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. By 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and Freely Associated States of Micronesia) in search of jobs, to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs. It should be noted that the jobs that Guam residents would fill are based on the available supply of qualified workers. That is, it is anticipated that the new jobs would capture the amount of qualified workers on Guam for those positions.

Economic benefits would also occur through the circulation of construction and operational dollars spent on Guam and the multiplier affect (recirculation of money) in the Guam economy. The economic benefit also consists of revenue to the government of Guam in form of taxes, user fees, and permits and approvals. Another area where benefit is seen is that the local businesses would be able to sell their goods and

services during both the construction and operational periods. Volume 6 of the Draft EIS describes the existing utilities and infrastructures on Guam as well as the proposed actions that would provide the capacity needed for the additional population. Each utility is covered and for each one, the preferred actions (to achieve adequate capacity) are identified. In some cases, additional capacity with better treatment (i.e., wastewater) is being proposed. Roadways essential for the buildup would be improved, widened, and some bridges replaced by funds provided under the Defense Access Road (DAR) program.

I-377-001

To who ever this gets to. I would like to make a comment about the military build up. I think that its stupid. People and place will be out of bussiness and we dont know how these people are. I mean maybe they are violent people. Maybe they're perverts. I dont want anything like that here. And besides bringing those people here will increase crimes on guam. I mean our culture is ~~is~~ about to die so why help get it back. That's how I feel. My thoughts about it.

I-377-002

### I-377-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-377-002**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-378-001 | I've been here since I was born  
 and the reason why I don't want  
 want them to come here because  
 there ruining the reef and there  
 breaking down the marhol cave and that's  
 been there for along time I don't see why they  
 need to do all these to this island.  
 its already reef w full with alot of tourist and  
 we don't need more... my brother is a Marine and  
 he also doesn't agree with this military thing

**I-378-001**

Thank you for your comment. As identified in the EIS, the proposed dredged area within the active commercial and DoD harbor was previously dredge over 60-years ago and maintenance dredging continues. The EIS acknowledges there would be unavoidable significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish from the proposed action. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing only short-term and localized effects. To lessen these effects, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains to catch a high percentage of the resuspended sediment, biological monitors, and halting of dredging activities during potential coral spawning months. Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the coral reefs, sea life and people of Guam. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7.

what matters to me is having a job

the reason why I want a job because  
when I grow up I might have a family  
to take care of and that's why I  
want a job

**I-385-001**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

I-386-001

Thank you for your comment.

I-386-001

I think that the military buildup is not  
~~doing the best~~ the best for ~~our~~ our island  
people should vote weather they should do  
this or not. people need jobs and i do ~~to~~ to

Military Buildup

Hi my name is Anthony Cruz and I am writing this note because we dont need the military. All the things we need is the help from the people and the care. The government is trying to make it seem like there helping us but all they really want is the money and to take over our land and destroy us. Guam is good the way it is because we have eachother and we have the love. So Guam is good and we dont want the military. They are destroying our land and most important, our people.

If they take place over the mail  
then I would fight for it. If they take U.S.O Beach  
that is messed up for the other people.  
And some other places will be replace by the  
military then the people will not live anywhere  
in Guam.

**I-390-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

My body is the most important  
things of my life.

Because the food are gonna get expensive.  
and i'm gonna get less food.

that's why my body is important.

My name is Brian Ci Muchu I am 15 years old.

I-393-001

The Military Build up will not help Guam. Japan is sending the Military to Guam, because they are committing crimes in Okinawa, so if they come here they will do the same on Guam.

I-393-002

Plus, they're going to take our land & teachers.

I-393-003

They're going to make the prices for houses, cars, and other important things go up. They're going to take our jobs, and the people of Guam will live on the streets.

### I-393-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and women on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-393-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-393-003**

Thank you for your comment. The FEIS anticipates that military housing will be built within the main cantonment area. It is anticipated that the majority of Marine families would rent units in the military housing and generally not compete with Guam residents for available housing units. It is likely that housing prices and rent will increase in the short term. After the construction period, housing and rental prices could decline because the construction labor force (not including the H2B workers who will live in dormitory type quarters) would leave Guam.

Relating to cost of living and the proposed military buildup, it is noted that the history of inflation and recession of Guam's economy from the 1970s to present was provided on page 3-47 of the SIAS. In subsection 4.3.1.4 (beginning page 4-10) of the SIAS, the subject of impact on the standard of living is addressed, stating: "Standard of living is a measure of purchasing power. If the standard of living increases for a person it means they can purchase more goods and services. If the standard of living declines for that person, he or she can purchase fewer goods and services. Changes in a person's standard of living are determined by

their income and the prices of the goods and services they tend to purchase. A person's standard of living will increase if their income rises faster than the prices of goods and services they tend to purchase. A person's standard of living will decline if the prices of goods and services they tend to purchase rise faster than the person's income. In both the construction and operational components, the average wage of workers would increase as a function of greater demand for labor. However, the price of goods and services purchased by individuals would rise as well. It cannot be definitively predicted whether wages or the price of goods and services would increase at a faster pace. If wages earned by a particular household rise more quickly than the price of goods and services, then the standard of living would increase. If the price of goods and services rises more quickly than wages, the standard of living would decrease. For households on fixed incomes, the result would be reduced purchasing power. Those with the ability to quickly renegotiate their wages will have a better chance at maintaining or increasing their standard of living." On page 4-11 of the SIAS, the discussion continues and discusses the income of military related construction and operational jobs that will, on the average, be higher than the present average wages on Guam. It concludes: "In terms of cost of living, from 2000 to 2008 Guam workers have seen their standard of living decline by 30% and there is no reason to expect the military buildup to reverse that trend – Guam workers will likely to continue to see the cost of goods and services rise faster than their incomes. While the proposed action may not represent a reversal of this trend, it will slow the rate of decline in the standard of living that has been prevalent since 2000."

K:O KAREN

I-394-001

HEY MY NAME IS K:O ~~IM~~ im From SINAJANA  
AND ABOUT THE MILITARY BUILD UP IS  
THAT I DON'T WANT IT TO TAKE ALL THE  
PLACE, SO THAT WE WON'T HAVE THAT  
MUCH SPACE. AND IT WILL COST A LOT  
OF THINGS.

I-394-001

Thank you for your comment. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Military Bunker

The thing that's most important  
to me is everything. I don't want  
the military coming to Guam,  
because Guam is good the way  
it is. I guess the military don't  
understand that our island is gonna  
get polluted.

I-397-001 | I am concerned with military taking  
away land from locals without compensation.  
I-397-002 | Also with the closing of the Race park  
to accomodate the firing range.

**I-397-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-397-002**

Thank you for your comment. The Proposed Action would result in the acquisition of lands on the east side of Guam near Route 15 and the existing Andersen Air Force Base South property and the construction of a live fire training range complex on the site. The lands consist of Government of Guam controlled parcels as well as a few privately owned parcels. The Government of Guam parcels are held by two entities, the Chamorro Land Trust and the Ancestral Lands Commission. These entities manage certain Government of Guam land holdings to support native Chamorro interests and compensate land owners for lands currently controlled by the federal government.

In the northern most parcel, under the control of the Chamorro Land Trust, there exists the Guam International Raceway. This entity, which is a non-profit organization, operates a raceway complex consisting of a drag strip and various motorcycle and off-road vehicle courses pursuant to a 20 year license with the Chamorro Land Trust. These recreational facilities satisfy a significant component of the public demand for racing

as well as accommodating periodic police vehicle training. The license is set to expire in 2018. Under the terms of the license the Guam International Raceway is able to remove aggregate mined from the site to improve its operations, but at the option of the Chamorro Land Trust must return the property in "pristine" condition upon the termination of the license. The license clearly states that the Guam International Raceway has no interest in the underlying property pursuant to its license. Further, there is no right to renew the license.

Should DoD decide to acquire land for the Route 15 training range complex, an offer of just compensation would be made to the owners of the property, including the lands held by the Chamorro Land Trust. The just compensation offer would be at the full fair market value of the property, based upon an appraisal of the property and its highest and best use. Since DoD would acquire the property from the fee owners, any compensation to the operators of the Guam International Raceway would be a matter to be determined between the current land owner, the Chamorro Land Trust, and the tenant, the Guam International Raceway.

In the event DoD acquires the land, the Guam International Raceway would have to decide whether to continue operation in another location. If it chose to continue operations it may be eligible for relocation assistance from DoD pursuant to the Uniform Assistance and Real Property Acquisition Polices Act of 1970. If eligible, DoD would provide relocation assistance in the form of advisory services, and some specific financial assistance related to a move, but would not be responsible for the physical relocation of the operations of the Guam International Raceway.

As to possible sites for the relocation of the Guam International Raceway, such actions would be under the control of Government of Guam officials as they are responsible for non-federal land use decisions on Guam. Given that a raceway complex is an industrial activity, it is

most likely that any siting of a future raceway complex will be on lands zoned for such industrial activities and not within lands deemed recovery habitat for ESA listed species. Should the Guam International Raceway decide to continue operations and be eligible for relocation assistance from DoD, DoD will work with Government of Guam land use and natural resource officials to ensure that habitat concerns for ESA listed species are taken into account in any relocation effort.

I-398-002

When do we, the people, have a say in this?

You made your mistakes, but you bring your mistakes

I-398-001

to our island. You say we should write, yet you kick

us out of our homes and just go and take all

I-398-003

land. You say the kids are the future, but you gonna

make life 10 times harder on us. Just thank

before you act. Think what's really going to happen.

**I-398-001**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-398-002**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

**I-398-003**

Thank you for your comment.

01-21-10

I-399-001

Hey, my name is Romero and I am from Talofofo. I don't think it's right for the military buildup. I think it's not right because it will be too crowded. They might chase people away from their houses. I think we should not follow the military buildup.

**I-399-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

My name is Jeremy and I'm from Mexico. I don't think the military build up is right. Even though I want to join the military I think HS is still wrong. It's going to be so crowded. There's already too much people here. There's going to be much more popularity. I don't want them to make us from our Island. We were here before them. Why should we follow this build up. Why should they destroy our history sites. They have a lot of land in Texas. I don't want to grow up in south and have a lot of traffic on the way up town.

I-400-001

**I-400-002**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in many fewer sites being directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the stakeholders to continue our efforts to avoid, minimize, and/or mitigate adverse effects to cultural resources.

**I-400-003**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

- Military Build Up - \*TRIPLE J\*

they I go by the name of Jennise Ann duenas Crisostome. My friends call me "Jinx" that's my tag name. I'm from the village of "Talofofo aka gods country".

"What I have to say about the military build up."

I-401-001

I wouldn't want the military to come to our island because we already have to many people if they come into our island we are gonna have to much problems like traffic & crowded. I

I-401-002

don't want us to wake up in the middle of the night because the airplanes and ships. I don't want to hear gun shooting and bombs. I really don't

I-401-003

want us to be crowded because the south doesn't hardly have people & if the military comes we are not gonna be small. The bell rang so bye.

I-401-001

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The DEIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

I-401-002

Thank you for your comment. Nighttime flight activities in the Talofofo area would be due to the use of the Naval Munitions Site and would total 38 operations per year. The noise levels would be below levels causing sleep disturbance.

I-401-003

Thank you for your comment.

Hiro My name is Thomas  
Shane Benavente.

I-402-001

I want to say that I  
don't like how they are  
bringing the military over  
if we have a small  
island. Why can't the military  
go like somewhere else.

#### I-402-001

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

I-403-003

Hey my name is John S.N. Barinas,  
I am from ~~Marajan~~ Malojloj. I don't  
want the military buildup to happen

I-403-001

because they are building things that  
has ancient things that in our culture,

I-403-002

and there too much people in Guam,  
and it's overpopulated.

**I-403-001**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in many fewer sites being directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with stakeholders to continue our efforts to avoid, minimize, and/or mitigate adverse effects to cultural resources.

**I-403-002**

Thank you for your comment. Relating to the population figure of about 80,000 people, it should be noted the figure represents a maximum figure when most of the construction workers are still on Guam and the military populations arrive (2014); once construction is completed, the operational population would be about 33,400 (2016) (see the SIAS, Table ES-1, on page iii). Mitigation measures (as appropriate) to address the significant impacts will be discussed in the Final EIS.

**I-403-003**

Thank you for your comment.

I-404-001

Hey my name is Aneliza. I'm from Guam.  
This military build up is not that great. Can't you  
put it somewhere else. I want to be heard from  
this small island. We won't have space for more  
people or military. I just want this island to be  
peaceful and safe. All Guam needs is to be heard  
and to build the military build up somewhere.  
I don't like how this is going to be. There's  
too much people on Guam. Especially on the south,  
of Guam.

Jan 21, 2010

Thank-  
You

**I-404-001**

Thank you for your comment. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-405-002

Hey, I a guam citizen and I want you to know I dont want military buildup because guam's culture sights is dying and we need tourism.

I-405-001

Also, why dont make a firing range at the base where your golf course is at. Whats the point of using a golf course when it's not important right?

**I-405-001**

Thank you for your comment. Potential firing range locations must meet planning criteria for operational and safety purposes. A description of the alternatives development process is presented in Section 2.3.2 and Figure 2.3-13 of Volume 2.

**I-405-002**

Thank you for your comment. The DoD conducted archaeological surveys of over 5,000 acres of land in the planning stages of this project. The DoD also conducted studies of traditional cultural properties on Guam and the CNMI, as well as archival studies and oral histories. This early identification and consultation with the SHPO from Guam and the CNMI and other stakeholders resulted in many fewer resources being directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam and CNMI SHPOs to mitigate any adverse effects to cultural resources and to provide information necessary to protect historic properties.

I-406-001

I live in the village called  
Talofofo and what I hate about the  
military build up is the people and its  
going to be to much people and  
like the way it is now on guam!  
and I want it to stay the way it is  
on guam, and it will be good  
money but still guam is better  
with out that because we have honey  
so I don't want no sounds around  
my house and plan's around my  
house.

I-406-002

I-406-001

Thank you for your comment.

I-406-002

Thank you for your comment.

- Military Build up.

January 21, 2010.

I-407-001	Hey my name is Aesha Reyes. I am from Guam. I am 14 and I attend Inarayan Middle School I reside in Yona, Guam. I do not want the Military Buildup on Guam.
I-407-002	It will effect us more. It's gonna overfill our island. We do not want more dominies and rapes on Guam. We are better the way we are! Put them somewhere else!

*Safways*

*- Safways ;)*

**I-407-001**

Thank you for your comment.

**I-407-002**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct

and enforce laws to protect the citizens of Guam and our military personnel.

T a P 1/20  
Hey my name is  
Maryjo a.k.a Mij.  
I am from Guam.  
I attend I.M.S.I  
don't want more  
rapest and drugics.

I-410-001

Thank you for your comment.

I Am a US citizen and I want to stop the military build up from happening. The first thing I want to talk about is the population. Our population is about ~~100~~ 180 thousand people. I think that the military build up isn't really important to Guam only to the US. People say on the news that there will be more jobs and more money, but that is only for the military. Please stop the military build up.

I-411-001

**I-411-001**

Thank you for your comment. Relating to the population figures, it should be noted the figures represent a maximum figure when most of the construction workers are still on Guam and the military populations arrive (2014); once construction is completed, the operational population would be about 33,400 (2016) (see the SIAS, Table ES-1, on page iii).

Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

I-412-001

~~hey~~ ~~my~~ name is troy  
Quinene. I dont want the military  
build up here, because there's going  
to be drug's and trouble makers.

I-412-002

and there's going to be more people  
and more places, there's so much  
houses already.

11/21/00

**I-412-001**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-412-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-413-001

I believe that the people of Guam need to be more informed about the military build-up. This would mean that factual information should be provided every step of the way through the process. The concerns of the people on this island should also be heard and addressed for this transition to be meaningful and successful. Our leaders must always remember to keep our best interests in mind.

**I-413-001**

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

I-414-001

Thank you for your comment.

I-414-001

I am a citizen of Saipan and I am disappointed if the build up will destroy all our local communities and the build up will destroy our ocean life and the historical sites and all the military will get drunk and start all kinds of violence to our people and other Pacific Islanders

I-415-001

I think, as a citizen of Guam, the government should find more better sites to use, than some historical & tourists attractions. I mean without these places open, the experience of the average tourist coming to Guam will be less memorable. Marble Cave shows the beauty of underground water caves.

**I-415-001**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-416-001

Thank you for your comment.

I-416-001

I don't want them to come because there's not enough room on the small island. and it's gonna make it hard to get a job cause it's all gonna be taken by the people from the military and they might bring more diseases

I-417-001

Thank you for your comment.

I-417-001

~~##~~ I think that the military shouldn't come to Guam because people are going to lose some of their land, we won't be able to swim at Marble Cave, and have you seen the road already there pretty packed why you going to bring the military.

CCRIOS ...  
Acaisen ...  
1-22-10 ...

I-418-001

I think that it's not a good  
idea because Guam's gonna be too  
crowded and probably the crime rate  
will go up. Also i don't think it's  
right for them to just take away  
our historical sites like Pagat cave.

**I-418-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-419-001

Comment noted.

I-419-001

My name is Ryan Robert and I think  
that this military build is bull shit  
and think they should build the firing  
range somewhere else so get the f\*ck off  
my island we go to normal cause my that  
speaker says I don't think we even need  
the military

I-420-001

My name is Jerett Muna  
and I think that if the military  
is going to come to Guam they  
should drop gas prices. They should  
let the local people have benefits.  
They should make everything's prices  
drop and they should fix the  
roads. The locals should get  
something in return because they  
are going to destroy our cultural  
sites and villages.

I-420-002

### I-420-001

Thank you for your comment. The Final EIS analyzes a number of subjects identifying the potential positive and negative impacts of the proposed action. Many of the beneficial impacts attributable to the proposed action are based on jobs and money (from construction and operational expenditure) that will flow into the economy. That specific information can be found in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F of Volume 9 in the EIS as well as the socioeconomic chapters of volumes 2 through 7. Jobs analysis was based on the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. By 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and Freely Associated States of Micronesia) in search of jobs, to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs. It should be noted that the jobs that Guam residents would fill are based on the available supply of qualified workers. That is, it is anticipated that the new jobs would capture the amount of qualified workers on Guam for those positions.

Economic benefits would also occur through the circulation of construction and operational dollars spent on Guam and the multiplier affect (recirculation of money) in the Guam economy. The economic benefit also consists of revenue to the government of Guam in form of taxes, user fees, and permits and approvals. Another area where benefit is seen is that the local businesses would be able to sell their goods and

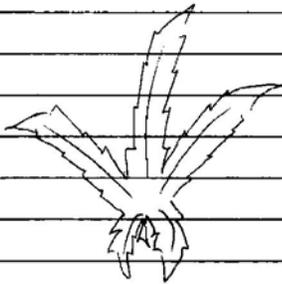

services during both the construction and operational periods. Volume 6 of the Draft EIS describes the existing utilities and infrastructures on Guam as well as the proposed actions that would provide the capacity needed for the additional population. Each utility is covered and for each one, the preferred actions (to achieve adequate capacity) are identified. In some cases, additional capacity with better treatment (i.e., wastewater) is being proposed. Roadways essential for the buildup would be improved, widened, and some bridges replaced by funds provided under the Defense Access Road (DAR) program.

**I-420-002**

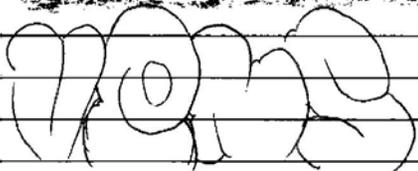

Thank you for your comment. The DoD, along with the Guam State Historic Preservation Officer and many other consulting parties including the public to mitigate indirect and cumulative impacts to historic properties in a number of ways. For example, a historic property inventory survey of the Haputo Site (Site 08-0007), updates of preservation plans for Haputo and Pagat/Marbo Cave Sites (Sites 04-0021, 04-0022, 04-0024; 04-0642), interpretive and informational signage for Latte Stone Park (Site 08-0811), publication of a Guam synthesis written for the public audience, and producing a Cultural Landscape Report for Military Installations located in northern Guam. For Tinian, indirect and cumulative impacts mitigation includes updating the Navy's self-guided historic resource tour pamphlet, thematic synthesis publications focusing on Camp Churo, Japanese Farmsteads, and West Field, and a Cultural Landscape Report for the North Field National Historic Landmark. The PA also includes site-specific data recovery excavations as mitigation for adverse effects on eligible archaeological sites.

I-421-001

I say no to the military build up  
why bring more violence and rapes to  
Guam.

go green

**I-421-001**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-422-001

I'm a resident of JPTorres AS or GuHS  
I don't agree with the military  
move to Guam. And that is because  
bills might be brought up - example  
stuffs are gonna get expensive  
and even worse families are going  
to be living on streets and maybe  
people on Guam are all going to  
get poor.  
Its not gonna ~~get~~ only affect  
one persons family but all the  
people on the island of Guam.  
SO I say NO  
If its and election  
between money and trees  
I'd prefer trees. Because  
I can live from having trees  
Money wouldn't take me anywhere  
Because it comes and go.  
SO NO I don't want thing like  
More Militaries coming to Guam  
Whats wrong with the number  
of military living on Guam today.

#### I-422-001

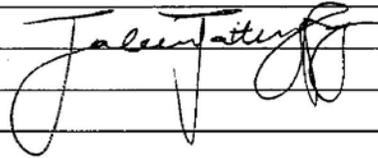

Thank you for your comment. Relating to cost of living and the proposed military buildup, it is noted that the history of inflation and recession of Guam's economy from the 1970s to present was provided on page 3-47 of the Socioeconomic Impact Assessment Study (SIAS). In subsection 4.3.1.4 (beginning page 4-10) of the SIAS, the subject of impact on the standard of living is addressed, stating: "Standard of living is a measure of purchasing power. If the standard of living increases for a person it means they can purchase more goods and services. If the standard of living declines for that person, he or she can purchase fewer goods and services. Changes in a person's standard of living are determined by their income and the prices of the goods and services they tend to purchase. A person's standard of living will increase if their income rises faster than the prices of goods and services they tend to purchase. A person's standard of living will decline if the prices of goods and services they tend to purchase rise faster than the person's income. In both the construction and operational components, the average wage of workers would increase as a function of greater demand for labor. However, the price of goods and services purchased by individuals would rise as well. It cannot be definitively predicted whether wages or the price of goods and services would increase at a faster pace. If wages earned by a particular household rise more quickly than the price of goods and services, then the standard of living would increase. If the price of goods and services rises more quickly than wages, the standard of living would decrease. For households on fixed incomes, the result would be reduced purchasing power. Those with the ability to quickly renegotiate their wages will have a better chance at maintaining or increasing their standard of living." On page 4-11 of the SIAS, the discussion continues and discusses the income of military related construction and operational jobs that will, on the average, be higher than the present average wages on Guam. It concludes: "In terms of cost of living, from 2000 to 2008 Guam workers have seen their standard of living decline by 30% and there is no reason to expect the military buildup to reverse that trend -

Guam workers will likely to continue to see the cost of goods and services rise faster than their incomes. While the proposed action may not represent a reversal of this trend, it will slow the rate of decline in the standard of living that has been prevalent since 2000."

I-423-001

Jan. 21. 2010!

All i want to say is that i honestly think all  
this military stuff is so not even necessary! I  
mean why put them here? OUT OF ALL PLACES,  
why our island? Its our island, ugh. Im irritated,  
honestly. I dont care anymore. YOU! Whoever you  
are thats putting them here, your heartless  
& self-centered!

I-423-001

Thank you for your comment.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 353

Received: 2/3/2010 12:36:19 AM

Gentlemen:

One of the potential activities that will bring about a win-win result for both the U.S. Military and the local community or the islands is to integrate the respective needs. For example, the military may be using the airport on Rota for training purposes for their pilots and at the same time provide needed transportation of agricultural produce that the military at their base need for their consumption. The present procurement system in place is a disadvantage for the Rota farmers as they need to pass through middle man who mainly caters to big corporations or suppliers from overseas. Additionally, the freight cost from Rota to Guam is prohibitive at .55 cents per lb.

In the late 60's and early 70's the U.S. military buys directly from the farmers on Rota and at the same time provided the needed transportation for those agricultural produce that they consume at the base. Bringing back the past practices will promote and enhance good relationship between the community and the military. Additionally, food production is one of the national issue as Nationally Food Security is part of the security agenda of the nation. Promoting agricultural production of the region is in line with the National Food Security intention.

This idea of purchasing directly from the Rota farmers through the existing cooperative organization already in place will also contribute directly to the economic welfare of the island. Rota is at a disadvantage that is why farmers are very hesitant to produce. Given the opportunity, a green revolution will be in order to supply the military with ample produces i.e. cucumbers, bell peppers, tomato, head cabbage etc. as proven in the past.

Gilroy California used to be the garlic capital of the U.S. but importation from China changed that title. The U.S. community should be benefited by the military in the are and one of those benefits can be agricultural production for military consumption. This will build a better relationship and one that will be a win win activity for both the community and the military as they transport produce while conducting routine exercise.

**I-425-001**

o.k after reading this, it is 100% proven that the u.s. military knows the outcome of what it is about to do to guam. It will kill guam and make itunhabitable in the long run.

**I-425-002**

How can the military make the same mistake they made in the 80's and make it worse. You will destroy the scuba tourist industry wich the island relies on for the people of guam.

**I-425-003**

The u.s.a. is supposed to protect the longevity of its interests like they protect hawaii.Who will step in and perserve the quality of life in guam like they would do for any other tourist attraction.

**I-425-004**

Guam is filled with beautiful people and a loving culture. when and if this happens. you will loose that and make everthing it stands for die.

I was thinking of moving my family there this year but i have changed my mind. It will no longer be the most beautiful place in the world.

**I-425-001**

Thank you for your comment.

**I-425-002**

Thank you for your comment. Volume 4, Chapter 16 of the Final EIS acknowledges that there could be impacts to ocean based tourism within Apra Harbor including diving. However, economic impacts to tourism would be somewhat offset by increased tourism from military personnel.

**I-425-003**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

**I-425-004**

Thank you for your comment. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-426-001

My thought on the buildup is a thought that brings mixed feelings to me. The buildup will be a big benefit our island. In my mind a majority of the feelings are negative. Our CULTURE and environment could be in serious jeopardy. Our people should protest when the buildup happens so we can show soldiers that we are not going to stand by and watch our island just slowly die, we need to fight and protest until a agreement is made to not destroy the future of our culuture.

#### I-426-001

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-427-002

I Cesario B. Laroco Jr., requests an extension for the review and public commenting period for the DEIS, 10,000 pages in 90 days is too little time for more people to read and understand the impacts resulting the build up. the document understated but blatantly states numerous environmental, economic and social consequences of the military's decision to move about 40,000 marines, dependents and foreign workers. the draft obviously states that Guam is unprepared for such a large and fast development. And from what i heard, the military and US federal government is doing little to address these serious repercussions of the build up. the money proposed to be invested, is too small of an amount to prevent the stated problems resulting it. placing such a huge force on a small island which doesn't have much any choice for itself or choosing president.

hope you would listen to our pleas, we know the federal government never did.

thank you

**I-427-001**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**I-427-002**

Thank you for your comment. I-428-001

The DEIS claims that the rate of AIDS cases on Guam will increase by only 1 per year, even in the peak period.

What research methodologies were employed to determine this number?

Also, what research methodologies were employed to estimate the increase in TB and STDs, particularly in light of the likelihood that many of the contract construction workers will be coming from areas in Asia with higher rates of TB, STDs, and AIDS?

What is the estimate for cases of Swine Flu, Avian Flu, and other potential epidemic diseases on Guam due to the in-migration of large numbers of people?

What public health measures will DoD put into place to ensure that Guam is protected from the spread of epidemic diseases?

The DEIS claims that the impact on public health is "not significant" -- I challenge that analysis, because on a small, self-contained island such as Guam, one epidemic can have cataclysmic consequences. The risk to the people of Guam from epidemic diseases and communicable diseases is significant.

To mitigate against such possibilities, DoD should conduct thorough health screenings of all laborers coming to Guam, screening them for STDs, TB, HIV-AIDS, swine flu, avian flu, and all other serious health deficiencies.

Further mitigation should include medical treatments for all in-migrants at Navy Hospital or other military health facilities.

### I-428-001

Thank you for your comment. Volume 2, Section 18 specifies that potential public health and safety concerns (for notifiable diseases) were addressed based on anticipated changes in the population of Guam, both from natural increases and from population growth created by implementing the proposed action and alternatives. The Guam average per capita incidents for notifiable diseases were used to calculate the potential increase in these incidents as a result of implementing the proposed action or alternatives. Using the average per capita rates for notifiable diseases on Guam, the potential increase in disease occurrences was estimated based on the natural increase in population and the anticipated arrival of military personnel and their dependants. The construction workforce visiting Guam from other countries to support construction requirements (peak construction force of 18,374 in 2014) would also have the potential to contribute notifiable disease incidents during the construction period (2010 to 2016). The specific countries and the number of construction workers that would arrive to support development of Guam is highly speculative. During the peak construction period (2014), the construction workforce visiting Guam from other countries would have the potential to contribute 76 cases of STDs and 7 cases of TB annually. Based on the estimated number of workers coming to Guam, the annual number of AIDS cholera, dengue, Hepatitis C, malaria, measles, rubella, and typhoid fever cases is not anticipated to increase and would remain at about one case annually.

Volume 2, Section 16 specifies that the DoD would rely on construction contractors, who have significant expertise in the areas of workforce housing and logistics, to support temporary foreign workers. Contract provisions would include requirements to provide workforce medical, dining, transportation and safety/security. There would also be health screening of all workers to reduce health risk to the Guam population. Contractors would be required to provide health care either by supplementing local Guam staff and resources or building their own

clinic.

Workforce housing would be provided by the contractors as described in Volume 2, Chapter 16, "Socioeconomics and General Services." DoD would not provide workforce housing, but design/construction contracts would require the contractor to accommodate the workforce in accordance with specified health and safety standards. Various proposals are being developed by potential contractors in anticipation of winning a contract. The timing and location are unknown for construction and/or renovation of housing to accommodate the construction workforce, but it is possible that some of the workforce housing projects would begin independently of DoD's Record of Decision.

There are no plans to allow contractors to locate workforce housing on DoD-controlled land. Therefore, it is anticipated that should workforce housing needs require the construction of new housing, such workforce housing would be located on either private or Government of Guam lands. In either instance Guam officials would control the underlying land use and permit decisions associated with the siting of such housing. DoD would work with Government of Guam land use and natural resource officials to identify any contractor plans or efforts to construct workforce housing and DOD shall ensure that contractors are informed of their responsibilities to comply with Government of Guam land use restrictions. In particular, the Guam Land Use Commission recently issued GLUC 2009-1 which specifically addresses the issue of zoning for workforce housing.

Disease and epidemics occur as a result of the interaction of three factors, agent, host, and environment. Agents cause the disease, hosts are susceptible to it, and environmental conditions permit host exposure to the agent. The key to prevent the spread of an illness is maintaining good personal hygiene and keeping the environment around living areas clean. Construction workers would be one host to bring disease to the island. Another contributor could be the over 1.2 million tourists that visit

Guam each year. Guam has designated emergency funds for all forms of disasters, including disease outbreaks.

**I-429-001**

Hi! My name is Jolie Vilorio-Palomo. I'm 10 years old. I'm in the 5th grade. I go to Agana Heights Elementary School in Guam. I like to hang out with my brother Keoni.

I went with my Daddy and Papa to Southern High and Yigo hearings. I also went to Yigo for Congresswoman Bordallo. I saw my Papa speak at Southern High, and at Yigo with Congresswoman Bordallo. I learned that my little cousin Antonio Duenas will not grow up and see his ranch because they're gonna take it away. I'm sad for Antonio.

**I-429-002**

My first question. How come they have to do the buildup in Guam? Guam is a very good island. Guam has a great ocean. Guam has nice plants. Guam has a nice culture, like Chamorros, and other nationalities.

**I-429-003**

**I-429-004**

My second question. Can they do the buildup in the United States? The buildup will destroy the Green Sea Turtle, the Spinner Dolphin, and the Hawksbill Sea Turtle. If they move it to the United States, they don't have to take away my cousin Antonio's ranch.

My third question. Can President Obama sign the paper? I learned that when my Papa asked that question at Southern High. I'm glad he's coming here in March. I hope I see his daughters.

**I-429-005**

My fourth question. Why are they going to block Mt. Lamlam? I don't want them to use it to fight wars.

Sincerely, Jolie. My phone number is 477-2500.

**I-429-001**

Thank you for your comment.

**I-429-002**

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the DEIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the DEIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the FEIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria. The West coast of the U.S. was also reviewed as a possible location for the relocation of the U.S. Marine units and the transient pier for the nuclear-powered aircraft carrier. The response times to potential threats were too great. Volume 1 of the Environmental Impact Statement provides greater details regarding the considerations relating to the selection of Guam as the site for the proposed actions.

**I-429-003**

Thank you for your comment. The proposed action on Guam will not

significantly impact sea turtles or dolphins. The DoD has worked with local agencies on Guam for years identifying and protecting sea turtles and their nesting beaches, and spinner dolphins in the nearshore waters on Guam, including Apra Harbor. The Navy has co-existed with sea turtles in Apra Harbor for over 60-years and currently has standard operation procedures, mitigation measures and BMPs that are identified in the EIS, which consider federally protected species and their well-being. The Navy will also implement mitigation measures and BMPs during in-water and land-based construction activities (i.e. dredging and wharf construction). Additionally, the Army Corps permit will require measures to protect biological resources, including water quality. These measures may include the following: biological monitors on vessels (making sure sea turtles and dolphins [although rare in Apra Harbor] do not approach the area); halting of dredging activities, if these animals enter the buffer zone, until the sea turtle and/or dolphin voluntarily leave the area, low lighting, and joint Navy/Guam Resource Agency monitoring of nesting beaches though out Guam, to name a few. Additionally, the DoD as part of the "build-up" on Guam, has also proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam.

**I-429-004**

Thank you for your comment.

**I-429-005**

Thank you for your comment. DoD understands and recognizes the significance of access to cultural sites located on DoD property in Guam. Restricting access to certain areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to Mt. Jumullong Manglo (including the Mt. Lam Lam trail) consistent with safety and operational requirements. Final plans concerning access to

Mt. Jumullong Manglo (as accessed by the Mt. Lam Lam trail) have not been developed, DoD looks forward to working with stakeholders including groups that use the area for traditional religious activities to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of this site.

I-430-001

please don't take away our  
Island beauty and please  
don't kill our wild ~~life~~ life.  
Stop trying to sell our  
Island out, think of the future  
not the money.  
we want to keep our  
historical places.

**I-430-001**

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. As with all industrial-type operations such as those being performed by the DoD, there are various chemicals (e.g., hazardous materials/wastes) that may be used. However, when feasible, the DoD is committed to reducing or eliminating the use of various hazardous materials/wastes to the greatest extent possible and substituting them for less toxic substances. When using hazardous materials/wastes, environmental laws and regulations (e.g., Resource Conservation and Recovery Act or RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. These and other actions will protect public health, welfare, and the environment from adverse impacts and preserve the beauty of Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 359

Received: 2/4/2010 5:12:07 AM

I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam

#### I-431-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-432-002 |

What would prevent the military build up from doing all of the proposed things without public agreement? On 5.9.2 the long-term effect of the Marine biological resources, "the long-term productivity of marine biological resources may be compromised.", don't you people have any compassion for the people of the sea. We live off of the water, our recreation is around us and you would compromise our lives, our existence here for your air strip, or training facility? There have to laws about this sort of treatment and you guys know it and all the permits and compensation talk is not going to change the fact that YOU ARE GOING TO KILL OUR RESOURCES! THE LITTLE WE HAVE YOU WANT IT ALL. THE PEOPLE OUT THERE WHO APPROVE OF THIS ARE IGNORANT. TO JUST COMPROMISE OUR LIVELIHOOD, DISRUPT OUR LITTLE RESOURCES!?! I HAVE NEVER HAD ANYTHING AGAINST THE MILITARY BECAUSE I KNOW THE IMPORTANCE OF FREEDOM AND IT NOT BEING FREE BUT YOU WILL ANHILATE OUR WAY OF LIVES BY RUINING OUR WATERS. YOUR MEASURES ARE NOT 100 PERCENT FULL PROOF AND YOU KNOW IT. ALL OF THE EFFORTS TO CONSERVE ENERGY AND SAVE THE PLANET MUST NOT CONCERN YOU PEOPLE BECAUSE UNLESS IT IS YOUR PEOPLE AND YOUR PROPERTY, LIVES DO NOT MATTER. MINIMIZE THE AMOUT OF MILITARY NEEDED TO MOVE, THERE ARE 50 STATES TO CHOOSE FROM. DEAL WITH WHAT YOU HAVE AND DO NOT COMPROMISE OUR WATERS FOR YOUR WARS. WE DID NOT ASK YOU TO "SAVE US", YOU NEED US MORE THAN WE NEED YOU. We are people of the land and sea, money does not always sustain us. Most of us still farm and fish to support our families and do not know war as a way of life.

#### I-432-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

#### I-432-002

Thank you for your comment, which focused on how Guam was chosen for the military relocation, rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international

and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Website Comment Number: 361

Received: 2/4/2010 1:45:02 PM

I-433-001

None of the alternatives, except for the NO ACTION ALTERNATIVE, listed in vol.4 regarding the air craft berthing / destruction of the reef system at Apra Harbor fully evaluate or attend to the issues of the endangered or threatened species that inhabit that area nor their cultural importance. The Western and Jade Shoals, prime snorkeling areas in Apra Harbor's Cabras Island are among healthy and thriving reef in the proposed area for the air craft berthing. The harbor is the only protected, deep-water lagoon environment on Guam, and hosts unique reef organisms as well as unique assemblages - or groupings - of corals, and other reef organisms. Many species of corals, sponges, and other reef organisms have been found that are rarely - if ever - found outside the harbor. The Green Sea Turtle and the Hawksbill Turtle (both species are endangered and therefore protected under the Federal Endangered Species Act of 1973), or "Haggan" in Chamorro, is known to migrate and reproduce in Sasa Bay, adjacent to Apra Harbor, sharing a common mouth. The proposed dredging itself and as well as the increased traffic and activities in and around Apra Harbor would greatly disrupt the Green Sea Turtle's and the Hawksbill Turtle's activities and reproductive patterns. Also, the Humphead Wrasse, or "Lagua" (for juveniles) & "Tanguisson" (for large adults) in Chamorro, are commonly found in the Apra Harbor. The Humphead Wrasse is a U.S. National Marine Fisheries Service Species of Concern because though it is long lived (Individuals become sexually mature at 5 to 7 years and females are known to live for around 30 years whereas males live a slightly shorter 25 years.), it has a very slow breeding rate and because it faces extinction due to habitat loss and degradation among other threats. The Humphead Wrasse is also on the IUCN Red List of Threatened Species, identified as endangered; the International Union for the Conservation of Nature and Natural Resources (IUCN) is the world's main authority on the conservation status of species. These species are very important to the Chamorro culture both as a food source and as animals of Chamorro mythology - they, and the entire Apra Harbor are indigenous resources. The military's proposed action in Apra Harbor would be detrimental to the survival and reproduction of these endangered species as well as many other species that are yet to be studied closely. Therefore, there is no other acceptable alternative but the NO ACTION ALTERNATIVE.

#### I-433-001

Thank you for your comment and concern for coral reef ecosystems. The location of the proposed Navy wharf was chosen as the least environmentally damaging alternative in an effort to avoid the greatest amount of live coral in the area. The proposed dredge area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging has continued. The proposed dredge area consists mainly of a sand, rubble, and algae zone. Since the proposed wharf location is in an area relatively devoid of quality coral habitat, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. Direct impacts of dredging to the shoal areas within Apra Harbor (Western Shoals, Middle Shoals, Jade Shoals, and Big Blue Reef) will be avoided. The indirect impacts (from sedimentation) to these areas from in-water activities will also be avoided based on computer tide/current modeling performed within the project area (see Figure 11.2-3).

The proposed action within Apra Harbor (an active commercial and DoD port) has been evaluated in the DEIS and will not significantly impact the federally protected green or hawksbill sea turtles with implementation of mitigation measures. The Navy currently implements standard operation procedures, mitigation measures and best management practices (BMPs) that consider federally protected species and their well-being. The Navy has co-existed with sea turtles in the Harbor for over 60-years. The Navy, in partnership with National Oceanic and Atmospheric Administration (NOAA) and Guam Department of Aquatic and Wildlife Resources (DAWR), monitors sea turtle activities within Apra Harbor and around Guam. There are no records of sea turtles nesting on beaches near the proposed project site within Apra Harbor that would potentially be impacted by the proposed action and there have been no reported observations of sea turtles grazing within the area to be dredged.

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations. Additionally, the DoD, as part of the military relocation on Guam, will participate in the proposed upgrade to the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 362

Received: 2/4/2010 2:09:57 PM

In regards to Vol.4 and it's proposed action of dredging Apra Harbor in any way and it's increase in traffic, I demand the NO ACTION ALTERNATIVE. I refer to my earlier comment and would like to add that the "mitigation" of creating an artificial reef is irresponsible, to say the least. The theories of artificial reef systems for the purpose of "mitigating" extensive reef damage have not been adequately studied and are still the topic of sore debate. Many marine biologists dispute it's effectiveness in such a situation as the above, stating "Artificial reefs are no replacement for natural reefs or for proper fisheries management, and we don't want people to view the oceans as a dumping ground for our wastes" (Jack Sobel, director of Ecosystem Programs for the non-profit Ocean Conservancy). "The Alabama Department of Conservation and Natural Resources, which sunk 100 obsolete combat tanks in 1994, would seem to agree. The agency now estimates that most of the artificial reefs they created in doing so will probably last no longer than 50 years. Sobel believes that such short-lived structures may threaten fragile marine ecosystems as they break up and scatter."(<http://www.artificialreefs.org/Articles/Pocono>)

Additionally, in regards to my earlier submitted comment, the Humphead Wrasse is a natural predator of the crown-of-thorns starfish, an aggressive and invasive species to the local area which literally eats away at the reefs surrounding the island. Also, my comments about preserving the endangered species that live in and around Apra Harbor apply to the entire Marianas Island Chain, including Tinian. I demand a NO ACTION ALTERNATIVE for this whole area.

#### I-434-001

Thank you for your comment. A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations. The No Action Alternative is not a feasible alternative because it does not meet the purpose of and need for the proposed action.

I-434-001

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 363

Received: 2/4/2010 8:26:35 PM

The DEIS proposes to close off access to the FAA area, in particular the trail [road] that is used for walking and jogging. ["The former FAA housing parcel is mostly undeveloped with the exception of some apparent temporary use. There is a trail that traverses the property in the westward direction from the existing parking area on the parcel near Route 3. The parking area is likely used by persons who visit the site for jogging and/or walking purposes in the mornings or evenings when the weather is relatively cooler." [Volume 2, Chapter 9, Recreational Resources, page 9-4]

Regarding restricted access, the EIS states, "Upon completion of construction activities, the use of the existing trail on-site would likely be lost, replaced instead with family housing and community support facilities.... However, it is worth noting that the resource lost due to the proposed action is not unique to the region; comparable resources (e.g., jogging and walking trails) would be available in the adjoining properties. Therefore, Alternative 1 would have less than significant impact on the recreational resource at the former FAA parcel." [Volume 2, Chapter 9, Recreational Resources, page 9-18]

Given Guam's astronomically high rates of diabetes and obesity, in addition to the lack of safe areas to walk on the island -- due to a lack of sidewalks, and very few park areas, especially in the densely-populated northern villages -- the loss of this resource would have significant impact. What is the price of people's health and lives? The use of this area for walking and jogging has been critical in improving the quality of life for those who use the area.

Therefore, I propose the NO ACTION ALTERNATIVE.

Secondarily, I propose that the FAA area be gated off closer to the cliffline, preserving the walking area for those who desperately need a place to safely exercise.

The proposed mitigations do not replace the walking trail, and are, therefore, inadequate. If one trail is lost, then another should be created in its place = that is true mitigation.

As a form of mitigation, if the FAA area is indeed closed off, the DoD will fund the construction of a paved walking trail in the Dededo/Yigo area, comparable in size and scope to the FAA walking trail. This would be a way to responsibly acknowledge that the DoD is living up to its responsibilities dictated in NEPA.

#### I-435-001

Thank you for your comment. Presently, no mitigation measure is proposed for the loss of jogging/walking at the former FAA property because equivalent use can be found in adjacent properties.

1           **COMMENTS BY MR. BENIGNO MAGOFNA SABLAN**

2  
3           MR. SABLAN: For the record, my name is  
4 Benigno Magofna Sablan. I'm from the village  
5 of Tanapak here on Saipan. I am part  
6 Carolinian, part Chamorro and no Caucasian  
7 descent. I'm here tonight to express my  
8 concern primarily for the CNMI. But as a  
9 fisherman here in CNMI, I noticed that there is  
10 dredging for the visiting aircraft carrier in  
11 the Apra Harbor in Guam, as the colonel had  
12 already elaborated.

13           My concern is that, that statement is  
14 very generalized. I don't know what they're  
15 going to do with the dredge material. Are they  
16 going to dump it in our fishing area? Are they  
17 going to dump it on the land? What are they  
18 going to do with this huge volumes of dredge  
19 materials? That's a very deep concern because  
20 wherever you drop, whether it's 12 nautical  
21 miles outside of Guam, eventually it will be  
22 all over the Marianas EEZ, that's the Exclusive  
23 Economic Zone. They will affect benthic  
24 species, affect meso-benthic species, as well  
25 as pelagic species. So, those are concerns

**I-436-001**

Thank you for your comment. The DoD is considering several options for disposal of dredged material, including upland placement, ocean disposal, and beneficial uses such as shoreline stabilization, fill for berms, and fill for the Port Authority of Guam, as discussed in the EIS (Chapter 2, Volume 4). Using dredged material for beneficial reuse projects would depend upon the suitability of the material for these projects as well as whether the proposed action timeline coincides with the need for material for a reuse project. Detailed analysis cannot be done at this time because specific projects have not yet been identified with certainty. While beneficial reuse is a priority for the DoD, the final decision on dredged material management will be made during the final design and permitting process. Detailed analysis of the potential impacts from using dredged material for reuse projects will be conducted during the permitting phase.

I-436-001

I-436-002

1 that I want to point out.

2 Second concern, is the military is

3 notorious for polluting the environment. I

4 don't hear any concern of the military whether

5 they are going to mitigate as much of the

6 pollution that is going to occur in both the

7 CNMI or the Marianas as well as the land. I

8 wanted to know specific areas where the Draft

9 EIS indicate those particular section where we

10 should, really specific, to those areas,

11 whether in fact they will clean their

12 environment as they let their bullets go on

13 Tinian as well as on Guam.

I-436-003

14 The other concern is that, I didn't

15 hear whether it's in the DEIS or in their

16 presentation, whether they are going to propose

17 for air space requirement. And if they do, I

18 want to know specific area whether there's

19 going to be a DEIS for the air space from

20 surface to how many altitude, whether to

21 infinity, and we have specific concerns on air

22 space either for Tinian, Saipan, and Pagan. I

23 also did not hear any proposed discussion about

24 whether Pagan is going to be included in these

25 military relocations of both the Army, and the

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-436-002**

Thank you for your comment. Volume 7, Chapter 2 summarizes the proposed mitigation measures and Best Management Practices (BMPs) that are mentioned in Volumes 2 through 6 under the various resource sections. The intent of mitigation measures and BMPs is to avoid minimize, reduce, eliminate or compensate for potential impacts due to the proposed actions. The list was updated based on comments received during the public comment period and will continue to be updated after the Final EIS is published during agency consultation and construction permit application processes.

A firing range management plan is required and it has many components to mitigate impacts to the environment including a plan to remove expended rounds from the ranges periodically and transporting them to a recycling or smelter facility.

**I-436-003**

Thank you for your comment. The proposed action and alternatives for Special Use Airspace are covered in detail in the DEIS Volumes. Location, altitudes, and times of use would be coordinated with the Federal Aviation Agency (FAA). The FAA will also be responsible for approving and charting any Special Use Airspace (SUA). This will require the FAA to follow established procedures for Rule-Making actions, which involves public input for establishing new SUA to ensure there are minimal impacts to airspace.

I-436-003

1 Navy, and the US Marines. I still wanted to  
 2 know more specific areas of concern for our  
 3 areas. We all know that the island of Guam is  
 4 probably the biggest here in the Marianas, the  
 5 rest are very small. We compared Saipan to  
 6 Guam, so I think Guam is four times bigger than  
 7 Saipan. I guess, what I'm trying to point out  
 8 is that we don't have the real estate that the  
 9 military want to utilize. And if we cannot  
 10 accommodate the needs of the military both on  
 11 land, would they now take the air space? I  
 12 guess I'll let somebody else -- additional  
 13 comments, I have others but I'm not prepared to  
 14 talk at this time but I hope to come back again  
 15 or put a written comment for everybody. Thank  
 16 you so much. Have a good evening.

1                   **COMMENTS BY MR. RICHARD SEMAN**

2

3                   MR. SEMAN: All right. Thank you. My

4 name is Richard Seman, I'm from Saipan. I've

5 been involved with Natural Resources Management

6 for over 20 years. And I would like to express

7 some of my concern with regards to the DEIS,

8 with regards to fishing. There needs to be a

9 stronger emphasis from the military with

10 regards to fishing access whether it's Guam or

11 Tinian. As military expands, we understand

12 that with military presence there's restricted

13 area, it impedes on traditional fishing ground.

14 And you know, it's a new conflict that as we

15 progress in our world, you know, with terror

16 and everything, but the military or the DOD

17 needs to be a little bit more mindful and be

18 considerate in the ways that they plan ahead,

19 in how to incorporate and how to take into

20 consideration those types that are not, we're

21 not familiar within how to coexist. Because

22 this is a new expansion for the military

23 especially in Tinian, it's important that

24 fishing grounds are well assessed, identified,

25 and proper access are put in place.

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-437-001**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-437-001**

1 With regards to the Guam buildup, I  
 2 understand also as Mr. Sablan elaborated on the  
 3 dredging of Apra Harbor, I was privy to some of  
 4 the previous scoping meeting that took place on  
 5 Guam, and at least from what I understand, it  
 6 concerns me that the plan dredging is to take  
 7 the dredge material out to a certain distance.  
 8 There's two area that's identified where  
 9 they're going to actually just dump. And  
 10 there's more analysis needs to be made to show  
 11 actually the way the dredge materials will  
 12 drop, you know, because you know, we can go to  
 13 all kinds of simulation but until actual drop  
 14 are made on a test run, we'll be able to  
 15 determine just what kind of spread the dredge  
 16 material will cost.

I-437-002

I-437-003

17 A lot of us were not privy to the  
 18 result of the sampling, the sampling I  
 19 understand is very minimal compared to  
 20 extensive sampling of the proposed dredge area,  
 21 but it's known and it's documented over the  
 22 past that certain -- things that taking place  
 23 at Apra Harbor, you know, due to different  
 24 circumstances over time, but regardless of what  
 25 it is, it is considered that certain things are

**DEPO RESOURCES**

**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-437-002**

Thank you for your comment. Verification that significant impacts would not occur outside of the site boundaries will be demonstrated through implementation of the Site Management and Monitoring Plan (SMMP) developed as part of the Proposed Action. The SMMP includes physical monitoring to confirm that the material that is deposited is landing where it is supposed to land, as well as monitoring to confirm that the sediment chemistry conforms to the predisposal testing requirements.

**I-437-003**

Thank you for your comment. Sediment samples within the proposed dredging areas were analyzed according to U.S. Environmental Protection Agency and U.S. Army Corps of Engineers testing criteria. As discussed in the EIS (Chapters 2 and 4 of Volumes 2 and 4), preliminary sampling results indicate that all contaminant parameters that were tested with the exception of nickel were below the Effects Range Low (ER-L) level. Nickel is a substance that is naturally occurring in the environment. The study results suggest that the materials to be dredged would not require special handling and would be suitable for upland placement for beneficial reuse or ocean disposal (although the ocean disposal permitting process would require separate analysis and toxicity testing). Additional testing will occur during the permitting process and a dredged material management plan will be developed.

I-437-003

1 harmful, toxic, and all that.

2           And so, when the actual dumping, if the

3 proposed plan proceed as it is to take it out,

4 I don't know, 12 miles out and then open a

5 barge-type vessel and then let everything drop

6 down. We have to be extra careful on that

7 because once it's done, it's done. I mean it's

8 hard to retreat back something that you already

9 spilled out.

10           And so, I urge the military or

11 Department of Defense in proceeding forward

12 with their eventual -- whatever eventual thing

13 that they would put in place to perform the

14 dredge material that extra-caution is put in

15 place, and let's not regret it later on. Thank

16 you.

I-438-001

1                   COMMENTS BY MR. JUAN M. SABLAN

2

3                   MR. SABLAN: My name is Juan M. Sablan,

4 I'm from Saipan. I came to this hearing today

5 to share my concerns specifically not on the

6 impact study but the concerns here in Saipan

7 about the military buildup. After World War II

8 there are a lot of debris still in the island,

9 PCP and fuel tanks, if the military can -- this

10 group can help, perhaps, to have better public

11 relation with the local people here.

12                   Another concern is that perhaps the

13 military can look into feasibility of using the

14 thermal energy in Pagan, study that and maybe

15 extend that to Guam, from Saipan to Guam, so we

16 can have benefits. The military need a lot of

17 powers and it's a free power and eco-friendly.

18 So, maybe they can also address that issue.

19 Other than that, I would like to look at the

20 impact statement study and comment by email;

21 send it over to Guam or main office for that in

22 the later day before the deadline. Thank you

23 for your time and welcome to Saipan. If Guam

24 doesn't want military, maybe we can move some

25 of the action to Tinian and Saipan. Thank you.

COMMENTS BY MR. MARTIN MANGLONA

1  
2  
3 MR. MANGLONA: Good evening. My name  
4 is Martin Ada Manglona. I came from the  
5 village of Kagman. Tonight I came here not to  
6 make any zero comment because I didn't see this  
7 yet until I reviewed this then I'll make a  
8 comment. But talking to Colonel and General  
9 Bice, the only observation I have is the  
10 airspace in Tinian. Because where they're  
11 going to put the range, I think it's in a safe  
12 zone where it's least backed by the military.  
13 And it reminds me like in Monterey California  
14 that during the range days, the range is right  
15 by the base and we got a lot of fishermen.  
16 But, talking to General Bice, I understand  
17 they're going to build a berm, that will build  
18 on a safety area on the installation, so I  
19 think that will be not an issue after the range  
20 is completed. But the airspace we have almost  
21 every hour of the aircraft from Tinian to  
22 Saipan vice versa flying around, so, either  
23 they're going to divert the airspace or FAA is  
24 going to detour the route, those are the main  
25 concern.

I-439-001

**I-439-001**

Thank you for your comment. Airspace related to the Tinian firing ranges is described in detail in Volume 3, Sections 2.4 and 7.2.2.1. No airspace changes are required in support of the proposed action. The Marine Corps would manage the airspace overlying the proposed ranges to ensure safety of nonparticipating aircraft. The need to change existing approach or departure routes or traffic patterns for Tinian Airport (West Field) or Saipan International Airport is not expected.

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-439-002

1           But, looking on the plans that you have  
2 on the board, I think we're pretty safe on the  
3 -- because what I understood is just a range  
4 they're going to install in Tinian. And the  
5 other recommendation I ask General Bice to take  
6 a look in the northern island for the recon  
7 force because they could use that for good  
8 training. In that way, we do this -- in Europe  
9 they call it reforger (sic) return of forces  
10 agree -- to Germany. Every time any military  
11 destroy a plant or an animal, they assess a  
12 certain plant how much is going to cost. So  
13 for example, a tree of the Betel Nut, you'll  
14 going to estimate how much Betel Nut you're  
15 going to sell so the military will pay for that  
16 amount. If you have a count that is big kill,  
17 you're going to assess how much is going to  
18 produce with the lifespan. So, that's how the  
19 military they call it maneuver damage. So  
20 those are the benefits we have in case we have  
21 destruction by the military. But until I  
22 review the impact assessment, then I'll make my  
23 comment to either to Guam or to Washington.  
24 Thank you.  
25

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-439-002**

Thank you for your comment. Alternative ranges locations shown in Chapter 2 of Volume 3 meet the purpose and need for the proposed action.

1                   **COMMENTS BY MR. TONY L.G. REYES**

2  
3                   MR. REYES: Thank you Mr. Guzman. I'm  
4 going to keep my comment very simple. The only  
5 thing I'd like to discuss here, I don't want to  
6 see the military just come in and like for  
7 example, the Tinian, I'll never forget that 2/3  
8 of the island of Tinian was leased to the  
9 military and a lot of people, including myself,  
10 I was displaced. And like I said, I don't like  
11 the deal.

12                   So, if we're going to go in and acquire  
13 more properties in Guam, Saipan, or Tinian,  
14 wherever you guys want, be fair to the  
15 landowners; because let's be honest it is not  
16 easy to have somebody dictating you, you know,  
17 what to do of your land. It should be a fair  
18 market price. So, I just want to make sure  
19 that from here on, both the military and the  
20 local government have to be very honest and  
21 very fair with the landowners, because like I  
22 said, up to now I'm still, you know, one-to-one  
23 is not fair to be land exchanged. When you  
24 have somebody that land exchange, you know,  
25 one-to-200 that is not fair.

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-440-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

I-440-001

I-440-002

Thank you for your comment.

I-440-002

1           So, let's be very frank and let's work  
2 together because the military, we need them,  
3 okay? Because they're going to bring money  
4 into our local economy. And if we don't take  
5 care of the military, you know, they will not  
6 going to bring in the money unless we -- and  
7 also a lot of our local boys and ladies are in  
8 the military and they are serving Uncle Sam.  
9 So, you know, we have to work together as a  
10 team. See, if you don't have a team, you're  
11 not going to win, believe me. And this is the  
12 only thing as a comment that -- and again like  
13 Mr. Sablan said, Ben Sablan and the other  
14 speakers, we will look at first what is going  
15 to happen, you know, the infrastructure, and  
16 the socioeconomics, and whatever is needed to  
17 be addressed, you know, and let's move forward.  
18 Thank you very much.

19  
20  
21  
22  
23

COMMENTS BY MS. TERESA ARRIOLA

1  
2  
3 MS. ARRIOLA: Hi, my name is Teresa  
4 Arriola, I'm born and raised on Saipan. I'm  
5 from the island -- I mean the village of San  
6 Vicente. I just wanted to -- I know I can't  
7 ask any questions but I guess I'll make this  
8 into a comment. I just want to say despite the  
9 fact that I've read this is one of the biggest  
10 military buildup since World War II, it seems  
11 that every other page in the DEIS says that the  
12 impacts will be "minor" and I don't understand  
13 this, I don't understand why Page 22 for  
14 example, "less than significant impacts to  
15 ground water," this is Volume 3 Chapter 4 Page  
16 22 of the DEIS.  
17 Page 22 again, "no direct impacts on  
18 wetland areas are anticipated." Page 29,  
19 "minor increase in runoff", so I don't  
20 understand how this can be such a big thing and  
21 yet in the EIS claim to have such minor  
22 affects.  
23 I'm also extremely concerned about the  
24 way this buildup is going to not only affect,  
25 negatively affect the island but how it's going

I-441-001

**I-441-001**

Thank you for your comment. As you mention, there are certain activities in certain locations of the proposed actions where the impacts will be minor. However, the EIS also includes statements that identify certain actions in certain locations where the impacts would be significant and proposes mitigation measures to reduce the adverse effects of those actions.

DEPO RESOURCES  
George B. Castro  
Court Reporter  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-441-002

1 to compound, this was in the DEIS "past DOD  
 2 activities that have resulted in the presence  
 3 of toxic and hazardous waste contamination."  
 4 So, I'm not just looking at how is this going  
 5 to affect us now, I'm looking at how is this  
 6 going to compound the already existing problems  
 7 that we are facing on this island and on Guam  
 8 as well.

I-441-003

9 I'm also extremely concerned on how,  
 10 again, the MIRC, which is a completely  
 11 different aside the Marianas Island Range  
 12 Complex, is also compounding all the negative  
 13 effects that currently exist and will exist  
 14 with the buildup. I think we have absolutely  
 15 not been given enough time to read and analyze  
 16 this DEIS at all. I think it would take years  
 17 to read this and really critically analyze the  
 18 things that the military is saying they're  
 19 going to do with our land.

I-441-004

20 So, I really think people need to take  
 21 this, I guess, a little bit more seriously.  
 22 Remember this is our land. We are the  
 23 indigenous people. I guess, lastly, I'd like  
 24 to say that I think the people of the CNMI are  
 25 incredibly capable enough to not have to depend

**DEPO RESOURCES**

 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-441-002**

Thank you for your comment. Please see each volume chapters on Hazardous Materials and Waste for a discussion on DoD hazardous materials/waste management. The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, etc. In fact, when feasible, the DoD works to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting for less toxic substances.

When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs), standard operating procedures (SOPs), and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs, SOPs, and other controls are fully described in the EIS document.

If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have

I-441-004

1 on the military for any type of economic  
 2 support. This is obviously an extremely  
 3 personal issue to me and I think it should  
 4 definitely have been advertised a little bit  
 5 better as well so that -- because I know, I  
 6 mean I'm not just speaking for myself, I'm  
 7 speaking on behalf of many Chamorro people that  
 8 I've spoken to. And I'd like the military to  
 9 take our concerns a lot more seriously. Thank  
 10 you.

11

been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered. These actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

The Draft Mariana Islands Range Complex (MIRC) EIS was released for public review on January 13, 2009. Public hearings occurred on Guam, Saipan, Tinian and Rota in February 2009. The Navy is currently addressing comments and preparing the Final EIS. The Navy has consulted with the USFWS under section 7 of the Endangered Species Act and is currently in consultation with NOAA for potential at-sea impacts. The MIRC EIS addresses DoD training on existing training areas previously identified in the 1999 Marianas Training EIS. In addition, the MIRC EIS addresses Hazardous Materials and Waste management for training. If you would like to review the MIRC Draft EIS please go to [www.marianasrangecomplexeis.com](http://www.marianasrangecomplexeis.com).

**I-441-003**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**I-441-004**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the

Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

1       **COMMENTS BY MS. VICTORIA LOLA LEON GUERRERO**

2  
3           MS. LEON GUERRERO:   Hafa adai.   I am  
4 Victoria Lola Leon Guerrero, I am a resident of  
5 Guahan but I am also from the Saipan family.  
6 My father is a De Leon -- Sablan De Leon  
7 Guerrero from Saipan.   And so I am very  
8 concerned about how all of our islands are  
9 affected.   What happens to Guahan, happens to  
10 Saipan, and happens to Tinian.   And so we have  
11 to believe that we are worth more than just  
12 allowing somebody to come in because they have  
13 big dollars signs that they are waving in our  
14 faces and take our land and contaminate our  
15 lands.

16           Today, I've been here the whole day,  
17 talking with my family, talking with people in  
18 the corner, and people are still remembering  
19 the contamination that happened in Tanapak, a  
20 contamination that's happening weekly in the  
21 bombing of northern islands.   That travels  
22 through the wind and comes into our  
23 bloodstreams and contaminates our bodies with  
24 cancers.   Our people from all our islands are  
25 dying, dying.   We are an endangered species and

**I-442-001**

Thank you for your comment. Volume 2, Section 17.1.2 discusses the laws and regulations that the Navy must abide by during operations to ensure public health and the environment are protected. Hazardous substances are controlled by laws and regulations administered by the U.S. Environmental Protection Agency (USEPA), the U.S. Occupational Safety and Health Administration (OSHA), and the U.S. Department of Transportation (DOT). Additionally, the U.S. territory of Guam oversees and administers its environmental laws and regulations through the Guam EPA (GEPA). DoD installations are required to comply with applicable federal, territorial (e.g., GEPA), and DoD laws and regulations regarding the storage, handling, and disposal of hazardous substances. Cancer research has found that most cases of cancer are linked to environmental causes. Environmental causes include both lifestyle factors such as smoking and diet, as well as exposure to agents in the air, soil, and water. Due to the extensive regulatory requirements of managing hazardous substances and military operations, current and future military operations would not be anticipated to contribute to incidents of cancer.

I-442-001

1 we are dying and this is our habitat. And yes,  
 2 we serve proudly in the military but we can no  
 3 longer be made to beg. We don't need to beg.  
 4 We need to stand up and be proud of who we are  
 5 first. We don't need to make a deal, we don't  
 6 need to say, "Well, let's work with the  
 7 military because they're going to give us  
 8 money," no. This buildup is intended to carry  
 9 out the plans of the Department of Defense  
 10 first and foremost. It is not intended to  
 11 benefit the people of our islands, first and  
 12 foremost. Our priorities are always second and  
 13 history has shown that. We need to stand at  
 14 the front and say, "We must come first." This  
 15 is our land and we must come first because yes,  
 16 our sons and daughters die in their war for  
 17 freedom but we are not coming first in our  
 18 future. And people are losing their land and  
 19 people are drinking contaminated water, and  
 20 dying. And that's not something to be taken  
 21 lightly. And this Environmental Impact  
 22 Statement says that, shows that, it shows that  
 23 our people are going to continue to suffer.  
 24 80,000 more people in Guam, even if it's for a  
 25 short period of time will deplete many of our

**I-442-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam and Tinian, and the islands' natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam and Tinian to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam and Tinian.

I-442-002

1 necessary resources. 2,300 acres of land to be  
 2 taken from families when the military already  
 3 occupies 1/3 of our island, is too much to ask.  
 4 Another firing range in Tinian is going to  
 5 contaminate the land, and it will affect all of  
 6 us because our islands are close. And we're  
 7 divided not because of who we are, we're  
 8 family. I come to this island to visit my  
 9 family. We may have different political status  
 10 but we are all one family and what has divided  
 11 us are the countries that try to rule us. And  
 12 the only way we can take hold of our future is  
 13 if we work together and not continue to say,  
 14 "Oh, if Guam doesn't want the military, we'll  
 15 take them." No, we need to see bigger than  
 16 that.

I-442-003

17 The environmental impacts, you ask that  
 18 we don't talk about politics. You cannot talk  
 19 about your environment without also being aware  
 20 of the fact that you have to be able to control  
 21 it. It is our environment and we must take  
 22 control of that, and we must take control of  
 23 our future. And right now, my biggest concern  
 24 with this EIS and this military buildup is that  
 25 we are not at the table. We are here making

**I-442-003**

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action.

Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

**I-442-004**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the FEIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-442-004

1 comments. Comments are powerless, they're  
 2 being considered and General Bice says, "We  
 3 will consider your comments. They will be put  
 4 in the final decision." But we're not making  
 5 the final decision. None of us are making the  
 6 final decision, they are.

7 So, until we're at that table and it's  
 8 done on our terms, we will not benefit. It  
 9 needs to be in our terms or we will continue to  
 10 die, we will continue to leave our islands, we  
 11 will continue to lose our land, and at the end,  
 12 what will happen to our children and our  
 13 grandchildren? What would they know of being  
 14 Chamorro? What would they know of the  
 15 Marianas, but a military base. So, they've  
 16 encouraged us to offer alternatives. My  
 17 alternative is no action. Enough is enough.  
 18 We have given too much. Thank you.

COMMENTS BY MS. HOPE CRISTOBAL

MR. CRISTOBAL: [speaks in the Chamorro language; I am Hope Cristobal. I am not from here, I am from Guam, I do not stay here on Saipan. I came here because I missed all the meetings on Guam because I was off island. And last night there was two of us that sat there and read what they had and they only dedicate three minutes for this buildup here in the CNMI. If you look at the -- there's no economic development for this place. We found out that they are going to have a firing range up at the military land area in Tinian, two-thirds. We found out that there will be a berm, you need to ask what kind of bullet they will be using because it will have lead, a lot of it and it will stay on the land, the lead. There is a lot of this kind on the land already. That is why the people of the land -- I will tell you that our ancestors, we are here today because they stood up against the Spanish, because they almost wiped them out. That is why we are here now. These people, they don't care about our existence -- we

Thank you for your comment. The DoD is committed to conducting its mission in an environmentally sound manner. With regard to lead use at firing ranges, there are various Best Management Practices (BMPs) and standard operating procedures (SOPs) will be used to ensure the protection of human health and the environment. One such action will be to periodically clean the firing ranges of munitions and explosives of concern (MEC). This action prevent lead being used from leaching into the groundwater.

**I-443-002**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. 1 should wake up the people, warn them, because  
2 where else are we going to go.

3           There was a study in 1985 in Washington  
4 State University, two social scientist studied  
5 the EIS across the United States and found out  
6 that the social impact, and found that the  
7 social impact, there was a lot of issues that  
8 were not looked at -- there's another one in  
9 2008 that we found that the Pentagon and the  
10 EPA were fighting as to who is going to clean  
11 up the mess of the military at Fort Mead and  
12 Fort Detrick in America. They are in court  
13 right now. One government and yet they are  
14 fighting each other because they don't know who  
15 is going to clean the land. And us, who is  
16 going to fight for us in the land, the  
17 Marianas. No one. Our representative can't  
18 even vote up there. We are not even at the  
19 discussion table and this is a big decision for  
20 us. I will tell you that there is a saying  
21 from the American that says "no matter how  
22 gentle the giant is in your living room, he is  
23 bound to break something.

I-443-003

24           So, please listen to what I am saying  
25 because they are saying that it is going to be

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

I-443-003

1 okay. How is it going to be okay when all  
 2 these people are going to come in? There will  
 3 be a big impact on our culture, and our people  
 4 will fall with this buildup. So I ask the  
 5 military to consider the social impact when  
 6 they all come in. There was something that  
 7 came out in the news that said they were going  
 8 to list the concerns of those who are  
 9 concerned. It will be to late to list the  
 10 concerns they find. It is not enough that they  
 11 list it, they should study it seriously. Si  
 12 Yu'us Ma'ase.

COMMENTS BY MR. MARTIN MANGLONA

1  
2  
3 MR. MANGLONA: Let me make a comment  
4 because I think we're being unfair tonight to  
5 see one sided. I'm going to explain, let me  
6 tell your testimony, ma'am, Cristobal, that  
7 Fort Detrick, Maryland, I was there. Let me  
8 tell you the truth, to be fair to this  
9 individual coming in tonight. I spent over 26  
10 years in the military. You talk about ranges,  
11 I was Senior Drill Instructor for seven years.  
12 I've worked with military both, I had a command  
13 of Navy, Air Force, Army, Marines, I had a 77<sup>th</sup>  
14 Command. So, understand what I'm talking  
15 about, don't be scared of all those negative  
16 impact. I wish, if you have a comment, you  
17 should do it in Guam, okay? But what I'm  
18 saying is before we jump into conclusion, let's  
19 see what they have, what to offer because it  
20 affords some opportunity. When I look at the  
21 plans, all the plan in Tinian is for ranges.  
22 They call it small arms range which is for 45,  
23 M16, M16 machine gun, nothing else. They're  
24 not going to be firing a mortar round, either  
25 81, 4.2's. They're not going to be doing -- a

I-444-001

DEPO RESOURCES  
George B. Castro  
Court Reporter

I-444-001

1 small range, we have it here in Kannat Ta Bla,  
2 so, there's no problem. Every end of the range  
3 firing, they do call a police call, so, the  
4 police all the ballistic, everything that's in  
5 there because they're very concerned about the  
6 environmental.

7 You know, let's not get a scared  
8 tactics tonight. Give this chance, these  
9 people a chance to say because it's going to  
10 benefit us. As a matter of fact, I was talking  
11 to General Bice, my main concern is to have an  
12 opportunity for our people to get a contract  
13 for local people, not on outside but local  
14 people, to get a contract, a contractor for  
15 vendors, produce that is built or produced here  
16 in the commonwealth, not bringing in from  
17 another state or from Guam. Those are our  
18 benefits and we're going to have people that  
19 maintain the range from Tinian or maybe from  
20 Saipan, those are the benefit for us. We're  
21 not asking -- not only that but we have an  
22 inherent -- as a citizen. That's why we have  
23 Department of Defense to protect us from all  
24 adversary. And you know, when everything is  
25 going hunky-dore, we got no problem. When the

I-444-002

**I-444-002**

Thank you for your comment. NAVFAC Marianas does award contracts to small businesses and local businesses. NAVFAC Marianas coordinates with the Small Business Administration to determine the capability of small businesses to fulfill contract requirements; however, the particulars of individual contracts related to the proposed action are not part of the DEIS because contracts related to the proposed action are not warranted until the proposed action is approved. Please contact NAVFAC Marianas for general information on small business contracting procedures.

1                   **COMMENTS BY MR. SIXTO K. IGISOMAR**

2  
3                   MR. IGISOMAR: Hello, my name is Sixto  
4 K. Igisomar, K, for Kaipat. I'm 100,000  
5 percent Carolinian, and I'm from almost every  
6 village from the western coast of the Saipan.  
7 Anyway, after hearing her comment I feel like  
8 saying why don't you keep it on Guam. But  
9 that's a joke, okay? I understand that there's  
10 feelings and I'm not -- basically, I'm going to  
11 say that I'm not necessarily favoring it, I'm  
12 not necessarily against it, I'm more of a  
13 neutral ground. And I wanted to make sure --  
14 and for your statement, if you're right that  
15 the giant is, you know, calm, going to break  
16 something, you might as well work with the  
17 giant. If the giant is going to be in your  
18 room, then you work with the giant, find a way  
19 to work with it.

20                   So, I just want to make a few comments,  
21 concerns. The base study, whatever you call  
22 it, scientific, I'm not a real scientific guy  
23 when it comes to environment, I'm more of  
24 economics, and I'm representing myself only  
25 because I don't want to be in conflict with the

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-445-001

1 other agencies I'm with, but just for the  
 2 record. Base study, whatever you're going to  
 3 do, make sure you do your study to understand  
 4 that whatever was there, so that we can  
 5 actually measure, 2, 10, 15, 20, years down the  
 6 line, if anything ever happened, we could  
 7 safely say that you caused it, pay me for it.  
 8 In that way, we understand that we're working  
 9 together.

I-445-002

10 The NEPA, with the fact that you have  
 11 this EIS is, does it involve already or is it  
 12 already qualified that you're saying that it  
 13 passed all NEPA clearance. If you're going to  
 14 go to Tinian, are you just going to go there  
 15 and mow everything down, or are you going to  
 16 try to move that one bird that's preventing  
 17 every environmental project here in the CNMI?  
 18 Projects that we would like to move over in the  
 19 CNMI but we can't because we have to do this  
 20 NEPA study, we have to study this  
 21 environmentally before we start moving forward  
 22 with our projects.

23 So, what I'm saying is, if you are able  
 24 to do this in Guam where you can go in and just  
 25 wipe, excuse the language, not necessarily

**DEPO RESOURCES**  
 George B. Castro

**I-445-001**

Thank you for your comment.

**I-445-002**

Thank you for your comment. Environmental constraints (such as threatened and endangered species) were considered during the siting of the four alternatives. Potential impacts to threatened and endangered species on Tinian are analyzed in Volume 3, Chapter 10.

1 favoring the word, but lack of a better word,  
 2 wipe everything down without the care of any  
 3 environmental impact, then allow us too, the  
 4 CNMI, allow the CNMI Government and I'm glad or  
 5 representative is here, give a waiver to the  
 6 CNMI Government to allow us to start moving  
 7 forward with our projects, millions of dollars  
 8 that are on hold because we can't move forward.  
 9 So, if the military can do it, please allow us  
 10 to move forward as well with our projects.

I-445-003

11           Communications, I understand there's,  
 12 it's true, I think you guys were here a while  
 13 back and I think maybe only few people showed  
 14 up. It is, for me, I favor that the government  
 15 tries its best to work with JGPO in trying to  
 16 advise to public. Two weeks notice, please, I  
 17 ask that you give us a little bit more time. I  
 18 think we have more population of the CNMI here  
 19 -- if you would like to gain favors, you would  
 20 like to work with the majority, don't work with  
 21 the few, don't work with the few, create a  
 22 small list, go in that room like she's saying,  
 23 and making their own decision. Please  
 24 communicate. Communicate with the CNMI people,  
 25 give us time, I don't care if you have to fill

**I-445-003**

Thank you for your comment. The lease requires that notification occurs at one week prior to a training event. Road closures and restrictions to civilian access will be addressed in detail in the Local Range Management Plan that will be developed following the Final EIS to support the operations of any ranges constructed on Tinian.

**I-445-004**

Thank you for your comment.

**I-445-003**

1 up that ad in that newspaper every single day,  
 2 do it because our culture, like she said, a lot  
 3 of us are very complacent. Wake them up. The  
 4 only reason why I think that the CNMI people  
 5 are not necessarily saying I favor it or I'm  
 6 against it is I don't think they are  
 7 necessarily informed. Okay? So, we would like  
 8 to inform them. If you want us to help you,  
 9 help us to help you, keep us informed.

**I-445-004**

10 Use of sharing of resources, if you're  
 11 going to be here already, please, help us with  
 12 our resources. Help us to boost our economy by  
 13 giving you or having you use what we have that  
 14 we can actually use to promote our economy.  
 15 I'm not sure about Pagan but I'm sure there's a  
 16 lot of -- there's a debate on that issue about  
 17 the deposits up there, but if you can actually  
 18 help us use it, mix it with your cements, get a  
 19 better ports where you can park those ships,  
 20 last longer, make use of us to help you, if  
 21 you're going to here already.

22 So, I was saying basically sharing the,  
 23 if you would like us to help you, you got to  
 24 really share that information to us. Before  
 25 you do anything, I agree that a lot of people,

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**

1 I mean, we are all very patriotic, I'll fight  
 2 for Uncle Sam and I will jump in there and  
 3 protect Uncle Sam. But I'm just saying help us  
 4 along the way as well, okay? If you want us to  
 5 help each other, let's be proactive in making  
 6 sure we share those informations.

I-445-005

7 When it comes to contracts, I  
 8 understand that PTAC is down on Guam right now,  
 9 which is helping the Guam with as far as the  
 10 contractors and the military, we would like to  
 11 make sure that you push us well to have that  
 12 form of agency be here in CNMI. I understand  
 13 that we try to get on board to try and gain  
 14 favors to get a budget so that we can bring  
 15 some of those individuals here to help train  
 16 our contractors, we're having problems with  
 17 those already. If you are going to be here  
 18 already and you're going to be building, I  
 19 would really favor that the construction of  
 20 that berm or whatever firing range, that you  
 21 give an opportunity to our contractors. I  
 22 don't care if they're small, maybe \$100,000.00  
 23 less than \$1,000,000.00 equity construction  
 24 company, but bring in your mother ship  
 25 contractor to help them, mentor them, the way

**I-445-005**

Thank you for your comment. NAVFAC Marianas does award contracts to small businesses and local businesses. NAVFAC Marianas coordinates with the Small Business Administration to determine the capability of small businesses to fulfill contract requirements; however, the particulars of individual contracts related to the proposed action are not part of the DEIS because contracts related to the proposed action are not warranted until the proposed action is approved. Please contact NAVFAC Marianas for general information on small business contracting procedures.

1                   **COMMENTS BY MR. MANNY TENORIO**

2  
3           MR. TENORIO:     Yeah, my name Manny  
4 Tenorio. I'm a local citizen, I'm a Chamorro  
5 guy. Actually, I enjoyed listening it's a -- I  
6 learn a lot just listening to a lot of people  
7 and the lady is right, we should learn from  
8 Guam's experience. I'm not pro-military, I'm  
9 not antimilitary, but we have to, you know, you  
10 live and learn everyday and I'm not a young  
11 man. I guess my brother John Tenorio didn't  
12 show up because he would like to see the PCB  
13 cleaned. And these are some of the bad things  
14 that the military left behind since World War  
15 II. I guess what they ought to, clean up the  
16 area first, clean up a piece of this, clean up  
17 some of the dirty wells that contaminate the  
18 island, and maybe make some good rapport with  
19 the people. But all in all, this is probably  
20 the best time for the military to come in  
21 because of the situation of the -- economy in  
22 the island is very bad. So, the Okinawans  
23 don't want the military, so they sent them down  
24 here. It's not our choice, but the Northern  
25 Marianas is a US commonwealth so we have to

**DEPO RESOURCES**

**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

1 take part in whatever protection, the interest  
 2 of the United States. And the military owns  
 3 2/3 of Tinian, Medinilla and some part in  
 4 Tanapak, they have the right to use this area.  
 5 But I think the main thing here is that the  
 6 military should work with the people, should  
 7 give opportunity to the local people to be part  
 8 of the build-up because we need the job. This  
 9 is, our situation here now in the Marianas and  
 10 I guess in most part of the world, is very bad  
 11 because of the economy of the entire world,  
 12 it's a global recession.

13 So, everybody wants to welcome the  
 14 military if it's for the better of the island,  
 15 but again we have to wait, we have to wait. We  
 16 don't know. We don't have the military  
 17 personnel here except for Tinian. They have a  
 18 few exercises here and there. We don't know  
 19 how they really operate. We don't know why  
 20 Okinawa or the Japanese Government chased them  
 21 out or forced them out. So, where do they go?  
 22 They look at the Northern Mariana Islands it  
 23 is. This is a strategic area, Guam and Guam is  
 24 a US territory. And I guess this is, I don't  
 25 know, strategic area, new strategy for the

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

I-446-001

1 military, I don't know what the third world war  
2 is going to be.

3           So, you have to weigh these things.  
4 Why should the military spend billions of  
5 dollars to, in a place 40, 80,000 people? To  
6 protect the 300 million people in the United  
7 States. Everything now is high-tech game. You  
8 talked about missiles, computers, everything is  
9 high-tech, so, even a small island like Saipan  
10 and even Guam has a potential of doing a lot of  
11 military strategy. But all in all, I think you  
12 should look, you know, you have to wait, give  
13 opportunities to the local people to actually  
14 look at what the military is trying to do, the  
15 EIS, the Environmental Impact Statement, what,  
16 800 pages, I don't know who's bright enough to  
17 read that thing in a day or two. Somebody may  
18 take weeks and months to develop this. You  
19 give us two days to analyze it, come on, come  
20 on. You see, you know, you can do better than  
21 that.

22           Each impact study is different, you  
23 have environment impact study, you have land,  
24 you have animals, you have insects, you have  
25 fish, you have human resources, social impact.

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-446-002

Thank you for your comment. Please see response to I-446-001.

I-446-003

1 I don't know, what is our experience? This is  
2 a small island, small community of people, but  
3 look, they're exiting, exiting, exiting,  
4 exiting. There are probably non-Chamorro in  
5 this room tonight and if you go to the next  
6 door, there are more non-Chamorros than our  
7 locals that are here. We're all outnumbered  
8 already as it is now.

9 So, if the military wants to come in,  
10 please look at the local resources first and  
11 use them. Train people here, we are trainable.  
12 Don't be like the, what this security people  
13 here, yeah -- they bring their own people in.  
14 For heaven's sake, they chase out the people in  
15 the Immigration and bring their own people in.  
16 There's Congressman Torres there, I guess he  
17 has something to say about this too.

18 But listen, we are Americans. A lot of  
19 us are educated but unemployed. We don't need  
20 a guy all the way from Wisconsin or Kentucky or  
21 Alabama or Ohio or what, to come over here when  
22 you can train our own people.

23 So, these are the consideration I guess  
24 that the military has to look at the social  
25 environment. How these will affect the people?

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-446-004

1 This, you know, it infuriates people to find  
 2 out that tomorrow he has no job. We have our  
 3 representative here, the Congressman, but as  
 4 the lady says, non-voting delegates, so, we  
 5 don't vote in any of these decisions. Somebody  
 6 always vote for us. I'm sensitive about these  
 7 things because I have seen with my own eyes how  
 8 the locals are treated by supposedly Americans,  
 9 good Americans. We're not second class  
 10 citizens. We are just as good as anybody.

11 So, please, we want to welcome the  
 12 military, but not everybody is going to say it  
 13 in open arms. No. We have, if we have to  
 14 grow, we have to grow together, we have to work  
 15 together. If the facilities are not there, for  
 16 heaven's sake, you got money coming out your  
 17 ears, build-up the facility, train the people.  
 18 And let them be a part of this growth. You  
 19 want military? This is a very small community,  
 20 we know everybody else. I can tell you who's  
 21 not from here just by looking, and I can tell  
 22 you who's Chamorro, who's Carolinian and who's  
 23 Bangladesh, because I live here, because we  
 24 have only a handful of people here. The bottom  
 25 line is this, let's be fair whatever we do, we

**DEPO RESOURCES**

**I-446-004**

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DOD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

Public comments on the DEIS are an important part of the decision-making process. This information becomes part of the FEIS and is evaluated when DoD prepares the FEIS and issues a Record of Decision at the end of the NEPA process.

1 need the help of the military, okay? This  
2 island is drying up and it's not, some of these  
3 things are out of, none of our, we cannot  
4 control, it's controlled by a global influence.  
5 Things that happened in Japan, things that  
6 happened in the United States and even in the  
7 certain areas in the United States of America,  
8 the unemployment rate is very high. You can't  
9 get hired for every job they advertise. There  
10 are 500 applicants there and if you are not  
11 white you get the heck out of there because  
12 they won't hire you, period. These are the  
13 realities of life.

14 So, here in the Marianas, please,  
15 listen to the local people, local government,  
16 local congressman; right Stanley? Listen, we  
17 want the military, we need the help. We really  
18 need the help maybe not from the military  
19 alone. But this island is drying up. This  
20 island, and John will testify to that, the  
21 budget from 300 some million dollars here, now  
22 to what, 150, more than 50 percent. Revenue is  
23 down. People are exiting. Newcomers are  
24 coming in. Pretty soon you don't see any  
25 Chamorro around here, because actually the

**DEPO RESOURCES**

I-446-005

1 weather is beautiful. We move from the States  
2 because we freeze out there. Out here even if  
3 it's 110 degrees you can still survive. You  
4 can stay out there for 30 minutes, one hour,  
5 two hours in a subzero climate, you know what  
6 I'm saying General?

7           Anyway, to make a long story short, we  
8 need the military but we have to work together,  
9 okay? And the military actually is a  
10 dictatorship, not to boast about it, they're  
11 dictators, they do what they want to do because  
12 they want to protect you. So, you have no  
13 right to say no sometimes, you know what I'm  
14 saying? They do what they want to do, but we  
15 are people and we have respect for the  
16 military. We have respect for the newcomers  
17 here and we want to be part of the development  
18 and the growth of this island. And at this  
19 time when the economic conditions of the  
20 Marianas is very bad, it is probably a very  
21 strategic time for the military to come in and  
22 make good, like pumping in some federal dollars  
23 here because we need to survive. And for a  
24 long time we've been waiting for the  
25 development to start in Guam and we're hoping

COMMENTS BY MR. DAVID M. EVANGELISTA

MR. EVANGELISTA: I will not -- probably, this will not take so long because I have toured from one end to the other end and I kind of grasp what's going on already, so. Mainly, is that my -- what you call this, main concern is local tourism access to these places that's environmental friendly while they conduct the duration of training. That's the only thing that I'm concerned of.

I-447-001

Other than that, business opportunities, I think military buildup came in at the right time for local people to benefit on the maintenance section and most likely probably people that are very concerned of is their cattle grazing back there.

I-447-002

So, on that -- I don't own cattles back there but on behalf of them I think we should address that too for the future of this cattle grazing. So most likely, business opportunities that I'm hear, I myself -- we all know that Tinian don't have really that much of buying power. Although, I think we should look into this and I welcome everybody to this, you

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-447-001**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-447-002**

Thank you for your comment. The Navy has re-evaluated the need to terminate all subleases in the leaseback area and will only propose to terminate subleases in the leaseback area that are within the range footprint and associated Surface Danger Zone of the proposed firing ranges.

As to possible sites for the relocation of any leases, such actions would be under the control of Commonwealth of the Northern Mariana Islands (CNMI) officials as they are responsible for non-federal land use decisions on Tinian. DoD will work with CNMI land use and natural resource officials to ensure that native forest habitat concerns for Endangered Species Act (ESA) listed species are taken into account in any relocation effort.

I-447-003

1 know, and I'm glad that I've seen so many news  
 2 up in the air of they're still debating on  
 3 whether to use the land or not to use it. But  
 4 now it's coming toward us, so most likely the  
 5 impact of the environment is the most mainly  
 6 concern of and tourism is the bread and butter  
 7 for the CNMI, so, access towards Long Beach is  
 8 my main concern is and access for local  
 9 fishermen because as of this time we cannot go  
 10 fishing in front of the -- it's no take zone  
 11 right in front.

12 So, if for example, those areas have  
 13 been logged down and local fishermen cannot  
 14 access some parts where they go fishing for the  
 15 local delicacies such as lobsters and fresh  
 16 fish, of course, you could go by boat but some  
 17 people don't own boats. And that's the only  
 18 main concern that I have and I'd like to say  
 19 thank you very much for everybody. And I think  
 20 the local business people and restaurants and  
 21 other communities in the business sectors  
 22 should benefit -- local businesses should  
 23 benefit from the military buildup. Thank you  
 24 very much and thank you for the opportunity.

25

**DEPO RESOURCES**

**I-447-003**

Thank you for your comment. Public notification would occur in advance of training periods to allow advance coordination with the local community. During non-firing periods, the areas could remain open to approved civilian uses, such as recreational fishing. Section 2.3.4.4 of Volume 3 describes civilian access.

COMMENTS BY MS. BETSY CRUZ

MS. CRUZ: Thank you. How's everybody doing the night? Good. It's nice to see local people here concerned and I have several things that I'd hope that the team will address or consider.

One, looking at some of the maps over at the Tinian socio-economics the space and one farmer should be considered and not just elected officials because they're the ones that do everyday work. You know, they go out there after work and hustle, so I would like them to be heard continuously and not just our elected officials.

Second, there should be continuous public education and awareness for everyone. I know some of the farmers didn't hear about it on the newspaper and it's just mostly word of mouth. There should be access roads to the farmers land when certain roads are blocked. If Broadway is blocked, right now the farmers don't have access road to go around. So the military should look into building one for these farmers.

I-448-001

I-448-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of

Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-448-002

1 I also like to know the types of  
 2 animals that will be used on island and if  
 3 there's a possibility of future pollution for  
 4 our islands and the environmental safety. And  
 5 lastly, if there should be more frequent  
 6 trainings on Tinian and the military should  
 7 acquire a bigger land space or expand their --  
 8 work location, that you please, consider the  
 9 impact of our generation who will and might be  
 10 able to use those lands.

I-448-003

11 So, I hope you take my concerns  
 12 seriously so that the people here in Tinian can  
 13 enjoy the rest of our island's natural species  
 14 and for tourisms like Mr. Evangelista said.  
 15 Thank you.

16  
 17

 25

**I-448-002**

Thank you for your comment. The only animals that would specifically be used as a result of the proposed action are mice as bait in traps for the brown tree snake on Guam and dogs that would be used to help inspect cargo for the presence of the brown tree snake.

**I-448-003**

Comment noted.

COMMENTS BY MS. HOPE CRISTOBAL

1  
2  
3 MS. CRISTOBAL: God bless you,  
4 Clifford. [speaks in the Chamorro language; I  
5 came in from Guam -- I attended the meeting on  
6 Guam. I came here because this is a big  
7 project here in CNMI. God bless you, first  
8 time here. This plan for Tinian and Guam is  
9 like -- we need to study it more better because  
10 the military] as an industry is the largest  
11 polluter of the world. And although there are  
12 very many sophisticated ways of clean-ups,  
13 there are also many different levels of clean-  
14 ups. And there is a clean-up level to -- for  
15 commercial use, there's a clean-up level for  
16 clean-up back to its original, you know, pure  
17 way that -- I mean, the soils are.

I-449-001

18 So, we need to be concerned about that.  
19 I looked over very quickly the 300 pages that  
20 has been dedicated for Tinian, but also I had a  
21 chance to look at the Guam part, I didn't not  
22 find any sections there -- that there'll be a  
23 public disclosure policies established to  
24 inform the public when the military is  
25 conducting training that would contaminate the

I-449-002

**I-449-001**

Thank you for your comment. DoD would be responsible for managing any and all environmental contamination caused by implementation of the proposed actions analyzed in this EIS.

**I-449-002**

Thank you for your comment. Public notification would occur in advance of training periods to allow advance coordination with the local community. Section 2.3.4.4 of Volume 3 describes civilian access, and Section 2.3.5.1 describes range cleanup procedures.

I-449-002

1 environment that -- we need to have established  
2 policies so that you will know what's going on  
3 in your backyard when the military is  
4 conducting a live fire training.

5 Now, I'm told that most of the weapons  
6 that are going to be used at the live fire  
7 training even here in Tinian are handheld kinds  
8 of weapons. But there is a missile, the  
9 ballistic missile defense system that is being  
10 established, and I know that type of system  
11 uses rocket propellant especially liquid  
12 propellants that are highly toxic. And  
13 probably would take thousands of years to clean  
14 if it can even be cleaned up.

I-449-003

15 And so, we are very concerned about  
16 toxic contamination of the water. [speaks in  
17 the Chamorro language; you guys here better be  
18 prepared because if the military comes they  
19 will take your water -- they will tell you what  
20 to do when they get here. Make sure you check  
21 what they tell you guys what they have inside  
22 their bases here. In Guam we ask -- I think  
23 this is the ballistic missile defense system  
24 right here. We are very concerned on Guam].  
25 My concern about Guam is that there has been,

**I-449-003**

Thank you for your comment. DoD is committed to the responsible use, handling, storage, and disposal of all hazardous substances, including any flammable or toxic substances such as liquid propellants. In fact, with regard to hazardous substances, the DoD when feasible, the DoD is committed to reducing or eliminating the use of these substances to the greatest extent possible and substituting them for less toxic substances.

When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs and controls are fully described in the EIS document.

1 you know, the military alienation of our  
 2 properties, of our lands there and that  
 3 occurred by the laws of our colonial power, of  
 4 course, the United States. Guam does have an  
 5 international personality, it's called non-self  
 6 governing territory. And by policy, this big  
 7 environmental change that's going to happen  
 8 whether it's called a policy or not, it is a  
 9 policy. What is going to happen is it's  
 10 forever going to change our lives and the way  
 11 we live our lives on our little island. We're  
 12 going to be told when the oceans are going to  
 13 be closed because there is bombing going on and  
 14 that's already happening with FDM. We're  
 15 already going to be told that with the live  
 16 fire training that's going to happen in Guam.

I-449-004

17 So, just that, that's a minor change  
 18 but we are going to have major, major concerns  
 19 with traffic for example, just the traffic,  
 20 80,000 more people added to our Guam population  
 21 is a real concern. So, the fundamental tenants  
 22 of colonialism really is alienation in our own  
 23 homeland and I'm very concerned about that.  
 24 That does happen through military condemnation  
 25 of lands but it also happens -- there are other

I-449-005

**I-449-004**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-449-005**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The FEIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

**I-449-006**

Thank you for your comment. The population estimates in the Draft EIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The EIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Final EIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40%

I-449-006

1 forms of alienation that have the very same  
2 effect. For example in migration of new  
3 residents, that will displace the Chamorro  
4 people and we will become a minority in our  
5 homeland in Guam.

6 Also, it would change our demographic  
7 relationship in our homeland. We are going to  
8 be minoritized and we are going to be the ones  
9 that will feel the pinch of the demographic  
10 changes in Guam. Let's see, I'm very concerned

11 that the DEIS does not address and I'm made to  
12 understand in my discussions with people that  
13 have attended the meetings in Guam that the

I-449-007

14 military is not considering anything beyond the  
15 framework, the US framework by which we are,  
16 you know, being administered. And they are not  
17 considering the framework of the international  
18 personality and relationship that Guam does  
19 have at the United Nations because Guam does  
20 get discussed. Guam does have international,  
21 what do you call it, we have international  
22 standing at the UN. Every year we get  
23 discussed, and very year the UN does pass a  
24 resolution in particular to Guam as a non-self  
25 governing territory. And because of our

of Guam's population in the 2000 U.S. Census. Chamorro concerns involving political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control.

More information on this topic can be found in the Environmental Justice and the Protection of Children chapters of the Final EIS, specifically, Chapters 19 in Volumes 2, 3, 4, 5, and Chapter 20 in Volume 6, and under cumulative impacts (Chapter 4) of Volume 7.

**I-449-007**

Thank you for your comment. Topics such as the political status also commonly referred to as "decolonization" and "self-determination" of Guam are important issues but are not part of the proposed action. DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island's natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-449-007

1 minoritization, our ability to control our  
 2 homeland and making the major decisions in our  
 3 homeland to address us as a people so that we  
 4 can continue to have our lands to perpetuate  
 5 our culture and our people and our livelihoods;  
 6 and our traditions are going to be really  
 7 challenged with the high influx of new peoples  
 8 that will come to make Guam as their home  
 9 through this major policy change by the United  
 10 States.

11         So, I'm very concerned that it's not  
 12 being addressed. And I feel the DEIS must take  
 13 into consideration the fact that there is a  
 14 treaty that has been signed by the US and it's  
 15 called the Treaty of Nations or the UN Charter.  
 16 That is very applicable to Guam and that this  
 17 is a major change in Guam and it must take into  
 18 consideration its political impact on our  
 19 people. Thank you.

1                   **COMMENTS BY DR. LISA NATIVIDAD**

2

3                   MS. NATIVIDAD:    Hafa Adai.    I'm Lisa  
4 Natividad.    I'm also from Guam and we apologize  
5 that we're in your microphone space, that  
6 really wasn't our intention coming here  
7 tonight.    But we also know it's a rare  
8 opportunity for us as Chamorros across the  
9 island.    I'm not crying, I have a really bad  
10 case of the pink eye.    So if I sound emotional,  
11 I'm not really emotional, okay.

12                  But I just wanted to share, I spent a  
13 bit of this afternoon today looking at,  
14 specifically, at the Tinian chapter of the EIS,  
15 the DEIS.    And for us on Guam, that is I'm sure  
16 is the case here, and certainly there is no  
17 question that you folks in the CNMI have  
18 experienced a tremendous economic burden the  
19 last few years.    And oftentimes, we get very  
20 desperate in our attempts to relieve these  
21 situations because people suffer, and we  
22 understand that.    But I just wanted to pull out  
23 an excerpt that really stuck out to me in  
24 reading the sections specific to Tinian.    And  
25 this is taken from Volume 3, Chapter 16 and

**DEPO RESOURCES**

**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

27

I-450-001

1 it's specifically on Page 21 which is under the  
2 section that's called Social Economics and  
3 General Services.

4 Now, as part of the table that's a part  
5 of the report is the table is titled Summary of  
6 Impacts. Okay. So, after having looked at the  
7 situation here in Tinian, there is a number of  
8 summary points and so I want to share them with  
9 you. Specific to economic impacts, it states  
10 "Minor beneficial economic impacts to the CNMI  
11 economy." Roughly, there is going to be about  
12 180 construction jobs, 35 indirect jobs and 12  
13 to 15 direct jobs on Tinian. Okay.

14 So, all this promise of, you know, this  
15 is going to boost the economy; it's going to  
16 create significant number of jobs. We're  
17 finding on Guam as well, as we dissect this  
18 document, that there's not a whole lot of  
19 economic benefit at least for the average  
20 person on our islands.

21 You know, it's true, I know earlier  
22 there was reference to the politicians and our  
23 -- the leaders are the only one is being  
24 consulted. And you have to kind of call to  
25 question why are they taking their stance and

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-450-001**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

1 positions, and often times it's connected to  
 2 economic gains that they're connected to in  
 3 terms of their businesses and those sorts of  
 4 things. So, we need to look, as community  
 5 members we need to open our eyes and really  
 6 look critically on what's going on, you know,  
 7 and what's being proposed because we have a  
 8 colonial history that has imprinted our psyches  
 9 and our very existences that the majority of  
 10 the people in this room have no idea what that  
 11 experience is.

12 So, you need to find and look  
 13 critically and understand the complexity of  
 14 these issues. The second finding in their  
 15 report is specific to tourism. And it states,  
 16 "Significant adverse impacts to Tinian economy  
 17 due to periodic access limitations to tourism-  
 18 related sites. Cattle grazing, land and wild  
 19 chili plants, economic cost may outweigh the  
 20 benefits." It's very clear in the report that  
 21 if you are looking for economic stimulation,  
 22 that's probably not going to happen with this  
 23 buildup. And again, these bullets are specific  
 24 to Tinian.

25 The third point, public service

I-450-002

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-450-002**

Thank you for your comment. The proposed action on Tinian would produce some economic benefits. The construction phase is expected to create 35 jobs on Tinian and the operations phase would create 12-15 new jobs. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) for further information.

The economic losses would stem from reduced access to certain areas. Restrictions to certain areas are required to maintain public safety. DoD acknowledges that maintaining access to important cultural and recreational sites is important. Although plans concerning access to sites potentially impacted by the proposed action have not been developed, it is not the intent of DoD to totally restrict access. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-450-003

1 impacts; less than significant impact to public  
 2 safety services, one more police officer may be  
 3 required during the construction period. Now,  
 4 this issue of public safety is very close to my  
 5 heart and I say that because I've been to  
 6 Okinawa and I've worked very closely with  
 7 different resistance, movements in Okinawa.  
 8 And no disrespect to the Marines in the room  
 9 because we're sure you are all model Marines,  
 10 but the reality is in Okinawa, the primary  
 11 reason that a lot of the -- the activists and  
 12 the people have been protesting the presence of  
 13 this particular Marines that we're inheriting  
 14 is because they were committing a lot of crimes  
 15 towards women and children particularly on  
 16 crimes that were sexual in nature and heinous.  
 17 And so, they basically have come to their  
 18 tipping point.

19 Now, when we make the cross, the walk  
 20 across the room, often times they'll say,  
 21 "Well, you know, there was a rape case of a 14-  
 22 year old girl", yes, that's true in that  
 23 specific year, but those single cases are just  
 24 the ones that hit the headlines, right? There  
 25 has been accumulative number of cases of rape

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

30

**I-450-003**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-450-004

1 that were committed against their community.  
 2 And that's why, I know for example, one protest  
 3 in Okinawa had over 100,000 people that went to  
 4 the streets. So, they really, you know in our  
 5 language [speaks in the Chamorro Language;  
 6 they've reached their limit] right? They've  
 7 reached their threshold there. Enough is  
 8 enough with these particular Marines that we're  
 9 inheriting.

I-450-005

10 And the fourth point, with regards to  
 11 social culture impacts states, "Significant  
 12 adverse impacts to military civilian  
 13 relationships" because during training  
 14 exercises, local residents would lose access to  
 15 popular beaches, fishing spots and the memorial  
 16 crosses at the north tip of the island on  
 17 religious holidays. Okay.

18 I know, this is my second trip to  
 19 Tinian. The first time I came I was hosted by  
 20 one of your folks and we drove and we saw those  
 21 crosses and I know how important those memorial  
 22 sites are for you guys culturally. So, part of  
 23 the impact, although it's probably not  
 24 discussed, is that you won't have access to  
 25 those memorial sites anymore.

**DEPO RESOURCES**

**I-450-004**

Thank you for your comment.

**I-450-005**

Thank you for your comment. Access impacts are addressed in Chapters 8 (Land and Submerged Land Use) and 9 (Recreation) of Volume 3. Access impacts associated with the crosses at the north tip of the island are addressed in Chapter 16 (Socioeconomics and General Services).

1           So in closing, I want to thank you guys  
2 for welcoming us to your community and we  
3 encourage you guys to be steadfast and to stand  
4 up for what you believe in, stand up for your  
5 land and stand up for what's best for your  
6 people. As hard as it is and as much as it  
7 seems like a losing battle, we are finding  
8 encourage in each other to do that and that's  
9 why we extended our hands by being here  
10 tonight. Thank you.

COMMENTS BY MR. LAWRENCE DEPONCHU

1  
2

3 MR. DEPONCHU: Good evening everybody.  
4 I've known Cliff forever, holy cow. Anyway,  
5 welcome and thank you for coming. I just --  
6 I'll try not to take up too much of your time  
7 but I just like to start out by saying that  
8 food security is a matter of National Security  
9 and never before in history of Tinian have we  
10 ever had so many family-owned ranches, cattle  
11 ranches. Cattle ranching is highly  
12 sustainable, we're moving forward with the idea  
13 of trying to do a grass-fed beef industry.

14 So, any consideration that we can have  
15 in terms of getting that thing going is very,  
16 very important to us. And I'd like to say  
17 secondly that although it seems sometimes that  
18 our cultural sites or maybe -- I was talking to  
19 some in National Park Service people this  
20 morning, but, you know, we want to make sure,  
21 we may get an explosion of people in this  
22 island, military and possibly if we get these  
23 casinos up and running, there's going to be a  
24 lot more people on it, we want to make sure  
25 that these latte stone sites or and more sites

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-451-001**

Thank you for your comment. The DoD would attempt to minimize impacts to agricultural activities on Tinian. Impacts of the proposed action on agricultural activities are presented in Chapter 8 (Land and Submerged Land Use).

**I-451-002**

Thank you for your comment. As discussed in the Volume 3, Section 12.2, the area that would be cleared of vegetation has been surveyed and data recovery would be conducted at all archaeological sites that are eligible for listing on the National Register of Historic Places. In accordance with the Programmatic Agreement, distinctive artifacts would remain on Tinian while the remainder of the collections will be curated on Saipan. No intact latte sites would be disturbed from construction associated with the Build Up.

I-451-003

1 are protected, because, you know, once these  
 2 things start happening, they happen very  
 3 quickly, and all it takes is one bulldozer and  
 4 we've lost so many of our sites in Tinian.  
 5 Tinian has basically been denuded of all of its  
 6 forest and a lot of its cultural sites. We  
 7 want to make sure and protect the ones that are  
 8 here.

I-451-004

9 Lastly, I'd just like to say and  
 10 especially seeing that there's a lot of concern  
 11 with invasive species, so, you know, I worked -  
 12 - I'm sorry, I'm Lawrence Deponchu by the way.  
 13 I work at NMC, the cooperative extension  
 14 service. So, for many years we've dealing with  
 15 invasive species and just recently in the  
 16 experience that Guam has had with the, what do  
 17 they call, the rhinoceros beetle? Prime  
 18 example of how -- there's no mechanism for  
 19 dealing with things like this absolutely right  
 20 away, because maybe all of you realize that as  
 21 soon as something comes to the island and flies  
 22 away, it's too late already.

23 So, when we look at the model that  
 24 Hawaii has, it's a great model, they have a  
 25 council, they have a mechanism for dealing with

**I-451-003**

Thank you for your comment. As discussed in the Volume 3, Section 12.2, the area that would be cleared of vegetation has been surveyed and data recovery would be conducted at all archaeological sites that are eligible for listing on the National Register of Historic Places. In accordance with the Programmatic Agreement, distinctive artifacts would remain on Tinian while the remainder of the collections will be curated on Saipan. No intact latte sites would be disturbed from construction associated with the Build Up.

**I-451-004**

Thank you for your comment. The development of the Micronesia Biosecurity Plan (MBP) in conjunction with the proposed actions in the EIS involves many government agencies in addition to the DoD. These agencies will determine the best approach to invasive species management in Guam and the CNMI and throughout Micronesia in connection, particularly in connection with the buildup, but also encompassing other regional issues. The Hawaii model may be suggested by this group as a model. The MBP will incorporate early response actions and rapid response where necessary as best management practices.

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

I-451-005

1 invasive species right away. Oftentimes, the  
 2 best way to do with these things, the most  
 3 least invasive way of dealing is manpower, you  
 4 know, getting out there, dealing with these  
 5 things right away.

6 So, you know, if we're -- there is --  
 7 and I'd like to say that there's a lot of  
 8 people that are working on invasive species  
 9 already but they're not sort of together as a  
 10 group, especially since we're dealing with two  
 11 different whole entire governments which is  
 12 unfortunately at Marianas. But setting up an  
 13 invasive species council and having funding  
 14 like Hawaii does, I realize now that that's the  
 15 mechanism, they're giving -- the council in  
 16 Hawaii has RFP on their website. I realize now  
 17 that that's the mechanism for dealing with  
 18 these things right away.

19 So, I'd just like to say, if we are to  
 20 get together in trying just slowly sort of work  
 21 on this as a cooperative extension people and  
 22 quarantine people, writing a competitive grant,  
 23 that's very difficult. If there's any way that  
 24 you -- that anybody in this, you know, if we  
 25 can get some help, leadership, so we don't have

**I-451-005**

Thank you for your comment. As mentioned in a previous response, the Hawaii model may be suggested by the group developing the Micronesia Biosecurity Plan (MBP) as a model. DoD will fund initiatives that are developed in the MBP. Through the MBP, the DoD plans extensive coordination with all Guam and CNMI agencies that have responsibility for invasive species issues. For additional information on the MBP and existing and interim measures for invasive species control, please refer to Volume 2, Chapter 10, Section 10.2.2.6 for terrestrial species and Volume 2, Chapter 11, Section 11.2.2.6 for marine species. Volume 2 Chapter 14 has been updated to include information on projected increased marine traffic associated with both organic growth and increases due to the military buildup.

I-451-006

1 to worry about whether or not we're going to be  
 2 funded or whatever -- for me, these things  
 3 should be supported. We need to have a council  
 4 or some mechanism for dealing with invasive  
 5 species as they come about because we've, you  
 6 know, it's just dramatic. You see what  
 7 happened with the Scarlet gourde in Saipan,  
 8 it's here in Tinian, it's been here for years  
 9 and we haven't been able to deal with it. I  
 10 mean, these things we can deal with them, we  
 11 can be ready and so if there's any help that we  
 12 can get in terms of funding or at least helping  
 13 us to coordinate and make sure that we get the  
 14 funding so that we're not just sitting there at  
 15 night on our computers in our spare time,  
 16 writing these proposals and then getting  
 17 rejected, you know, this is something that,  
 18 that should be automatic, invasive species, how  
 19 to do with it right away. Thank you very much.

**I-451-006**

Thank you for your comment. A Biosecurity Plan that includes Guam is currently being developed by the Navy and the government agencies responsible for addressing invasive species problems. That plan will be developed as part of the mitigation for the impacts that would occur or potentially occur from the proposed action described in the EIS. Development of the plan would include procedures for prevention and control of invasive species for Guam and Tinian. These would include inspection procedures at shipping points and procedures for troops to help prevent movement of invasive species such as the brown tree snake, insects, or plant seeds between islands. Treatment of newly discovered or existing invasive species would also be addressed. The Navy will consider funding these initiatives as part of the proposed action.

COMMENTS BY MR. MATT BLANCO

MR. BLANCO: Good evening, my name is Matt Blanco. I'm not very good as to talking in front of audiences but I will say my biggest concerns are -- while I was watching this live show, I saw a lot of information about helping out the Government of Guam with power plants and doing something with the harbor, but I didn't see anything about Tinian. I mean, if you guys are coming in here I'm just going to ask, please consider us highly.

MR. KING:    Yeah, good evening.    For  
some of you guys -- I recognize Roy and Lisa  
and Mr. Jackson, welcome back to Tinian.    My  
name is Vincent King and I'm in between job  
right now because there's a change of  
administration, but that's how it is.

I-453-001

          The thing that I want to express is,  
I've been working with these gentlemen and  
ladies and about this DEIS thing.    And no one  
ever said that the military will bring economic  
boom to Tinian.    Nobody ever said that, you  
know, and nobody ever tried to scare the people  
of Tinian that all these destruction's going to  
come here.    I've been in the military, I've  
seen what military does.    It's all pre-planned,  
all this engineering people, especially the  
environmentalist.    They're very strong against  
all these destructions.    So, please, thank you,  
the two ladies from Guam of your input, but we  
know a little bit of what's going on with the  
military that's trying to do something here.  
It's only small ranges that they are going to  
build.    And for their training up north field,

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-453-001

1 those are just minor stuff. Down the road is  
2 where these things are going to take place,  
3 then the elected officials at that time will  
4 work with these people.

5 But, for right now, please, you know,  
6 don't let all these big things that's -- the  
7 military is going to bring to Tinian or -- Guam  
8 has a problems already. I'm not too sure if  
9 any of those things are going to come down  
10 here, they're not even looking at us, like Matt  
11 said. Think about us down here.

12 So, don't bring news down to us that,  
13 you know, all these destructions are going to  
14 come to us, cultural destructions, fighting  
15 with troops, rape among the civilians. You  
16 know, we're worried too much and we haven't  
17 seen anything yet. So, let's just, let these  
18 guys do their job, let our leaders do their  
19 job. And if we don't like it, we come to a  
20 place like this and we, lack for a better word,  
21 we bitch about it, and at least we try to say  
22 something. That's all. Thank you.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 364

Received: 2/5/2010 12:16:04 AM

Thank you for making this forum available. I arrived in Guam in December 2009 when my navy husband received orders here. He is a career Navy officer of eighteen years and has served on aircraft carriers on numerous occasions during our fifteen years of marriage. We have been stationed in Bremerton, Washington and San Diego, California during those times. I have a Bachelor's in Development Science from UC Berkeley and consider myself a moderate environmentalist. We are excited to be on Guam and have been exploring the beauty of the island's beaches. I was aware of the proposed buildup of Marines before coming to Guam and became concerned about the impact it would have on the environment and infrastructure after our arrival here. I have read the Executive Summary and have the following comments: 1) A pier already exists for transient carriers just inside the harbor entrance. It should be improved, rather than spend millions dredging more of Apra Harbor and potentially damaging coral reefs. Nuclear aircraft carriers are designed to be self sufficient and receive supplies at sea from their support group. Port visits are nice but do not require brand new piers to facilitate same. Creating a new pier will not change the difficult navigation of the entrance to the harbor either. 2) Island infrastructure is not prepared to cope with a 30% increase in population. Roads are already congested, particularly through downtown areas and at base entrances. There are insufficient facilities for sewage treatment and waste disposal. I am not aware if any proposals have been made to increase recycling (particularly by sending materials back to the US in empty shipping containers) but it should be considered. The Government of Guam might also request a high temperature waste incinerator, such as those used in the state of Tennessee and France. I am sure others have addressed the issues of electric power generation, especially the pollution generated by the Piti plant, which needs scrubbers, and the reliance on non-renewable, imported fuels. I would also question whether the water supply is sufficient year round. If the US will benefit so greatly from increasing the military presence on Guam, then it should also bear the burden of the cost of doing so and not shift that burden to the citizens of this island as so often has occurred in the past. Respectfully submitted, L. Carey

I-454-001

I-454-002

#### I-454-001

Thank you for your comment. This response assumes the commenter is referring to Kilo Wharf just inside the outer harbor entrance. Chapter 1, Volume 4 describes the reasons why Kilo Wharf is not considered a practicable alternative. One of the reasons is that adding the anticipated 63 visit days per year for the proposed action would not be operationally practical due to conflict with the usage of Kilo Wharf as the only wharf on Guam for munitions and the need to accommodate for future growth. Chapter 2, Section 2.3 discusses why other alternative wharf locations were also dismissed, including locations that already have an existing wharf or pier. Navigational difficulties are associated with the Inner Apra Harbor channel, not entering the Outer Apra Harbor where a new wharf is proposed at Polaris Point or the Former SRF. Aircraft carrier requirements vary depending on the type of port visit. Transient visits, like the type that is proposed in this EIS, allow longer stays to meet operational support requirements, including unscheduled repairs, maintenance and crew quality of life. There would be no dependants for quality of life support or full depot maintenance as this support is provided at the ship's homeport. To accommodate a transient visit, a berth is required with full "hotel services" for the ship and crew for a duration of stay than is longer than normal for a port visit. Studies have shown that morale and quality of life of individual sailors are important to maintain a combat ready unit. These longer stays with a ship relying on shore side utilities increases force protection concerns, however, the advantage of a transient capable-port is that a ship can be re-supplied or maintained without returning to its homeport.

#### I-454-002

Thank you for your comment. As addressed in Volume 6 of the EIS, DoD anticipates substantial investments in infrastructure should the proposed military relocation program be implemented.

**COMMENT SHEET**

I-455-001

Volume 2 chapter 16 page 95 states: "For public education services, the GPSS, GCC, and UoG together would need to hire a combined 490 teachers/faculty for the year 2014, falling to a combined 135 after construction ends."

If we manage to hire 490 teachers, what will happen to the 355 teachers after the construction period ends. Becoming a teacher is not easy. Do we really expect people to go to school for 4 years or more to get a degree and then get certified, to be gauranteed a job for only a short period of time?

**I-455-001**

Thank you for your comment. As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will stabilize at a level above the current situation. The fluctuation in the number of jobs is expected to be greatest in the construction industry. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the Socioeconomic Impact Assessment Study (Appendix F of the Draft EIS), notes that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

Volume 2 chapter 16 page 95 states: "Public safety agencies – Police, Fire, Corrections, and Youth Affairs – would require a combined 249 key professionals in 2014, falling to a combined 99 a few years later."

150 key professionals will be left jobless after the construction period? I thought the build up was supposed help national security. Is job security not a national problem?

#### I-458-001

Thank you for your comment. As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will decrease. The decrease in the number of jobs is expected to be greatest in the construction industry; however, the number of construction jobs after the proposed action is expected to remain higher than it is currently. Job training for work in the construction industry would be beneficial to Guam's workforce overall.

There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present, including public safety professionals; job seekers on Guam should diversify the industries for which they seek training and entry.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 369

Received: 2/5/2010 4:27:41 AM

I-459-001

Volume 2 Chapter 16 Page 96 states "Chamorro concerns involves political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control, although at present there is little evidence that a majority would support such moves at any rate."

How will this issue be addressed? And I'm quite curious to know what evidence there is to suggest that a majority would not support such a move. Also, as far as I know, self determination is not something granted by voters. Self determination is a fundamental principle in international law and is embodied in the charter of the United Nations.

I believe this section was poorly written and further propogates a sense of hopelessness in our community, as well as undermines the rights of the indigenous people of Guahan.

### I-459-001

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action.

Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

## COMMENT SHEET

I-460-001

First of all I'd like to say that I do not judge a group of people based on just a few individuals. With that said, I thought I'd let you know that there is a group on Facebook you might be interested in taking a look at it. Although the group is made up of just a very small fraction of those marines in Okinawa, what they posted was quite alarming. Here is just one example, "okinawa is the floating fetal abortion of japan..."

The link is:

[http://www.facebook.com/posted.php?id=201035718843&share\\_id=276369443050&comments=1#/group.php?v=wall&ref=share&gid=2220643771](http://www.facebook.com/posted.php?id=201035718843&share_id=276369443050&comments=1#/group.php?v=wall&ref=share&gid=2220643771)

I believe in freedom of speech, which of course these men and women are training and fighting to protect, but I'm concerned about what kind of cultural competency training they receive. Obviously, some of these men and women are going through culture shock. If they come to Guam, are they going to spread such hatred of our island, or will the military be more prepared and provide better cultural sensitivity training? Because I'm not sure what these men received is going to cut it here.

### I-460-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 375

Received: 2/5/2010 10:42:37 PM

The Army Environmental Command is scoping Guam for possible homeporting of the Joint High Speed Vessel (JHSV). Since the DEIS indicates dredging of Apra Harbor to accommodate aircraft carriers, it is appropriate that the final EIS incorporate JHSV with similar mitigations as proposed for the carriers and other large vessels. If Guam is fortunate to be selected as one of the JHSV sites, it would definitely enhance first response to national emergencies or crises that affect stability in this region. Furthermore, this vessel would greatly complement the relocation of the U.S. Marines as well as the Guam National Guard, when you consider joint forces.

I-461-001

#### I-461-001

Thank you for your comment. The Army's programmatic assessment of various locations (including Guam) that may be suitable for Joint High Speed Vessel (JHSV) basing has been added as a cumulative project to Volume 7, Chapter 4 of the Final EIS. The project would be subject to independent NEPA environmental review. Mitigation measures for the JHSV in Guam would not be included in Guam and CNMI Military Relocation Final EIS but would be proposed, as applicable, during the environmental review of the action when it is proposed.

I-462-001

With the water quality on the beaches in Guam - most of the time already polluted by EPA. The build up will just make the problem worse. What is going to be done about this?

#### I-462-001

Thank you for your comment. The EIS analyzes impacts to marine water quality that potentially could result from the buildup. This assessment looked at the current water quality conditions on Guam in the areas where the buildup may have an impact; specifically in the area of Apra Harbor, in the waters surrounding the northern part of the island, and in the area where the Northern District Wastewater Treatment Plant discharges into the ocean. Mitigation measures which would abate these impacts were discussed, including measures that would be the responsibility of DoD (such as control of sediment during dredging and stormwater controls during construction and operation of the new base), and those that are not within the control of DoD (such as controlling stormwater runoff from construction spurred by the buildup.) The EIS also identifies measures that may have a shared responsibility between DoD, Guam EPA and other agencies (such as the Guam Water Authority for upgrades to the Northern District Wastewater Treatment Plant).

I-463-001

## COMMENT SHEET

I-464-001

Why is Mount Lam Lam a part of the military buildup? Shouldn't it be preserved like California's Mount Soledad?

#### I-464-001

Thank you for your comment. DoD understands and recognizes the significance of access to cultural sites located on DoD property in Guam. Restricting access to certain areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to Mt. Jumullong Manglo (including the Mt. Lam Lam trail) consistent with safety and operational requirements. Final plans concerning access to Mt. Jumullong Manglo (as accessed by the Mt. Lam Lam trail) have not been developed, DoD looks forward to working with stakeholders including groups that use the area for traditional religious activities to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of this site.

## COMMENT SHEET

I-465-001

The coral impacts identified in Table 11.1-1, are significant but considering that much of the area was impacted previously when Apra Harbor was constructed in 1946-1953 means the Navy has avoided other options that would involve coral resources and or recreational uses.

Staying away from Big Blue Reef and minimizing indirect impacts associated with turbidity from dredging is critical.

I-465-002

Apra Harbor is a well established commercial and military industrial Harbor and arguments that diving, fishing and similar activities have some higher level of priority is not logical. Guam needs to accommodate military activities and everyone needs a commercial port. Apra is a critical area for the sustainability of our island community. Many other coral reef area have been degraded, damaged, lost and reef fisheries diminished. Federal and local conservation programs are effective in some ways but mostly ineffective when it comes to controlling pollution runoff from private and government of Guam projects. Why should the Navy and Marines, in this modern era take the brunt of criticism and hard-nosed regulatory policies?

I'm a local fisherman, have been for most of my life and while I hate to see coral reef areas taken away I understand that from a larger perspective this CVN proposal is reasonable.

#### I-465-001

Thank you for your comment.

Yes, the Navy has considered the potential impacts to water quality, coral reef, and marine ecosystem from the proposed action and has chosen the Least Environmentally Damaging Practicable Alternative in Polaris Point, away from Big Blue Reef.

Most of the area to be dredged, which was dredged 60-years ago, has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The ecologically important shoal areas (western shoals, middle shoals, jade shoals, big blue reef), will not be impacted by direct dredging activities. In addition, based on computer modeling, taking into account tides and currents, there are no indirect (sedimentation) significant impacts anticipated.

The Navy has developed a list of policies, procedures, mitigation measures and best management practices (BMPs) to lessen these impacts. Land-based construction activities require permits, which include BMPs that help contain and reduce sediment and pollutant discharges into nearby waters. The Navy, along with local agencies have a role ensuring proper management of these permits and BMP methodologies. Additionally, the Navy will implement low impact development (LID) or stormwater management strategies during construction activities. The goal is to maintain or restore the natural hydrologic functions of a site to achieve natural resource protection objectives and fulfill environmental regulatory requirements. New wharf structures in Apra Harbor will have cyclonic stormwater devices that treat water before discharging to the harbor. The Navy will also implement and properly manage mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months, and compensatory mitigation projects (for unavoidable significant impacts to coral reef) to

help improve nearshore water quality through upland watershed reforestation and/or artificial reef construction, to name a few.

**I-465-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The Pagat Cave, nearby latte stones and other artifacts are resources that the vast majority of island residents have never visited. It's shameful how so many people are up in arms about the firing range based on so called "impacts" to Pagat.

There are many latte stones sites around Guam that have be damaged or stolen and artifacts taken and nobody ever cared enough to stop the criminal activity. Now many are focused on Pagat. Pagat is not an endangered site! There are many other latte sets along our coast and the firing range will not impact the site. What's the fuse?

Guam Historic Preservation Office does little if any enforcement. The military actually takes good care of historic sites. I have been to Ritidian cave, Pagat Cave, Marbo cave, and Falfai caves. It's clear that caves on military lands are well cared for while most sites on private or government lands are in poor condition.

The Pagat area will actually benefit from military management.

I-466-001

Thank you for your comment.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 381

Received: 2/6/2010 7:34:07 AM

I-467-001

Item #1. Based on the population increase predicted (30-50% increase) for Guam during this military buildup and relocation of Marines, a similar increase (30%-50%) should be funded by the military to correspondingly increase Government of Guam employees especially in the area of schools, hospital, police, fire, safety, public works, revenue and tax collection, jail, environmental protection, parks and recreation, public health, social services, education, public safety, and any other similar area. I see no plans of any kind that directly state increases in all these areas for personnel and DOD is forcing them to hire more workers.

Item #2. Similarly a 30% - 50 % increase in new or improved facilities for all the Government of Guam services and areas listed in item #1 (schools, hospital, police, etc...). I did not see any listings for new buildings and infrastructure listed in the DEIS that will help the Government of Guam meet this increase. Perhaps more study is needed to find out the exact increases, or at least an estimate, for Government of Guam employees that would be needed and what should be built and funded is needed by the military.

I-467-002

Item #3. Similarly a 30% - 50% increase in the roads on Guam should be planned and built. Where are the plans to build new roads? I only saw improvements to existing roads and some minor new roads on the military property. A study is needed to list all the new roads, along with road improvements that would be needed. Where is the billion dollar highway plans, which was mentioned several years ago to connect the northern and southern areas of Guam via a highway? Where are the road improvement plans with bike lanes, bus stops for public transit buses, sidewalks, and wider lanes to accommodate large construction and military vehicles? It is needed to mitigate the substantial increases in traffic that will be brought by this buildup.

Item #4. Where are the plans to implement and fund an island-wide public transit system to also mitigate the increase in traffic. This or at a minimum a study of such a system for Guam needs to be included in the list of options for mitigations for the 30%-50% increase in traffic.

#### I-467-001

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

#### I-467-002

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

The new highway that you mention was a concept that would connect Navy facilities near Apra Harbor with Andersen Air Force Base. The proposal had been included in previous planning documents and was conceptually evaluated in the development of the 2030 Guam Transportation Plan. This route would primarily serve as a transportation corridor for only the military, would be very impactful to the environment and would be very costly to construct. In order to benefit Guam's roadway network and make better use of limited funds, DoD and the Federal Highway Administration (FHWA) plan to improve existing routes instead.

As projects move forward, design details to accommodate bike lanes, pedestrian facilities, and design vehicles will be addressed to the extent

possible.

The 2030 Guam Transportation Plan outlines recommendations for an improved mass transit system on Guam. These recommendations included forming the Guam Mass Transit Authority and implementing high-capacity bus service on the island. In late 2009/early 2010, the Guam Regional Transit Authority (GRTA) was formed and will now be responsible for all public transit functions. The GRTA approved the Guam Transit Business Plan in January 2010, which includes purchasing new buses, constructing a bus maintenance facility, and modifying the bus schedule.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 382

Received: 2/6/2010 7:35:36 AM

I-468-003

Item #5. To mitigate the increase in crime associated with a 30%-50% increase in population on Guam, some mitigation plans that should be included are a rape hotline, rape crisis center, a new jail, new police offices, more police officers, etc... Where are all the studies and plans that clearly show what would be needed and what will be done by the military to assist the community outside the military base?

I-468-004

Item #6. Where are the studies and plans and funding amounts needed for new and improved utilities and infrastructure on Guam to meet this buildup? New power generation, new water sources, new waste water treatment plants, power lines, water lines, sewer lines, and related new access roads should all have plans and related studies with justifications for the choices. Again a 30% -50% increase in each should be done. A great mitigation idea would be to build a reservoir on the Malojloj River and put in a Hydroelectric Dam. This would give a reservoir, new water source, and a new power source that is renewable energy. It would also diversify the power grid and reduce use of oil on Guam, which is in line with various executive orders for DOD.

I-468-002

Item #7. What noise mitigation will be provided to residents not on military property to deal with the increases in the number and frequency of flights? How will residents be notified of what they are entitled to from this change? This is critical to outline your plan for anyone in a flight path approach.

I-468-001

Item #8. Why are global warming impacts not included or considered in the DEIS? Sea level is rising and will likely dramatically impact Guam in the near future (next 30 years). Guam's beaches are disappearing already. Will Apra Harbor still exist in 50 years? How will Guam likely change? Where are the studies that look at this and the planning being done to address this with new construction along coastlines?

#### I-468-001

Thank you for your comment. The Navy acknowledges there is potential for their existing and future coastal facilities to be adversely affected by sea level rise, inundations from more extreme storm events and other consequences of climate change. However, predictive models on future sea level rise are subject to variability, due in part to unknown future greenhouse gas emissions. The variability increases with the period of time being assessed. Risk assessment methodologies and technologies are being developed to predict the potential impacts of climate change on existing Navy coastal facilities. As new design criteria relevant to climate change are adopted by the Navy, they will be incorporated into project design.

#### I-468-002

Thank you for your comment. Noise levels around Andersen AFB would be dominated by the U.S. Air Force ISR/Strike action currently planned. The contribution of USMC activities would be minor in comparison. As a result, the USMC is not planning soundproofing around Andersen AFB.

#### I-468-003

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

#### I-468-004

Thank you for your comment. Volume 6 of the EIS provides analysis for

all utilities and roads associated with the buildup. Included in Volume 6 are detailed options for providing drinking water, power, wastewater, solid waste disposal, and roads.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 383

Received: 2/6/2010 7:36:04 AM

**I-469-001**

Item #9. Why are H2 worker to be used for construction and waivers being given to increase the amount for Guam's buildup? Is DOD's boss, President Obama, aware of this? Is not the US mainland in a terrible recession with millions of Americans out of work? Should not all jobs go to US citizens? Pay a decent wage and stop sending our jobs and money overseas. This is the US military building on US soil. Why is any non US citizen earning money from this, especially at the construction worker level? Where is the plan to recruit US citizens first? I believe the building materials usually have to be made in the USA, why not the labor force too.

**I-469-002**

Item #10. Why is DOD planning to take more land from the Guam residents? Where are the plans and options to place all activities on existing DOD property? DOD has plenty of land already. Place it at Ritidian, or Haputo, the Andersen golf course, or another DOD property. If it can't exist on DOD property then move it off of Guam. How many firing ranges do you need? Don't they already have ranges at NCTS, Orote, and Andersen? Where is the common sense? Please reconsider your taking of more land from the local people and use existing properties you control.

**I-469-003**

Item #11. In order to promote this buildup, you need to pay the WWII war reparations to survivors and forgive the Government of Guam debts to the federal government. This would go a long way in saying to all the local people that we are in this together and that the federal government realizes the dramatic impact this will have and is doing its best to mitigate the situation.

**I-469-001**

Thank you for your comment. The waiver of the limit on H2B workers is not part of the proposed action and is not analyzed in the DEIS. A large number of H2B workers (an estimated maximum of 18,370 in 2014) are expected to provide labor during the construction phase of the proposed action. The estimated numbers of H2B workers related to the proposed action are noted in Table 4.3-9 of the Socioeconomic Impact Assessment Study (Appendix F of the DEIS).

Qualified Guam (and Mainland) construction workers would be accommodated with first priority, but many more qualified off-island workers would be needed. To fill this void, it is anticipated that H2B workers would be needed. H2B workers would come to Guam for DoD jobs and have completed the required applications for H2B workers.

**I-469-002**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-469-003**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an

indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

**I-470-001**

Item #12. The Chamorro Culture on Guam is dying out. Bringing a 30%-50% increase in American culture will further dilute the Chamorro culture on Guam. Last census had Chamorros at only 40% of the population on Guam and this buildup will move the Chamorros to only 30% of the overall population. Can grants be given or increase existing grants, and can Chamorro schools be established or given federal funds to help mitigate this situation by promoting Chamorro language and culture on Guam. The risk is the elimination of Chamorros on Guam. I don't think anyone wants that. Another mitigation for this issue would be to grant Chamorros tribal status on Guam and provide a reservation in Southern Guam from Umatac to Talofofo. Establish a committee to make this happen and give the Chamorros a homeland on their island, so they are not lost forever. This reservation would only use about 25 % of the island and then DOD and the Dept. of the Interior (current Government of Guam) can split up the rest. An example of a plan to do this would be that only 50% Chamorros (not Guamanians) would qualify and everyone would be given a plot of land on the reservation. People that don't qualify can be given land on another area of Guam or the US. Help to set up an initial tribal government with elections could be done and then handle it like other American Indian reservations, so that Chamorros will always have a homeland, place to return to, with Chamorro language and culture on Guam.

**I-470-002**

Item #13. DOD needs to preserve access to recreational areas for the public at Three Crosses area, Mt. Lamlam area, Pagat area. Do not repeat what happens at Spanish Steps on Orote, Tarague Beach on Andersen, Haputo Beach on NCTS; where only the military or if people who have a connection can you visit these sites. The public currently has access to the three areas of concern and it should remain that way. If DOD restricts access then they need to compensate the public with some improvement for recreation on Guam as mitigation. Build a walking trail at Pago Bay or maintain the Government of Guam public parks for them, or find some other way to help the general public in terms of recreation.

**I-470-001**

Thank you for your comment. The population estimates in the DEIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The DEIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the DEIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40% of Guam's population in the 2000 U.S. Census. More information on the minority of the Chamorros is provided in the Environmental Justice and the Protection of Children chapters of the DEIS, specifically, chapters 19 in volumes 2, 3, 4, 5, and chapter 20 in volume 6, and under cumulative impacts (chapter 4) of Volume 7.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. The DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. In terms of cultural and historical sites, every effort is being made to leave sites undisturbed. It has also been noted that DoD should work closely with the Guam Museum to respectfully manage important Chamorro artifacts so that the current population of Guam can learn from them. Finally, the DoD plans to

increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

The Chamorro people are not a tribe that has been recognized as an Indian Entity and, subsequently, it is not eligible to receive services from the U.S. Bureau of Indian Affairs (source: Federal Register, Volume 74, No. 153, August 11, 2009).

**I-470-002**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

Thank you for your comment. The population estimates in the Draft EIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The EIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Final EIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40% of Guam's population in the 2000 U.S. Census. Chamorro concerns involving political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control.

More information on this topic can be found in the Environmental Justice and the Protection of Children chapters of the Final EIS, specifically, Chapters 19 in Volumes 2, 3, 4, 5, and Chapter 20 in Volume 6, and under cumulative impacts (Chapter 4) of Volume 7.

Through the process of public involvement that has accompanied this proposed action (see FEIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As

indicated in the FEIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

The Chamorro people are not a tribe that has been recognized as an Indian Entity and, subsequently, it is not eligible to receive services from the U.S. Bureau of Indian Affairs (source: Federal Register, Volume 74, No. 153, August 11, 2009).

**I-471-002**

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 386

Received: 2/6/2010 4:31:56 PM

I-472-001

I am concerned about some of the blanket statements made in the Socioeconomic study (Appendix F).

I am a military member who is from Guam, and I can attest to the fact that most of my income goes to the local community. K-Mart often has competitive prices and more selection than AAFES or NEX. Also, the variety of restaurants available on post pale in comparison to off post establishments. Simply said, I find it very hard to believe that military members on Guam only spend money at the commissary.

Secondly, Appendix states that most of the "profits" from post exchanges go back to the states. A) AAFES is a non-profit entity, there it makes dividends. B) Two-thirds of AAFES dividends go to MWR programs, including the MWR program on Guam. I urge you to look at the Andersen AAFES financial records over a recent period of time. There you will see exactly how much of "profits" went to the local MWR services and to the recent upgrade to their AAFES facility. C) Where is your data stating how many locals work on the military installations on Guam, or are in the National Guard, or are related to either? You are wrong in stating that these individuals spend locally while military members from off-island do not.

During my recent visit to a military shopping facility, a majority of the shoppers were locals.

The following quote, specifically, breeds ignorance and resentment towards the off-island military on Guam:

"the military do not spend a great deal of their income in the local economy, especially if they are housed on-base as the Marine and Army personnel in the proposed action are expected to be. Much of the expenditures by military personnel are made at on-base establishments that send profits off-island, such as military.....post exchange outlets"

I'd like to see the data that supports this claim.

Toni Morgan

## I-472-001

Thank you for your comment. The Socioeconomic Impact Assessment Study (SIAS) does not conclude that members of the military spend all of their money at the on-base commissary; Table 4.3-37 of the SIAS shows that members of the military are expected to spend 12% of their pre-tax income within the Guam economy.

The SIAS does note that the proposed action will increase employment opportunities on Guam, both on-base and off-base (please see Section 4.3.1 titled Employment and Income).

Your comment regarding your observations of the clientele of the on-base commissary is noted.

The SIAS does make an economic assumption that members of the military, who would live in on-base housing and have access to on-base shopping and medical facilities, would spend a lower proportion of their income in the Guam economy compared to other non-military residents, who pay for housing in the Guam market and do not have access to on-base shopping and medical facilities. This assumption has been reviewed by numerous members of the military and is considered valid.

Re: Chapter 4, Transient Aircraft Carrier Berthing  
Concern: Reef Dredging - Unexplored Alternative

I-474-001

The two retained alternatives for Transient Carrier Berthing would destroy a precious resource - unique reef environment - on Guam. Guam reefs have been devastated by man-made degradation and are an important ecology which should not be further destroyed when all possible alternatives have not been considered.

I-474-002

Figure 2.3-1 shows 12 alternatives. A 13th alternative was not considered: The location is the waterfront area 2000 feet due west of the floating dry-dock, between Sumay Cove and St. Luis Beach, approximately due north of Lockwood Terrace. (Directly under the words "Dry Dock" on Figure 2.3-1.) Let's call it the "Lockwood Wharf" site.

The Lockwood Wharf waterfront has greater than 70' of water depth immediately offshore according to Figure 2.3-6. Navigational access to this site would require minimal, if any, dredging and offers "straight in" approach from the mouth of Outer Apra Harbor.

The site has extensive undeveloped backland providing opportunity for installation of all required shoreside facilities. The location is significantly more advantageous logistically than Polaris Point due to its location at the center of Naval Station.

It is located outside of the Kilo Wharf ESQD arc.

The site has a deteriorated bulkhead, is now a wasteland, and the remains of the former wharf litter the waterfront. It needs to be cleaned up and put to good use, such as a transient aircraft carrier wharf! At this location, it would also be available 300 days per year for berthing of all other types of naval assets.

Lockwood Wharf is an unexplored alternative that offers all of the benefits and very few of the negative impacts associated with the two retained alternatives ... and is better than both of those alternatives in many ways.

Lockwood Wharf should be added to the list of potential sites and fully vetted.

I believe Lockwood Wharf will become the preferred and successful alternate. It will serve the Navy's needs and will be fully supported by the People of Guam.

## I-474-001

Thank you for your comment. The EIS acknowledges there would be impacts associated with the proposed construction of a new deep-draft wharf in Apra Harbor to accommodate a transient nuclear powered aircraft carrier. There are no other harbors in Guam, aside from Apra Harbor, capable of supporting Naval vessels for the proposed action as described in Chapter 2 of Volume 4 of the EIS. The DoD looked at several different potential wharf site locations, channel alignments, and turning basin options within Apra Harbor and used selection criteria to determine potential sites that would be both feasible and that would avoid/minimize environmental impacts to the extent practicable. Best management practices and potential mitigation measures have been identified (and are discussed in the EIS) to offset potential impacts from this proposed action. As identified in Volume 4, Section 11.2.2.5 - 11.2.2.7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7. Compensatory mitigation for unavoidable coral community impacts includes the following options: Option 1: Artificial Reefs within Apra Harbor or Other Locations; Option 2: Watershed Restoration and Management (Aforestation, Apra Harbor and/or Philippine Sea Riparian Enhancement, Stream bank stabilization component [all project goals to reduce sediment discharge into nearshore waters]) Option 3: Coastal Water Resource Management (Shallow Water Reef Enhancement); and Option 4: In-Lieu Fee or Mitigation Banking Program.

**I-474-002**

Thank you for your comment and suggestion on another potential location for the aircraft carrier wharf. The noted "Lockwood Alternative" was considered and subsequently dismissed from further analysis in this EIS for a number of operational and environmental reasons.

Operationally, this location is not ideal because it is within an area of the base that is somewhat remote and would require substantial utility upgrades and connections to support the aircraft carrier berth and is not located near any quality of life amenities. It is also located close to the nearby Orote Airfield and overlaps with the clear zones set for the airfield. Any potential future operations at the airfield would be impeded by the aircraft carrier presence. While the proposed location is outside of the explosive safety quantity distance (ESQD) arc for Kilo Wharf, berthing a carrier at this site would preclude any future capacity expansion of net explosive weight at Kilo Wharf.

Although this area would likely require less dredging than Polaris Point or the Former SRF, the quality of coral in the potential impact area is much higher than at either of the other two locations and would still require mitigation. Since this area is less protected than either Polaris Point or the Former SRF, there is more wind and wave action at this site which would render silt curtains less effective. It is also located in an area closer to areas utilized by Endangered Species Act (ESA)-protected sea turtles. This location is also located directly adjacent to a wetland, "St. Luis pond," which is considered habitat for the Mariana moorhen, a species that is listed under the ESA. In order to build a wharf here, some filling of the wetland would be required along with wetland mitigation.

For these reasons, the proposed Lockwood Alternative was subsequently dismissed from consideration in this EIS as a potential wharf location for the aircraft carrier. Your comment is noted and appreciated.

I think it's appalling that people have been given only 90 days to review a 10,000 page document. What's even more appalling to me, however, is that the U.S. military already occupies nearly 30% of Guam, and is aiming to consume even more of the country's land, water and air. This voracious military appetite needs to be curbed, and more priority needs to be placed on preserving our global, dwindling natural resources.

I-475-001  
I-475-002

#### I-475-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

#### I-475-002

Thank you for your comment.

Dear General Bice and members of the JGPO,

I-476-001

I am very concerned about the short period of time left to comment on the DEIS. 90 days to read, analyze and respond to 11,000 pages of dense text written in foreign jargon is simply not enough time for a lay person like me. This extension is also personally important to me because I am currently attending graduate school in New England. I have been unable to attend any of the hearings or informational meetings. I have not been able to sit in a library on Guam to review the volumes. My computer does not have the amount of memory it takes to download the DEIS on to my hard drive. I have downloaded and read several sections and could not understand what was being said. I was born and raised on Guam, I plan to move back after I graduate, and live there. It deeply distresses me that I have not been provided the time and the resources I need to comprehend the complexity of the information of this document.

I-476-002

I have several concerns about some of the plans detailed in the DEIS. One of those is on the issue of land acquisition. There has been a lot of confusion over the details about this. Part of the problem is that the Land Acquisition Impact Study portion of the Socioeconomic Impact Assessment Study has not been released to the public. Please consider extending the comment period until that information is released and the public has had time to review and respond to it.

All I ask is for fair treatment and transparency because as of now your own statements have been vague. In the press, General Bice, you've been quoted to say you are sure agreements will be made with private land owners but have not assured the public that should an agreement not be reached, the plans for the build up will not lead the Federal Government to acquire land by condemnation or the use of eminent domain. Local residents are against this motion, the legislature is against this motion, the Congresswoman is against this motion. I am against this motion. By releasing the Social Impact Assessment Study, the JGPO would be able lay these concerns to rest and allow the attention and conversation to focus on something more productive.

In summation, before releasing the final EIS, I call on the JGPO to release the Social Impact Assessment Study & to extend the commenting period of the DEIS for the sake of transparency and fairness. Thank you for your consideration and I look forward to your prompt response.  
sincerely,  
Christina

#### I-476-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

#### I-476-002

Thank you for your comment. Details regarding land acquisition were covered in the DEIS Land and Submerged Land Use Chapter. DoD feels this information was adequate to inform the public and decision-makers. Additional detail on land affected by the proposed action is provided in the FEIS, Socioeconomic Impact Assessment Study (SIAS) and Land Acquisition Baseline Report (both located in Volume 9, Appendix F).

DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its

requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-477-001

Before I start out, i want to thank the heavenly father for providing this great opportunity to share my feelings. I am not a U.S. citizen nor an alien, I am an eligible noncitizen who is very concerned about the military buildup on Guam. From my own experience from staying here on the island of Guam, I do NOT think that the military buildup would do any good to the people of Guam. I believe that the people would be happy without the marines coming in. To the people of Guam, please don't let money be your reason for wanting to have the military buildup. Money just drives people crazy and turns the world upside down. I am very concerned about the relocation of the marines in a way that it will destroy the livelihood and attraction of this beautiful island of guam. Thing to consider: relocating marines on island will make the territory of guam a target for U.S. enemies since it is closer to the boundaries of U.S. potential enemies such as Korea, Japan or China. The United States is using the people of guam as their means to survival. Just like what they did to the Marshall Islands for testing of the bombs. They intentionally dropped the bombs near the island, knowing that there are people there. The test include how the bomb will affect people. "they treated them like guinea pigs" as a writer once wrote. Well, not much to say now except that im very proud that my leaders from the FSM did not allow U.S. military presence in our islands. God bless Guam.

I-477-001

Thank you for your comment.

After taking considerable time to review the draft EIS, the needs of the military, and the needs of Guam, I am convinced that the proposed build-up, as presented, is not in Guam's best interest. I do not say this lightly. I proudly served in the U.S. Navy for six years. Three of those years (1985-1988) were here on Guam. It was a positive experience and influenced my decision to return in 2002. So I speak first-hand when I say Guam is a welcoming community. And, without question, Guam has welcomed the military.

I do believe there ought to be a military presence on Guam and that its mission here is critical. However, I fear the military will remain partial to its needs and that Guam's concerns are more incidental.

I do not fear change but at what cost? What is proposed here will forever change the face of Guam. The government and people of Guam need help and I am not surprised our Governor is supportive of this build-up. I do believe it will bring revenue and jobs. But I also believe it is too much, too fast, and Guam is not prepared.

The people of Guam are U.S. citizens, yet we can not vote for our President. We have a Congresswoman, yet she can not vote within the House. Japan has more say with regard to this build-up (and Guam's future) than do we, the citizens of Guam. Is this fair representation?

Guam's resources are limited, its environment is stressed. The very term "build up" is disturbing. I believe Guam should be more focused upon preservation of its precious resources. Yet the draft EIS indicates population growth beyond what our small island can sustain? Yet it proposes acquisition of more land? Yet it proposes to dredge and widen a channel inside Apra Harbor that will have adverse impact upon the existing coral reefs? This is alarming to me.

I sincerely thank you for allowing me to voice my concerns.

Robert Abela  
Tamuning, Guam

### I-478-001

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-478-001

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 398

Received: 2/8/2010 8:19:09 AM

#### Direct Quote from the EIS:

"43% of active-duty military personnel admit to frequent binge drinking. In addition, 67.1% of binge-drinking episodes were reported by personnel aged 17-25 (representing nearly half of all active-duty military personnel), and a quarter of those episodes were reported by underage personnel (Central Broadcasting Service News 2009)." (Vol.2, Ch. 16, Pg. 1092)

#### My reaction:

I'm concerned with this issue for many reasons. We're going to have about 80,000 military personnel relocated to Guam from Japan. If almost half of them are frequent binge-drinkers, how will this affect Guam? This along with many problems coming from the buildup will impact our island. Most residents, along with their families may not feel safe with what's coming in the near future. Everyone knows what alcohol does to people, so just imagine what it would be like for there to be 35,000+ frequent binge-drinkers arriving on island.

#### A solution:

I think a possible solution could be to move all or most night clubs, bars, or other places like that. Since the government already wants to move them out of Tumon for a better tourism industry, I think it would be a good idea to relocate the night life clubs and bars near or around military installations so more people may benefit.

## I-479-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 400

Received: 2/8/2010 12:52:22 PM

Thank you for this opportunity to comment. My name is John Perez, and I am a Law Enforcement Officer on Guam, and a full-time student at the University of Guam. My comments are my own, and do not necessarily reflect those of the Agency which I am employed with, nor those of the staff, faculty, or students of the University.

The DEIS (Vol. 2, 16.1.5.3 Public Safety, p.16-26) lists that the Guam Police Department is the law enforcement agency for the entire territory, outside of federal property. Is this a planned change to the existing concurrent jurisdiction accords between COMNAVMAR, AAFB (now Joint Region Marianas), and the local government?

Jurisdictional issues are further discussed in the DEIS (Vol. 2, Ch.16, 16.2.2.3, Jurisdictional Issues, p.16-79). It appears that only tenant units under Joint Region Marianas are covered by this section of the DEIS. What is not covered are visiting units, who fall under the purview of their respective commands (i.e. The U.S.S. George Washington falls under the US 7th Fleet and not Joint Region Marianas). If a sailor on the GW were to commit a crime in violation of local law, and were able to successfully make it back to the ship before getting caught, the GW may set sail with a fugitive on board, as the Joint Region JAG and the Guam Police would not have jurisdiction to arrest the sailor.

While the course of action that has been practiced in the past has been to indict the sailor in local court and have a warrant of arrest issued for the sailor, this is not only cost and labor intensive, and may have undue negative impact on the service member's career. If the service member was innocent, an arrest would still be part of his or her criminal record, regardless of innocence or guilt. That process also does not address having the service member appear on Guam after they have either PCS'd or ETS'd out of Guam. Will the Government of Guam be responsible for paying for a (current or former) service members travel expenses to return to Guam just to be interviewed regarding a crime in which the person has been named a suspect, or will it be the responsibility of the DOD?

As Guam gears up for waves of visiting military units, perhaps new DOD regulations, having a memorandum of understanding with PACOM or the DOD instead of just the USAF or COMNAVMAR (Joint Region Marianas), or a modified Status of Forces Agreement (SOFA) need to be in place to deal with this critical issue.

#### I-480-001

Thank you for your comment. Issues of crime and jurisdictional issues have emerged as important public concerns during the public comment period. Additional information, as available, has been added to the FEIS.

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 401

Received: 2/8/2010 1:13:27 PM

Thank you for this opportunity to comment. My name is John Perez, and I am a Law Enforcement Officer on Guam. My comments are my own, and do not necessarily reflect those of the Agency which I am employed with.

Whether you are in the military, or from Guam's civilian population, in life, as Benjamin Franklin once said, "[n]othing is certain but death and taxes." I would like to comment in reference to one of the two topics, death. The DEIS lists that "[n]o increases in demand for health care services would occur as a result of additional military activities on Guam" (Vol. 5 , Ch.18, 18.2.5.1, Health Care Services, p.18-7). Providing a little bit of history, Guam has two hospitals, with USNH primarily serving the DOD population; and GMH primarily serving the civilian population. The USNH has had anywhere from none to two Medical Examiners assigned to conduct autopsies at the USNH. However, when a death occurs which involves suspected homicide, suicide, traffic accidents, or other suspicious deaths, and a medico-legal autopsy needs to be conducted, both the military and civilian hospital, both local and Federal Law Enforcement turn to Guam's Office of the Chief Medical Examiner (CME), headed by Dr. Aurelio Espinola. He is the only certified Forensic Pathologist in the entire Micronesia Area, and also serves under contract as the Forensic Pathologist for the CNMI, the other countries in Micronesia. As a homicide investigator, I have worked closely with Dr. Espinola, and have seen him conduct autopsies on the deceased bodies of service members, retirees, their dependents, as well as civilian federal and contract workers who passed away while under the purview (employment or otherwise) of the DOD. With an increase in the amount of service members expected as a result of the military buildup on Guam, it goes without reason that there will be a proportionate increase in the amount of deaths which will occur.

Unless there is a plan not covered in the DEIS for the DOD to station a Forensic Pathologist at the USNH, Guam's resources will be stretched even thinner, as Dr. Espinola will be assuredly turned to for assistance on future cases. This will create undue burden on his office which will eventually require the Government of Guam to hire another Forensic Pathologist to handle the workload. That is, unless the DOD is willing to either fund the creation of the new position for Guam and Micronesia, or staffs the USNH with their own Forensic Pathologist.

I-481-001

**I-481-001**

Thank you for your comment. Section 18.2.5.1 of Volume 5 addresses potential impacts to public services as a result of implementing the no action alternative. Volume 5, Chapter 16 discusses the potential impact of an increased patient to health care provider ratio as a result of population growth associated with the Army AMDTF. The decision to station a military forensic pathologist on Guam would be dependent on the number of incidents in which these services would be required. Should a sufficient number of cases requiring a military pathologist arise, the military would consider stationing a forensic pathologist on Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 402

Received: 2/8/2010 1:49:58 PM

I-482-001

A positive outcome of the Apra Harbor dredging is to divert sediments to areas around the island that would be able to recycle the material. For example, using the sediments to restore or expand eroded beaches around the island. Using the material as foundation or supporting a boardwalk along East Agana Drive, that adds to the quality of life to this island. Or we could use the sediments to fill any huge depression found on this island to assist development of property. The material could also be used for seawalls to protect the island from ocean surges. All this could occur provided proper screening of soil sediments are administered and cleared by U.S.E.P.A and other related agencies. If the actions are considered above, then it becomes a win win for the people of Guam and the military. The local community then would be able to recycle the dredged sediments. In addition, the aircraft carrier along with its contingent of battleships, guided missile destroyers, etc. would be able to use an expanded harbor to properly respond to national emergencies, humanitarian assistance, defend U.S. interests in this region, etc.

#### I-482-001

Thank you for your comment. The DoD is considering several options for disposal of dredged material, including upland placement, ocean disposal, and beneficial uses such as shoreline stabilization, fill for berms, and fill for the Port Authority of Guam, as discussed in the EIS (Chapter 2, Volume 4). Using dredged material for beach renourishment, as the comment suggests, would depend upon the compatibility of the dredged material with the existing sand/rock on the beach and whether the beach is suitable for renourishment. While beneficial reuse is a priority for the DoD, the final decision on dredged material management will be made during the final design and permitting process.

Sediment samples within the proposed dredging areas were analyzed according to USEPA and USACE testing criteria. As discussed in the EIS (Chapters 2 and 4 of Volumes 2 and 4), preliminary sampling results indicate that all contaminant parameters that were tested with the exception of nickel were below the Effects Range Low (ER-L) level. Nickel is a substance that is naturally occurring in the environment. The study results suggest that the materials to be dredged would not require special handling and would be suitable for upland placement for beneficial reuse or ocean disposal (although the ocean disposal permitting process would require separate analysis and toxicity testing). Additional testing will occur during the permitting process and a dredged material management plan will be developed.

I-483-001

The financial economy of our island today depends mainly on the tourism industry. In reading volume 4 chapters 11.2.2.1 regarding the existing onshore alternative in Polaris point, the onshore construction to take place would be expected to cause erosion and sedimentation run off that would affect the quality and the quantity of the water in and around that area. So that would mean that all the living matter existing in and around the area would be affected. That specific area consists of mangroves that support a diversified number of species.

You have made it quite clear what you want, but what is still vague to me is what you expect to follow after you get what it is exactly that you want. Allow me to note that one of the main attractions to tourists is the islands beaches and its sea life. So if you are going to dredge the coral reef in that area and also expect to establish more facilities wouldn't the amount of activity of that scale affect the marine preserves initially at Sasa bay and then the existing marine life around the entire island on a negative light? Surely the drop in the number of tourists annually would be a reflection of the decrease in the diversity of marine life because of the overall military build up.

I-483-002

Let me remind you that we rely mostly on our tourists for money flow into the island. How would the Department of Defense make up for the loss of money in the event that the tourism industry should fail? How much of the money would the local government and its people actually see when you proposed it not to them specifically but to the island overall. In this type of economic monopoly where the players are socially identified as either being the natives, the military and the tourists, the type of player who clearly has the upper hand is the military. It seems that with what's presented in the entire DEIS for Guam the only thing to expect in considering that only one type of player has the upper hand and there is no balance in check, we can only expect to see a dramatically negative Domino effect in the local economy. There leaves no room for alternatives.

### I-483-001

Thank you for your comment. The Navy has considered sediment runoff and resuspension as potential impacts to water quality, coral reef, and marine ecosystem. Land-based construction activities require permits, which include best management practices (BMPs) that help contain and reduce sediment and pollutant discharges into nearby waters. The Navy, along with local agencies have a role ensuring proper management of these permits and BMP methodologies. Additionally, the Navy will implement low impact development (LID) or stormwater management strategies during construction activities. The goal is to maintain or restore the natural hydrologic functions of a site to achieve natural resource protection objectives and fulfill environmental regulatory requirements. New wharf structures in Apra Harbor will have cyclonic stormwater devices that treat water before discharging to the harbor. The Navy will also implement and properly manage mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months, and compensatory mitigation projects to help improve nearshore water quality through upland watershed reforestation and/or artificial reef construction, to name a few. As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging activities continues. Unavoidable significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities will be seen. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The ecologically important (and for tourism) shoal areas (western shoals, middle shoals, jade shoals, big blue reef), will not be impacted by direct dredging activities. In addition, based on computer modeling, taking into

account tides and currents, there are no indirect (sedimentation) impacts anticipated. Additionally, there are no significant impacts to Sasa Bay or any mangroves anticipated from the proposed action. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7.

**I-483-002**

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (SIAS - Appendix F of the EIS) for information on the economic impacts of the proposed action. The economic impacts of the proposed action are expected to be positive in general and for the majority of Guam's population. For information on the expected impacts the proposed action would have on Tourism, please see Section 4.3.7 of the SIAS.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 404

Received: 2/8/2010 8:16:56 PM

I-484-001

I-484-002

With the military build up, i feel that Guam should be excluded from it. Guam already has two military bases and why should we add another. i feel that if there is no way out from the military coming to the Marianas islands then put them in the Northern Marianas Islands. they need a whole lot of help. their economy is not going well. they need the military support. they need the income the military will bring. i also feel that if they do come to Guam they should not take the land from the people. they should not close off areas that the people use for life and recreation. the military has a lot of untouched land that they are not using. why take more? and with the reefs being demolished i feel that it is wrong and unethical to do so. the reef is the only protection and resource for the island. the reef keeps tsunamis from hitting the island. the reef is the home to our food source which are fish. we need our reefs and our land to keep our culture, legacies, and traditions alive. i know for a fact it is even so in the CNMI. but they do need the support from the U.S.

#### I-484-001

Thank you for your comment. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire

desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-484-002**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. Significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities will be seen, however, a majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) will not be impacted by direct dredging activities. Based on computer modeling, taking into account tides and currents, there are no indirect (sedimentation) impacts anticipated. There is no correlation between the dredging in Apra Harbor and increased chance of a Tsunami reaching the island. The Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, which would benefit the coral reefs, sea life and people of Guam. The Navy will also implement mitigation measures and

BMPs during in-water (i.e. dredging and wharf construction) and land-based construction activities to lessen any potential impacts to coral reef and sea life in general. Additionally, the Army Corps permit will require measures to protect biological resources and water quality. These measures may include the following: silts curtains, silt fences and sediment traps; biological monitors on vessels; halting of dredging activities if sea turtle and/or dolphin come close to the project until voluntarily leaving the area, and joint Navy/Guam Resource Agency monitoring of nesting beaches though out Guam, to name a few. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 406

Received: 2/8/2010 8:42:43 PM

I-485-001

In regards to Chapter 11 Section 11.1.1.1 paragraph 2

If the methods to which coral reef restoration is still evolving how will we be assured that there will not be irreparable damage done when the area is dredged? Stated above "the Viehman (2009) paper also provides encouragement for coral reef NRDA's to become a process that is objective (quantitative) rather than current, often subjective process", this statement provides that any action should be delayed until such time as quantitative data can be provided. I agree with this assessment as with everything "knowledge is power", subjective knowledge is not knowledge at all, it is an opinion. Quantitative knowledge should provide a better prospective on the damage that may be done. We as citizens of this earth all need to ensure that we are respectful of our natural habitats that we have been blessed with. If there is no definitive answer as to the extent of damage being done I support the NO ACTION ALTERNATIVE until such time that there is sufficient data to prove that future generations will not have to pay for the mistakes that we make during our generation.

#### I-485-001

Thank you for your comment. The Habitat Equivalency Analysis (HEA), which supports the EIS impact analysis, utilized the best available methodologies, research data, received input from resource agencies (USFWS and NMFS), and review from a group of impartial and respected coral reef scientists (see Appendix J) and therefore provides the best available data for which to base EIS impact analysis. Knowledge has three degrees -- opinion, science, illumination. The means or instrument of the first is sense; of the second, dialectic; of the third, intuition (Plotinus). Any piece of knowledge (quantitative or qualitative) "we" acquire today has a value at this moment exactly proportioned to "our" skill to deal with it. Tomorrow, when "we" know more, "we" recall that piece of knowledge and use it better (edited quote from Mark Van Doren) What we do know is that the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. Significant unavoidable impacts will be seen to coral reef, other immobile invertebrates, and some site-attached reef fish as identified in the EIS. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing short-term and localized impacts. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and algae) and is of moderate health based on dive surveys. The shoal areas (western shoals, middle shoals, jade shoals, big blue reef) are not expected to be impacted by dredging direct or indirect (sedimentation) activities based on computer tide/current modeling within Apra Harbor. To lessen impacts, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months. Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This

action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 407

Received: 2/8/2010 8:44:40 PM

I-486-001

In regards to: Chapter 10 Section 10.2.1.2 paragraph 10

Just because a species is not provided on a list does not erase it from existence. All animals contribute to our environment. The Audubon Society states "Birds are important indicators of the overall health of our environment. Like the proverbial canaries in the coal mine, they send an urgent warning about threats to our water, air, natural resources, climate and more." Therefore, all birds, whether listed should be considered to determine the overall impact that disturbing their natural habitat would have on the island. We must respect their natural ability to provide us with information on how our infringement on their natural habitat is affecting not only them but the world's natural environment.

#### I-486-001

Thank you for your comment. Birds are recognized as important components of an ecosystem. Impacts to migratory birds are evaluated under the wildlife component of the Terrestrial Biological Resources Section. Virtually all of Guam's birds are considered migratory. A few non-native species are not considered migratory.

Thank you for your comment.

1           COMMENTS BY MR. JAVIER M. ATALIG, JR.

2

3           MR. ATALIG: Good evening, my name is  
4 Javier M. Atalig, Jr. I just want to say just  
5 a couple of words. I remember 20, about 20, 25  
6 years ago, people all around the world were  
7 saying, "Please US, keep our base open." Guam  
8 was the only one that was strong enough to  
9 stand up to the Federal Government and say,  
10 "Close these bases." Okay.

I-487-001

11           So, keep that in mind, when you wonder  
12 why the Japanese will spend so many billions of  
13 dollars to get rid of the marines, okay? I  
14 remember them when I was a kid. I remember all  
15 the things that they were doing. I'm not going  
16 to get into that. But just keep in mind, all  
17 of you that love Guam and made Guam your home  
18 throughout the years of you growing up in here,  
19 watching your kids and your grandchildren,  
20 remember this, Guam is the most beautiful place  
21 in the world. Don't let anybody else tell you  
22 anything else different because Guam is so  
23 beautiful.

24           Do you remember when that earthquake  
25 hit, that 8.1? I was in Saipan, the first

Comment #	Page Number		
I-488-001	Vol 6. 2-91	Why can't they use Anderson AFB for their trash disposal. I don't believe its all. If it is then can they make one. I have been on base and they have a lot of unused land.	An alternative view would be constructing another place for their trash on the base. They have a lot of unused land towards the main entrance of AAFB.
I-488-002	Vol 6 3-54	Why do they try to over-run the waste water treatment plants. It can only hold 12 MGD and they are expecting more. It can only hold so much.	An alternative view would be to construct another plant not on our land but on the military land.
I-488-003	Vol 4 11-71	As they stated if they see a sea turtle they said they will stop everything / or modify what they are doing to avoid harm.	So what I understand is that people are going to stop what they are doing for modify it. So they may stop all the work. Its hard to believe it.

### I-488-001

Thank you for your comment. Gov Guam is currently constructing a new landfill in south east Guam that is projected to have a life span in excess of 30 years. DoD has an agreement with Gov Guam to utilize that landfill when it opens, projected for July 2011. Thus, there would be adequate capacity in this landfill for the foreseeable future.

### I-488-002

Thank you for your comment. Subsequent to issuing the DEIS, DoD and Guam Waterworks Authority (GWA) reached agreement in principle to establish a special private entity (SPE). This SPE would obtain a loan arranged by DoD to upgrade the North District Wastewater Treatment Plant (NDWWTP). The SPE would also operate the plant and pay back the loan with user fees. The DoD would pay user fees established by a customer service agreement with GWA that would enable the SPE to repay the loan. Future upgrades to add secondary treatment to the NDWWTP, if required, would be funded by the users based on their percentage of demand. The DoD would be one of the highest users would bear their fair share of that upgrade. This has been stated in the final EIS.

Actually, GWA and EPA prefer that DoD utilize existing utilities instead of constructing a new stand alone wastewater treatment plant.

### I-488-003

Thank you for your comment.

Comment #	Page Number		
I-488-004	Vol 4 aircraft carrier berthing 11-64	Sasa Bay is extremely close to Apra Harbor. Won't the dredging affect the Bay area and areas around Apra Harbor?	knowing that Sasa is the largest mangrove in the Marianas and a marine protected area. won't dredging harm the species there and around there. Can't an alternative be found a deeper place on the island, or do it some other place where it is not a marine protect area. If the cant, can they make sasa bay be less impacted as possible and take serious careful measures not to destroy the area and marine life. Dredging will carry silt and other debris around and kill marine life.
I-488-005	Vol 4 aircraft carrier	knowing that the dredging would have "Long-term disruption to coral reef habitat and displacement of species (could take years to recover) why are they even proposing on doing it?	<del>It</del> The thing that disturbs me the most in this DEIS is the dredging of the coral reefs, can we not do this, why do we need regular aircraft carriers here, can they find another place than Guam? we can make money from tourist diving their because reefs around them and marine life is really beautiful.

I-488-004

Thank you for your comment and concern for coral reef ecosystems. The proposed location of the new Navy wharf was chosen as the least environmentally damaging alternative in efforts to avoid the least amount of live coral in the area. The proposed dredge area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. The proposed dredged area consists mainly of a sand, rubble, and algae zone. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. Direct impacts of dredging to the shoal areas within Apra Harbor (Western Shoals, Middle Shoals, Jade Shoals, and Big Blue Reef) will be avoided. The indirect impacts (from sedimentation) to these areas from in-water activities will also be avoided based on computer tide/current modeling performed within the project area (see Figure 11.2-3). The U.S. Army Corps of Engineers permits will likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects.

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

**I-488-005**

Thank you for your comment, which focused on how Guam was chosen for the military relocation, rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

1                   **COMMENTS BY MR. BENIGNO PALOMO**

2

3                   MR. PALOMO:   Si Yu'use maase.   [speaks

**I-489-001**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

I-489-001

1 here to listen, and they're not listening,  
2 that's the truth.

I-489-002

3 So, why am I here? The other thing  
4 that really strikes me is this little pamphlet.  
5 You look at this little pamphlet and what  
6 they're saying is exactly what's going to  
7 happen to us. All these properties is  
8 condemned property. Sumay, the heart of Guam's  
9 commerce before the war, was condemned and  
10 taken. You can't even go into Sumay to pay  
11 your respect to the dead? That's what's going  
12 to happen, when these 8,000 Marines -- these  
13 are good people, don't misunderstand me,  
14 there's nothing wrong with the Marines or the  
15 people, it's the volume that's coming. The  
16 volume is so huge that it's going to affect our  
17 every life. The roads are loaded now, can you  
18 imagine? And it's not just going to be cars  
19 coming in, there's going to be trucks and  
20 carriers and things like that. It would affect  
21 our every life.

22 One thing I want to say because of my  
23 limited time, is that I love America. I'm a  
24 loyal American. How long -- I was born before  
25 the war, during the war, during all kinds of

**I-489-002**

Thank you for your comment. Past land acquisition impacts on Guam have occurred and have been contentious; referred to as frequently during the DEIS public hearings as being against the wishes of the private landowners. However, these actions occurred in the past and are not reflective of current land acquisition laws and Department of the Navy's policy.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met with elected officials and community leaders.

1 occupation. I and my family has never lost  
 2 their loyalty to the United States. During the  
 3 war, my own mother had a blouse, blue blouse  
 4 with stars and a skirt with stripes of red,  
 5 white and blue. That's how loyal we were. If  
 6 we have been, if my mom had been caught with  
 7 that, she would have been decapitated.

8 Fortunately, we weren't decapitated.  
 9 But as I said, I love America. Americans are  
 10 great people. I am an American citizen and I  
 11 love that. But the question is, does America  
 12 love me? Does America love me when they're  
 13 going to bring 8,000 Marines in this group to  
 14 affect our life, our culture, our tradition,  
 15 our everything? And in one swoop.

16 Now, we will support America -- I'm too  
 17 young to volunteer. Believe me, I did line up  
 18 to volunteer but they looked at my birth  
 19 certificate and they say, 'Sorry sir, you're  
 20 too old.' But I'm willing, at my age, I'm 73,  
 21 I'm willing to defend the United States under  
 22 any circumstances. But will the United States  
 23 defend me when they take land from us? They've  
 24 got to -- three minutes?

25 It's amazing what time does when you

I-489-004

1 love what you're saying, when you're addressing  
 2 the people, time flies. Thank you, but please,  
 3 three minutes is not enough to mention  
 4 everything that is affecting our life. As good  
 5 as America is, as good as they have been to us,  
 6 we thank them for that. But I don't want them  
 7 to forget that we are good to America. We love  
 8 America but let us ask them to love us back  
 9 because love has a limit. And I have heard  
 10 this young man speak up here, and that limit --  
 11 me I'm old fashioned, boneless. My limit is  
 12 boneless, but not the younger generation. He's  
 13 thanking me, you're welcome.

Thank you for your comment. There were several ways to submit comments on this project during the public comment period. Comments could be made on the project website, in writing at the public hearings, as verbal comments at the public hearings or by mail. Speakers at public hearings who exceeded their 3 minute limit were able to continue providing their comments off-stage with the assistance of a comment recorder at the comment station. Speakers were also able to speak at the microphone a second time if time allowed during the public hearing. DoD limited the amount of time each person spoke at the microphone in order to ensure that every member of the community who wanted to provide a verbal comment had an opportunity to do so.

1                   **COMMENTS BY MS. BERNADITA GRAJEK**

2  
3                   MS. GRAJEK: Thank you very much. Hafa  
4 adai. My name is Bernadita Benavente Panaflor  
5 Grajek, familian Lily. I am from here and  
6 originally from Okkodo. My family just got  
7 their property returned and some of my aunts  
8 are out here in the Harmon Cliff Line area  
9 which was actually Okkodo, so, thank you.

10                   My family has a long history of serving  
11 in and in support of the US military, I'm  
12 extremely proud of my brother who currently is  
13 active duty and lives in Hawaii. He just  
14 returned from Kuwait in August. In addition,  
15 he had served several tours of duty in Iraq and  
16 Afghanistan, so, you see I'm not antimilitary.  
17 I love my brother very much. I love what he's  
18 doing. I just have concerns about this  
19 buildup.

20                   My concerns are the DEIS socio-economic  
21 impact assessment study indicates that the  
22 increase in the island's population due to this  
23 proposed action will also mean an increase in  
24 access to services for the following agency  
25 amongst others. This will peak in 2014.

**I-490-001**

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other federal programs and funding sources that could benefit the people of Guam.

I-490-001

I-490-001

1           The Guam Memorial Hospital, these are  
2 numbers of people now, the Guam Memorial  
3 Hospital, 54,639 people, I just can't imagine  
4 that.    The Department of Public Health and  
5 Social Services, 28,662 people. I didn't make  
6 this up, this is in that report.    The  
7 Department of Mental Health and Substance  
8 Abuse, 28,662 people. And we all know what  
9 we're experiencing with the Department of  
10 Health right now.

11           The Department of Integrated Services  
12 for Individuals with Disabilities, this I just  
13 cannot imagine, 67,880 people. Those of you  
14 with disabilities out there, can you even  
15 imagine?    The Department of Youth Affairs,  
16 10,547 young people. I stopped there and I  
17 said, "You know, you see the 8,000, you see the  
18 80,000 I just can't imagine."    These are  
19 numbers of new people accessing services and  
20 does not include those who were currently  
21 receiving services. This is really important.  
22 Although, we would never deny anyone services  
23 or supports unlike stateside communities Guam  
24 has a cap on its Medicaid. Therefore, does not  
25 have access to Medicaid waivers and does not

1                   **COMMENTS BY MR. JULIAN AGUON**

2  
3                   MR. AGUON: My name is Julian Aguon and  
4 I offer the following testimony in my personal  
5 capacity as an attorney, as a lifetime member  
6 of this community which I love and as a human  
7 being. What I essentially offer is primarily  
8 legal commentary. So as to jog the United  
9 States' memory of its international legal  
10 obligations which the military buildup here at  
11 issue gravely, unjustifiably and illegally  
12 endangers.

13                   There are certain international legal  
14 norms that enjoy preeminent status in  
15 international law. These are known as use  
16 cordial norms, which are accepted and  
17 recognized by the international community as a  
18 whole, as norms from which no derogation is  
19 permitted. Prohibitions against genocide,  
20 slavery, torture, prolonged arbitrary  
21 detention, systematic racial discrimination,  
22 and gross violations of human rights are  
23 examples of such norms.

24                   Today, the right to self-determination  
25 is generally accepted as a use cordial norm.

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action.

Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island's natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-491-001

I-491-001

1 Although attempts have been made to parse the  
2 self-determination norm into two dimensions,  
3 IE, internal and external, the former  
4 understood as a right to authentic self-  
5 government, particularly equal representation  
6 in national government for a certain substate  
7 groups. The latter understood as a right to  
8 reject alien subjugation usually in the context  
9 of colonialism or foreign military occupation.  
10 These terms do not appear as qualifiers of  
11 self-determination in any international law  
12 instrument. Instead, under international law,  
13 self-determination is an alienable right of all  
14 peoples.

15 Numerous covenants and instruments  
16 speak directly to the principle and the right  
17 of self-determination including the UN charter.  
18 The 1966 Human Rights Covenants, that is the  
19 International Covenant On Civil And Political  
20 Rights and the International Covenant,  
21 Economic, Social And Cultural Rights. The  
22 declaration on the granting of independents to  
23 colonial countries and peoples, the declaration  
24 on principles of international law concerning  
25 friendly relations and corporation among states

I-491-001

1 in accordance with the chart of the United  
2 Nations and most recently the declaration on  
3 the rights of indigenous peoples.

4 Article 73 of the UN charter which  
5 addresses the rights of the peoples of the non-  
6 self governing territories which Guam still is,  
7 who commands states administering them to,  
8 "recognize the principle that the interest of  
9 the inhabitants are paramount." These  
10 "administering powers," which the US still is,  
11 except as a "sacred trust obligation to develop  
12 self-government in the territories taking due  
13 accounts of the political aspirations of the  
14 people."

15 The meaning and interpretation of these  
16 articles of the charter had been set out and  
17 made the declarations adopted by the general  
18 assembly. Major conventions have lent further  
19 meaning and growth to the concept of self-  
20 determination both the ICCPR and the ICESCR in  
21 trying it as a right. Approved by the general  
22 assembly in 1966 and legally binding as of  
23 1977, these treaties bind those countries that  
24 ratify them.

25 Today, the classic clause that

**DEPO RESOURCES**

Tel.(671)688-DEPO \* Fax(671)472-3094

I-491-001

1 enshrines a self-determination right is as  
2 follows: all peoples have the right to self-  
3 determination. By virtue of that right, they  
4 freely determine their political status and  
5 freely pursue their economic, social and  
6 cultural development. All this to say, the  
7 militarization on Guam now underway is illegal  
8 under any principled construction of  
9 international law, indeed, the general assembly  
10 of the UN repeatedly affirms its "strong  
11 conviction" that the militarization of Guam  
12 poses a potentially major impediment to the  
13 implementation of the declaration on the  
14 granting of independents to colonial countries  
15 and peoples.

16 Moreover, Resolution 2625 unequivocally  
17 declares "none self governing territory has  
18 under the charter a status separate and  
19 distinct from the territory of the state  
20 administering it. And such separate and  
21 distinct status under the charter shall exist  
22 until the people of the lands of governing  
23 territory have exercised the right of self-  
24 determination." Given this, given all of these  
25 law, if the US proceeds in its plans for Guam

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

I-491-001

1 in this fashion, then it cannot seriously  
 2 attempt to constitute a legitimate democracy as  
 3 long as it continues to violate these very  
 4 fundamental principles of international law.

I-491-002

5 Finally, this process is absurd even in  
 6 a domestic sense, even from a very basic  
 7 American law prospective. In a normal run of  
 8 the mill lawsuit, two or more parties are  
 9 involved. IE an opposite sides of the V. Both  
 10 sides are given an opportunity to brief the  
 11 issue involved, that is, both sides get to  
 12 build a case and make an arguments. It is  
 13 astonishing that the most powerful country on  
 14 earth can get 5 years to make a case and a  
 15 small resource poor island only 90 days.

I-491-003

16 But lastly, because the delicate  
 17 sensibilities of jurist prudence at times must  
 18 be abandoned for a moral feral howl, let it be  
 19 known that the people of Guam are the heirs of  
 20 a civilization born 2000 years before Jesus. A  
 21 civilization with its own stories, its own  
 22 unique, unshared, wildly precious version of  
 23 what it means to be human on this planet. We  
 24 have no intention to let down our hair, retreat  
 25 to our bedrooms and ready ourselves for bed.

26

 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-491-002**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**I-491-003**

Thank you for your comment.

1           **COMMENTS BY MR. HOWARD HEMSING (MAGA LAHI)**

2  
3           MR. MAGA LAHI: [speaks in the Chamorro  
4 Language; Yeh, right? That's what we like to  
5 say is yes, but we have no say. That's it].  
6 For four days, four different times I've been  
7 attending all of it, promoting independence.  
8 And it is a good feeling to see a lot of people  
9 attending this conference. But we all know  
10 that the US is going to do as they please,  
11 right?

12           So, how do you end the problems? There  
13 is a teaching from the elders, they said when  
14 there is a problem, you take the problem by the  
15 roots and you uplift it, you pull it out of the  
16 ground. You will kill the problem. You don't  
17 trim the branches. So what is the problem?  
18 This island belongs to the United States, the  
19 United States will do as they please on this  
20 island whether you like it or you don't.

21           Look at this DEIS, they've been  
22 planning this for years. And we want the  
23 problems of Okinawa here on Guam, they're going  
24 to be raping our women; is that what we want?  
25 What is wrong with the people of Guam? Why

**DEPO RESOURCES**

**I-492-001**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-492-001

I-492-001

1 don't you want independence? That's how you  
 2 pull the problem out. That's how you end the  
 3 problem. It has become your own master, not a  
 4 country thousands and thousands of miles away,  
 5 become your own master. Like we used to do,  
 6 we are the island that had no murderers. We  
 7 had no thieves. We had no cheating. We had no  
 8 lying. And we live naked from time of birth to  
 9 time of death. We are the people; our heritage  
 10 is the giants who roam the earth. We are the  
 11 first world navigators. We invented the  
 12 sakman, the flying proa.

13 For those that don't know what a sakman  
 14 is, it's the flying proa, which gave the  
 15 ability for the aircraft architect to get the  
 16 principles of trust for lift. That's why the  
 17 first plane flew. It was because of our  
 18 heritage, our invention, our blood, our people  
 19 that made that happen.

20 What is wrong with us today? Do we  
 21 believe the liars? Wow! We're very good, huh?  
 22 We're Number 1 in the world. We are the Number  
 23 1 believers of liars. The US speaks with a  
 24 forked tongue. I did not write that down, the  
 25 true Americans wrote that down. The true

The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

1 Americans are the Indians. And then July 4<sup>th</sup>  
2 they still say, "Yankee, go home." In Okinawa  
3 they say, "Yankee, go home." In Guam, the  
4 congress woman and the governor is saying,  
5 "Come to Guam, come, come." They are saying,  
6 "Respect the Marines." I thought I was taught  
7 to believe that when you travel to somebody's  
8 house and land, you are supposed to show  
9 respect. Why do we, as the native, must show  
10 respect to the foreigners in our land? Why  
11 can't they show us respect? Why?  
12 Independence! "Yankee, go home."

COMMENTS BY MR. CARL PETERSON

1  
2  
3 MR. PETERSON: Thank you Cliff. My  
4 name is Carl Peterson. I live in the village  
5 of Tamuning, I've lived on Guam for 44 years.  
6 My wife is from Guam. All my children were  
7 born on Guam. Couple of them live in the  
8 States; I wish they could come back, but we're  
9 Guamanians, I expect to be buried here.

I-493-001

10 We've all heard about the compact of  
11 free association. Today, we saw the numbers  
12 from the Department of Interior, that 18,000 of  
13 our neighbors moved to Guam as a result of that  
14 compact of association, compact free  
15 association. The Micronesian survey shows that  
16 20,000 currently live here, 2,000 I guess,  
17 2,000 new babies were born. But the point is  
18 that 18,000 people came to Guam and we found  
19 jobs for them. They have jobs on Guam where  
20 the great majority of them have jobs on Guam.  
21 The difference between this and the buildup is  
22 the buildup is going to be bringing jobs to us  
23 and it gives great opportunity for people on  
24 Guam to get very good jobs.

25 Tomorrow morning about 10,000 of our

**DEPO RESOURCES**

I-493-001

1 own people are going to wake up and probably  
2 put on the uniform, the United States military.  
3 2,000 of them are right here in Guam, they're  
4 in the National Guard and the Air Guard.  
5 They're proud Guamanians, they're proud  
6 soldiers, and they are looking for  
7 opportunities also.

8 Back in the '90s, we had 25,000 people  
9 move off island because of the economic  
10 turndown. They moved off island because they  
11 wanted to care for their families and find jobs  
12 that would be able to care for their families.  
13 I believe a lot of them want to come home, but  
14 they can't come home if there's no jobs for  
15 them. And with this buildup, at least we have  
16 the potential to find jobs for them.

17 I'm in the financial planning business  
18 and we try to help people get from A to B  
19 financially. I just want to share that those  
20 of you that put your land to use, to put it  
21 productively use and you lease it or sell it  
22 and whatever you do. A lot of people create  
23 generational trust so that, that income from  
24 that land can serve many generations in  
25 perpetuity. Make the land work for you if

COMMENTS BY MS. ANJELICA BAMBA

1  
2  
3 MS. BAMBA: My name is Anjelica Bamba.  
4 I'm 17 and I'm from the village of Maite. This  
5 is our island. We are indigenous to Guam. And  
6 I don't recall you asking us if you could dump  
7 80,000 people here. Because when you first  
8 mentioned it, you told us 8,000. You said it  
9 was just going to be a base move and now you  
10 are taking our lands to accommodate your  
11 soldiers and their families. What about our  
12 people? You're enticing us with visions of  
13 more jobs, more money, more opportunities.  
14 Great, you are going to give us money for the  
15 improvements of our hospital. Yeah, you  
16 better, because with the 60,000 pounds of toxic  
17 waste that you are going to be dumping a year  
18 while you're here, we are going to need it.  
19 Did you think about how this is going  
20 to affect our generations to come? The DEIS  
21 states that the teacher to student ratio is 19  
22 to 1 teacher. And now, when the buildup starts  
23 we are going to expect a 20% increase. Hmm,  
24 I'm thinking they need to do their homework.  
25 Maybe you should try being me for a day. A

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-494-002**

Thank you for your comment. Numbers in the DEIS document represent average teacher student ratios that are affected by high ratios in the North but lower ratios in the public schools in the Southern part of Guam. Data used in the analysis were derived from surveys and interviews performed in conjunction with the DEIS, and serve as a point-in-time indication of staffing levels. It is acknowledged that it is not possible for this analysis to capture all requirements of GovGuam agencies. It is expected that the Fiscal Impact Assessment, conducted by GovGuam consultants and funded by the Department of Defense Office of Economic Adjustment, will be able to more fully capture recent public service fluctuations, and provide a more detailed indication of fiscal impacts to GovGuam agencies.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

I-494-002

1 child of Guam, I go to a public school. I am  
2 in those classrooms. I walk those crowded  
3 hallways and in my second period, there were 41  
4 kids in one class. I'm no mathematician, but  
5 you're wrong. You're coming in to a system

I-494-003

6 that is already corrupt. You will take our  
7 strong ifet wood. Our mango trees, our  
8 beautiful and unique tropical scenery and turn  
9 it into concrete jungles.

10 We, the youth, we are the future of  
11 this island. Wake up, if they take our land  
12 away how will we learn our culture. Military  
13 personnel, thank you for attempting to help but  
14 you have overstayed your welcome.

**I-494-003**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

Thank you for your comment.

1                   COMMENTS BY MR. ERNEST WUSSTIG

2

3                   MR. WUSSTIG: Moment of silent please.

4 My name is Ernie Wusstig. I was born and

5 raised here on Guam. You know, listening to

6 everybody tonight, I know it, that we are no

7 dummies. I know it all the time. Right after

8 World War II, they went and go in and take a

9 lot of land. But now, the Chamorros are

10 speaking up, pay up, pay up.

11                   If this is really going to go on the

12 record and it's going to make an impact on this

13 EIS, please, listen to all the speakers

14 tonight. It's a -- the people are really,

15 really speaking up. They are speaking up about

16 the hurt, the hurt for the last 70 years, 70

17 years.

18                   You know, I am a proud American and I

19 am a proud Chamorro, too and no one is going to

20 take that away from me, no one. I spent 23

21 years in the mainland but my heart is always

22 here. It's always here. I've learned to live

23 with everybody back in United States. Every

24 child, every Marine that is coming out here

25 they do have a mother, you know? They all have

1 mothers and we -- let me get to the point.  
 2 Like one speaker said, "Respeto, respect", the  
 3 Marines are to educate the Marine boys that are  
 4 coming out here to respect us and respect the  
 5 culture, respect us, [speaks in the Chamorro  
 6 language; that's all we want is to respect us].

I-495-003

7 Now, I hope I still got one minute. In  
 8 agriculture section, I hope the military will  
 9 buy the local produce, right now we cannot sell  
 10 in the base unless it goes through an agent.  
 11 And if that agent is not pushing for it, we're  
 12 not able to sell in the military and I hope  
 13 they can hear that loud and clear. So, listen  
 14 everyone else, listen everybody, if you're  
 15 looking over here, if the cameras at me, listen  
 16 to all the speakers because the Chamorro people  
 17 are not dummy. We are in the same level, look  
 18 at us eye-to-eye and listen to all the  
 19 concerns. Thank you.

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

1                   **COMMENTS BY MS. TALINA NELSON**

2  
3                   MS. NELSON: Buenas and hafa adai, I am  
4 Talina Nelson, please bear with me. I like to  
5 procrastinate. The newspaper today reads, the  
6 coming military buildup will bring more planes,  
7 more missions and more noise. Additional noise  
8 will fill more frustration and create more  
9 uncomfortable nights; is that all our  
10 journalist could come up with after a three and  
11 a half hour public meeting that took place last  
12 night in Yigo? What about the pristine lands  
13 in Sassagua Valley that the military looks to  
14 and will acquire for the firing range? This is  
15 despite whether the families are willing to  
16 negotiate with the Department of Defense.

17                   The PDN failed to mention that Taraque  
18 beach, which is already owned by the military,  
19 is a much more convenient location as it is  
20 already located inside the base. It also  
21 failed to mention the inefficient testing of  
22 radioactive materials in Apra Harbor and the  
23 test they had performed that had only gone one  
24 inch beneath the surface. And they find this  
25 accurate and valid to give to the people of

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-496-002**

Thank you for your comment. Information on this issue has been updated and is included in Volume 4 for this FEIS.

I-496-001

I-496-002

1 Guam.

2 Now, I have to go to my phone. It also  
3 failed to mention the lack of a proactive  
4 presence by our local elected officials on the  
5 people of Guam's behalf. Where are our  
6 leaders? We need you now! We voted for you,  
7 we trusted at you to protect our best interest.

9 and trusted men? I see that beautiful picture  
10 every day I pass by Chalan Pago, Dededo,  
11 Barrigada, where are you? When will the  
12 partial and biasness of information given to  
13 the people of Guam end? It must end now.

14 In the DEIS Volume 2, Chapter 16, Page  
15 1055, according to the grid on this page, Guam  
16 residents are projected to receive less  
17 constructed jobs than off island workers. Guam  
18 residents look to capture only 2,556 jobs,  
19 while off island workers will claim 15,557. It  
20 is also known the United States has a cap of  
21 66,000 H2B workers allowed to enter within the  
22 entire United States. But the cap of H2  
23 workers on Guam allowed to occupy our tiny  
24 island has been lifted. What will our local  
25 leaders do about this? We must have a

### I-496-003

Thank you for your comment. Anticipated impacts on employment are discussed in detail in Section 4.3.1 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F in Volume 9 of the EIS. Subsection 4.3.1.2, entitled Probable Labor Supply Sources, discusses the available Guam construction labor supply and the need for foreign workers for construction. The amount of jobs going to Guam residents is discussed in this subsection and states:

"Current Guam Residents: As of 2007, Guam had a total employed construction workforce of approximately 5,600 people, although only 4,600 were "production workers" and about 1,000 of these were temporary foreign workers (Guam Department of Labor, 2008)."

The Guam Contractors Association (GCA), in late 2006, established a nonprofit "Trades Academy" to train residents for employment at all levels of the construction industry. Also, the Center for Micronesian Empowerment (CME) has obtained seed funding, and is seeking additional funds, to implement a program of both social assistance and job training (Appendix D of the SIAS - CME Interview). The GCA Trades Academy would make part of its 8,000-square-foot training facility available to the CME if the program is able to move forward.

The SIAS estimated the amount of qualified Guam construction workers that would likely fill these construction jobs. Because of the limited supply of Guam construction workers, the on-island workers were determined to be relatively small during the construction years.

I-496-003

I-496-003

1 reasonable and responsible cap.

I-496-004

2           The EIS also says that all military  
3 coming into Guam will receive cultural  
4 sensitivity classes. My concern is, will this  
5 class consist of a half hour overview  
6 PowerPoint on the various location of Guam  
7 where they can go to find great food, great  
8 beer and fun? Or will it mention the effects  
9 of the Brown Tree snakes and receive warnings  
10 to stay away from all wildlife? Or will there  
11 be a class, a semester-long journey into the  
12 history of Guam informing them about how the  
13 military stole our lands from our grandparents  
14 and great grandparents at gunpoint after World  
15 War II? Will you tell them that you abandoned  
16 the people of Guam when you received intel of  
17 the Japanese invasion? Will you tell them how  
18 the Chamorro women also, were also victims of  
19 rape by men in uniform? Will you tell them of  
20 all the toxins that you left to leak into our  
21 lands and have yet to clean it up? Will you  
22 tell them of the mass explosion of DDT which is  
23 truly responsible for the extinction of our  
24 local birds? Will you tell them of our close-  
25 knit extended families that will come after

**I-496-004**

Thank you for your comment. Cultural sensitivity classes are proposed as mitigation. The Navy, Marine Corps and Army conduct orientation and refresher classes that address issues relevant to a specific geographical area, including cultural sensitivity and environmental issues. The formats, duration and frequency of training varies among the military services. The education programs for the build-up on Guam have not been developed.

Topics such as war experiences, war reparations, and veterans' benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

MS. TEDTAOTAO: My name is J Rae Tedtaotao, I'm 18 years old. I'm from the village of Yona. I couldn't really write anything for tonight but I'm going to say the same thing I said yesterday because I'm still trying to say the same message.

So, Guahan, pay attention, this is the language they used, do you see what they're doing, this is exactly like recruiting, they used prose as persuasion. We see benefits as temptation but the thought of our future should cause us hesitation, it should make us ask questions like, why are the people who call this island home, the same people up here giving reasons for you not to take pieces of it, it should be you begging to use it not us begging to save it. Guahan, do not stand at ease, do not fall back, do not retreat, stand on your feet and protect our culture, our history and our future. Take our home, tattoo it on your collar bones because no rank in this building can ever be higher than that.

Guahan, this is our battle, you are the

1 battalion like my brother John Sarmiento said,  
2 "Our words are our weapons". So, let's beat  
3 them until purple is part of their patriotic  
4 colors, we have already bled so much red for  
5 them, we've heard so many of their white lies.  
6 Let's not sit and watch them bit us until we  
7 are blue.

8 My brothers and sisters, we must fight  
9 for the future generations of Guahan and we  
10 must continue fighting until they are no longer  
11 in harm's way. Let them look back and know  
12 that the people before them fought for who they  
13 are. Let them look back and know that the  
14 people before them fought for the land they are  
15 from. Let them look back and know that the  
16 people before their time fought to save the  
17 only set of rules that they can ever truly  
18 identify with, and let it be known that if you  
19 want to treat the people of this island like  
20 dogs then you'd be better expecting a hell of a  
21 bite. Do not label us as anti military, we are  
22 pro-survival of Guahan. Do not label us as  
23 haters, we just have so much love for this  
24 island, do not label us as US territory, when  
25 in front of your interviewing cameras, you call

### I-498-001

Thank you for your comment. The proposed location of the new Navy wharf was chosen as the least environmentally damaging alternative in efforts to avoid the least amount of live coral in the area. The proposed dredge area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. The proposed dredged area consists mainly of a sand, rubble, and algae zone. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. Direct impacts of dredging to the shoal areas within Apra Harbor (Western Shoals, Middle Shoals, Jade Shoals, and Big Blue Reef) will be avoided. The indirect impacts (from sedimentation) to these areas from in-water activities will also be avoided based on computer tide/current modeling performed within the project area (see Volume 4, Chapter 11).

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

### I-498-002

Thank you for your comment. Several mitigation measures have been proposed. Adaptive program management would alleviate construction

# OUR ISLAND OUR LIVES

## Personal Statement/Comment Form

noise and the force flow reduction mitigation measure would further noise impacts by lowering peak population levels during construction.

### I-498-003

Thank you for your comment. The DoN is developing a Micronesia Biosecurity Plan (MBP) to address potential non-native invasive species impacts associated with this EIS as well as to provide a plan for a comprehensive regional approach. The MBP will include risk assessments for non-native invasive species throughout Micronesia and procedures to avoid, minimize, and mitigate these risks. It is being developed in conjunction with experts within other Federal agencies including the National Invasive Species Council (NISC), U.S. Department of Agriculture Animal and Plant Health Inspection Service (USDA-APHIS), the US. Geological Survey (USGS), and the Smithsonian Environmental Research Center (SERC). The plan is intended to be a comprehensive evaluation of risks in the region, including all Marine Corps and Navy actions on Guam and Tinian. The Navy will develop biosecurity measures also proposed in this EIS to address non-native invasive species that will supplement existing practices. For additional information on the MBP and existing and interim measures for non-native invasive species control, please refer to Volume 2, Chapter 10, Section 10.2.2.6 for terrestrial species and Volume 2, Chapter 11, Section 11.2.2.6 for marine species. Volume 2 Chapter 14 has been updated to include information on projected increased marine traffic associated with both organic growth and increases due to the military buildup.

For endangered species and habitats, the Navy has worked with USFWS Pacific Fish and Wildlife Office in the development of conservation measures to minimize or avoid effects associated with the proposed action on species and habitats protected by the Endangered Species Act.

**I-498-004**

Thank you for your comment. The U.S. Marine Corps has stringent requirements for all pets as outlined in an existing Marine Corps Order that applies to all personnel. All Marine Corps personnel with pets in government-owned housing and in public-private venture housing must be implanted with a microchip so they can be tracked. These measures will prevent dumping unwanted animals and will prevent feral animals that could harm wildlife. This information has been added to the FEIS. Completely private housing off-base would be subject to Guam laws and regulations. DoD will work with the local animal shelter to the extent possible.

Thank you for your comment.

I-499-001

1                   **COMMENTS BY DR. PATRICIA TAIMANGLO**  
2  
3                   MS. TAIMANGLO:    Buenas and hafa adai  
4 [speaks in the Chamorro language; my name is  
5 Patricia Taimanglo, Patricia Leon Guerrero  
6 Taimanglo, from Barrigada. Today I stay in  
7 Yigo]. I am so happy. What is happening here  
8 tonight is incredibly healthy. All of you who  
9 are not from this land, I want you to step in  
10 our shoes. I want you to imagine that your  
11 grandparents, that your parents, that your  
12 great, great grandparents, such your ancestors  
13 live on this land, breathed, raise the  
14 children. This is not the first buildup, it's  
15 silly to think it's true.  
16                   First buildup, Spanish. What's the  
17 outcome? Genocide. Our men went from island  
18 to island and fought. They did not lie down  
19 and take this. They did not say take it all.  
20 We fought. They fought to the end. That's our  
21 first buildup. 1898, those of you who are not  
22 from here, I appeal to all of you, back there,  
23 hello, hello. This is not my time. You back  
24 there, if you are not from this land you have  
25 to sit and listen, you wear the badges, you

**DEPO RESOURCES**  
George B. Castro

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-499-002**

Comment noted.

**I-499-002**

1 wear the stripes, and you do not listen. You  
 2 need to listen because so much richness is  
 3 being conveyed. It's insulting that you talk  
 4 and chat. If you want to be a part of this,  
 5 you need to learn.

**I-499-003**

6 So, first buildup, Spanish, they wanted  
 7 to kill us all. 1898, no choice,  
 8 Americanization. Not so bad, but they made  
 9 some major changes to our culture and to our  
 10 people. And then you know what, we fell in  
 11 love with them, benevolence. And then you know  
 12 what they did, they abandoned us. They  
 13 abandoned us so that the Japanese can come and  
 14 kill us all. So what do you do, how can I  
 15 trust you, how can we trust you?

16 Now, please don't get distracted, I  
 17 want you to still pay attention. How can we  
 18 trust that you care about any of the people in  
 19 this room, or any people on this island? You  
 20 abandoned us so that we could be destroyed.  
 21 How do we know that? You evacuated your  
 22 dependents and active duty soldiers, and you  
 23 left a handful of people to defend Guam. You  
 24 are going to do this to us again, I know that.  
 25 Why? Because it's a country based on false

1 promises all the way back to its origin. You  
 2 fought 1776 because you did not want to be a  
 3 colony. You did not want to be oppressed by  
 4 the British. And you know what, you expect all  
 5 of us to lie down and say, "Oh, yeah, destroy  
 6 our oceans." You destroy my ocean, I'll tell  
 7 you, I am so, so upset. Would you have  
 8 somebody -- 80,000 people -- please, Clifford.

9 MR. GUZMAN: There are many, many  
 10 people who want to speak

11 MS. TAIMANGLO: No, no, please, please  
 12 respect me. I think -- do you want me to stop?

13 PUBLIC: No.

14 MS. TAIMANGLO: The words all night  
 15 Clifford have been incredible. There are so  
 16 much wisdom, but I am speaking to all the  
 17 people here who are not from this land.  
 18 Everything that has been said is true and what  
 19 I mean is that the Draft EIS, Environmental  
 20 Impact Study is a wonderful notion but it  
 21 pretends that there is nobody living here. I  
 22 am sorry. When you -- Bernie Grajek, I am a  
 23 psychologist, I am a doctor and I will close  
 24 this with, you know what it is like for me to  
 25 go on base? I will tell you, it is the most

I-499-005

I-499-004

Thank you for your comment.

I-499-005

Thank you for your comment. The impacts of crimes on Guam are discussed in Volume 2 of the Final EIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

MR. SABLAN: Hafa adai. This is a little poem I wrote. It's called "Uncle Steven", anyways here we go. Uncle Sam, do you understand? You rip our hearts from our chest. Tears pure out our eyes and fall into our hands. Our hands you've used, your guns, your wars, our lives, our scars. For you, we fought. For you, we've killed. Yet our wounds never heal. After World War II, you made your deal. Didn't ask us, just decided to steal. You bound our spirit, cut off our tongue, and stole our lands. Yet we stand still side by side, ready for your next command. But Uncle Sam, do you understand, we are Guahan, we are Sassagua, we are Pagat, we are Latte, Sinahi, Magas, and Maga Lahi.

Uncle Sam, you stir our anger and resentment, and tend to bring nuclear subs, overcrowding and pollution, take our lands, pollute our ocean is your solution. But beware Uncle Sam, Chamorro rise up, revolution. Uncle Sam, you don't understand, it's bigger than words, bigger than slam, bigger than man,

1 bigger than lands. It's human rights and our  
2 God-given freedom, so Uncle Sam, I say we're  
3 brown and we're down. Never forget we've used  
4 your guns in our hands. So don't beat us down  
5 and bury us alive in our own sands. Uncle Sam,  
6 don't pollute our waters, and don't take our  
7 lands.

8 In closing, let us make a deal, give us  
9 SD, Miami, and NYC, and let's call it even  
10 Uncle Steven. And one more word guys, some of  
11 top poets out here like John Sarmiento and  
12 Melvin, thanks to you guys and I'm going to be  
13 doing some visual poetry music videos for them  
14 during their pieces in the lands that the US  
15 intends to take from us. I've already shot two  
16 pieces, one today in Marble Cave, one yesterday  
17 in Santa Rosa. But check it out 66 degrees, 66  
18 tube on YouTube, I know everybody you tubes.  
19 It will be up there for you guys between two  
20 weeks, 66 tube, all the top poets in our lands,  
21 they are not going to take it.

1                   **COMMENTS BY MR. BRIAN SHYBULL**

2

3                   MR. SHYBULL:    Good evening, I am a

4 white Anglo-Saxon protestant, born and raised

5 in United State of America.    However, my

6 heritage, the lessons that I was taught by my

7 mother and father, the lessons that was taught

8 by my ethnic teachers in United States were

9 lessons of a freedom fighter.   My son is a 7-

10 year-old Chamaoli.   I have two stepsons who are

11 Chamorro.    They're big problems in United

12 States.   I can tell you this because I've been

13 watching really closely.   There is a march on

14 Washington plan for April 15, 2010.   American

15 freedom fighters are very upset with their own

16 government.   Very, very upset for the first

17 time in a long time.   Now is the time, the

18 freedom on this island is Chamorro freedom.

19 The reason now is the time is because my mother

20 and father-in-law, that generation is a

21 generation that has a fully intact language.

22 My wife's generation, less than 50% speak the

23 Chamorro language and my son's generation less

24 than 10%.   Okay?

25                   If you draw that curve, okay, that is a

**I-501-001**

Thank you for your comment. Topics such as the political status also commonly referred to as "decolonization" and "self-determination" of Guam are important issues but are not part of the proposed action. DoD recognizes the importance of reducing adverse socio-economic and cultural change effects on the people of Guam, the island's natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-501-001

I-501-001

1 very steep curve over three generations. Okay,  
2 my mother and father-in-law's generation has  
3 got 20 years tops, maybe 30. Now is the time  
4 for Chamorro freedom. I'll read this. During  
5 this public hearing, the Chamorro people and  
6 the people of Guam have laid out a petition to  
7 the American public. Let us decide as a free  
8 people if we want more occupation on our land.  
9 Give us the respect and the recognition we  
10 deserve as God's free people to determine our  
11 own future here on the Guam homeland. I have  
12 been told by many that my EIS comments will not  
13 be considered if they are related to issues of  
14 freedom. Well, I say issues of freedom and  
15 self-determination are exactly specific to the  
16 EIS. The EIS was written by free American  
17 contractors employed by the free people of the  
18 United States government, a United States  
19 government who's sacred responsibility it is to  
20 protect the freedom of all people born under  
21 the creator of this world.

22 Furthermore, the EIS is a democratic  
23 document founded in the National Environmental  
24 Policy Act. A democratic act founded in the  
25 laws of a democratic nation whose foundation

**DEPO RESOURCES**

I-501-001

1 are the great documents of freedom, the  
2 constitution, and the bill of rights.  
3 Fundamentally, the EIS is a document written by  
4 free people. Normally, it's written by free  
5 people for free people.

6           However, we know the people of Guam are  
7 not free. Therefore, General Bice, this EIS  
8 has no authority on Guam. The enlisted  
9 personnel and the civil servants of the United  
10 States are required first and foremost to  
11 protect the freedoms of the constitution.  
12 Those freedoms are ordained by the creator and  
13 belong to all people in this world.

14           So, here is my EIS question of the  
15 night, and General Bice you can take this  
16 question to your superiors and pose this  
17 question on behalf of the occupied people of  
18 Guam. The question, how does the United  
19 States, a free country, propose to impose a  
20 policy document, founded in freedom, on the  
21 people of Guam who have not yet been granted  
22 the full measure of freedom ordained by God to  
23 choose for themselves the future of their  
24 homeland? The only reasonable answer, General  
25 Bice, you can't impose this document or this

1 military buildup on the people of Guam unless  
2 you plan to continue imperialism on the  
3 occupied people of Guam.

4         Four steps to righteousness, General  
5 Bice. Step one, end the occupation of Guam.  
6 Step two, honor our wishes to exercise our  
7 manifest destiny in our homeland of Guam. Step  
8 three, recognize the vote of our Guam senators  
9 who will decide if we are in agreement with  
10 this buildup. Step four, join us as a free  
11 people of Guam to mutually determine the future  
12 peace and prosperity of this Western Pacific  
13 Region.

**I-502-001**

Thank you for your comment.

As identified in the EIS, the proposed dredged area within the active commercial and DoD harbor was previously dredged over 60-years ago and maintenance dredging continues. Yes, significant unavoidable impacts will be seen to coral reef, other immobile invertebrates, and some site-attached reef fish as identified in the EIS. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing short-term and localized impacts. To lessen impacts, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months.

Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam.

Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

1                   **COMMENTS BY MS. F. CASTRO**

2

3                   MS. CASTRO: I'm going to read off a

5 reading the prettied up version of the DEIS

6 that you can get at the table at the front.

7 When and how did the military buildup involving

8 the relocation of marines from Okinawa change

9 to now include the dredging of Apra Harbor for

10 nuclear powered aircraft carriers and an Army

11 missile defense force? Who approved? When and

12 whose input was sought? Why are details only

13 now emerging? Divide and conquer?

I-503-001

14                   Solid waste; why is solid waste being

15 disposed of at a Navy landfill at Apra Harbor?

16 No concern that trash and water are a bad

17 combination? How long has this existed? Is

18 EPA fully approving such a disastrous activity?

19 And finally, why is quality of life ensured for

20 military personnel and dependents yet never

21 once mentioned for civilian population? Is

22 there a double standard that exists in this and

23 all other regards?

I-503-002

24                   I'm now going to read my own questions

25 and comments. First off, there is an

I-503-003

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-503-001**

Thank you for your comment. The proposed action has included the Marine relocation, improvements to support a transient nuclear aircraft carrier, and an Army Missile Task Force since the Notice of Intent (NOI) to prepare an EIS was published in the Federal Register on March 7, 2007 (72 Federal Register 10186). The public scoping meetings held on April 17 and 18, 2007 on Guam, and April 19 and 20, 2007 on Saipan and Tinian, respectively, informed the public of the proposed actions. Further details on the public outreach and information are contained in Section 1.8 of Volume 1 and Appendix A in Volume 9.

**I-503-002**

Thank you for your comment. The Navy Sanitary Landfill at Apra Harbor is located interior from the ocean and is not located within a body of water. The landfill has been in existence for many years and is operated with the approval of the Guam Environmental Protection Agency and complies with Guam's solid waste regulations.

**I-503-003**

Thank you for your comment. Please see Volume 2, Chapter 16 Section 16.1.6.5 for discussion on Quality of Life.

I-503-004 | 1 insufficient comment period given the immensity  
 2 of this military expansion project. Public  
 3 hearing should be held at every village.

I-503-005 | 4 Second off, will the US be training with and or  
 5 storing depleted uranium? Will military  
 6 vehicles on land, air, or sea be armed or  
 7 armored with depleted uranium? What is the  
 8 projected volume of waste that will be dumped  
 9 into the ocean by transient nuclear powered  
 10 aircraft carriers?

I-503-006 | 11 I'm now going to comment on the DEIS.  
 12 The population estimates of a peak increase in  
 13 2014 of nearly 80,000 people to a decrease of  
 14 33,680 people are inaccurate as they fail to  
 15 take into account that Guahan has been made a  
 16 US port of entry. I recommend that any section  
 17 of the DEIS that contains the words develop or  
 18 improve should be changed to reflect the true  
 19 nature of this expansion.

I-503-007 | 20 Therefore, in place of the words of  
 21 develop and improve, please insert the words  
 22 mal-develop and degrade. I recommended that  
 23 the lands currently occupied by the military  
 24 from Talogi (phonetic) at Andersen Air Force  
 25 Base, all the way to Sumay be cleaned up and

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-503-004**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

**I-503-005**

Thank you for your comment. Training with depleted uranium rounds is not proposed within the scope of the Guam and CNMI Military Relocation. Volume 6 discussion of wastes include estimates associated with a transiting aircraft carrier. Both solid waste and wastewater would be handled by onshore services. The ships would not discharge any waste within proximity of Guam (3 nautical miles) and would follow DoD requirements.

**I-503-006**

Thank you for your comment.

**I-503-007**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

I-503-007

1 returned to those families from whom they were  
2 immorally taken from.

3           And finally, I recommend that the US  
4 revisit its obligation under UN mandates, an  
5 obligation that the US Government itself  
6 initiated by self-proclaiming its trusteeship  
7 over Micronesia and Guahan to decolonize. And  
8 my poem for the evening is, "General Bice, this  
9 buildup ain't nice. What has been taken, it  
10 must be returned. Decolonize, don't  
11 militarize." Saina ma'ase.

1                   COMMENTS BY MS. ROSE PEREZ TAITANO

2

3                   MR. TAITANO: [speaks in the Chamorro  
4 language; good evening to all you people.  
5 Blessings to you who came out tonight. I am  
6 feeling sick right now, that's why I am eating  
7 halls. I will come again tomorrow, depending  
8 what the Lord has in store for me].

I-504-001

9                   For the respect that they never give  
10 us, I'm going to start speaking English for  
11 this evening. Majority of our young people  
12 were prohibited from learning our language so  
13 I'm following through with the mandate. It's  
14 so unique where the military just leans on the  
15 post and they giggle, they're not even  
16 listening to me to me, I bet you.

17                   You know, it's so sad, it's really sad.  
18 I have attended a similar meeting over last  
19 year and a half ago over at Hilton. I don't  
20 know if you remember but a lot of our locals  
21 speak up and told them no and of course the two  
22 Marines guys Sgambelluri and you know who. The  
23 Marines, the Marines, they're really backing up  
24 their men. Retired or not, they are still  
25 Marines, excuse me, you're out because you're

**DEPO RESOURCES**

1 old. Retire and enjoy life, go to Guam  
2 paradise.

3 You have ruined it. You have ruined  
4 it, World War II, ruined our peace of paradise.  
5 We're all trying to survive from all the, you  
6 know, from being choked left to right by your,  
7 what do you call that, dictators. You call it,  
8 I don't know what you call yourself but you are  
9 definitely dictators. If I could say you guys  
10 are -- I think Ben said that last night, you  
11 guys are liars, you guys are thieves, right?  
12 Liars and thieves. I can prove that.

13 Guess where you got your language  
14 English? England. You stole it. You  
15 understood what stealing is? Steal of a --  
16 steal in the night. In the bible, when the  
17 Lord comes second time -- come back second  
18 time, is like a thief in the night, you don't  
19 know, maybe you're sleeping, maybe you're  
20 driving, maybe you're dancing, it don't matter.  
21 But when the Lord say it's time for him to come  
22 back and bring all the good people in, float  
23 them up in the air. The bad ones, I don't  
24 know, I think there's -- they're going to stay  
25 here for seven years on the world as it is now,

1 suffer, famine, starvation, but they won't die,  
2 that was what the Lord said. And then the Jew  
3 even till this day they don't believe the Lord  
4 came but they're the Lord's people. We're  
5 Chamorro, they're Jews. The Lord is Jew, okay?

6 Now, we understood. The Jews are 40  
7 years in the dessert looking for Israel, the  
8 land of the Israelites. But the Lord gave  
9 them, I think seven [speaks in the Chamorro  
10 language; bosses, sergeants to find the land.  
11 Those 40 years in the land of the dessert. The  
12 Lord helped them because the] Jews is His  
13 blood, okay? Race blood. [speaks in the  
14 Chamorro language; here is what you need to  
15 understand. The Lord -- in the second coming,  
16 that is what is going to happen He is going to  
17 wipeout Israel] and when that time comes then  
18 the Jew will realize that oh, my goodness He  
19 was here. This is his second coming. Then  
20 they will run out and go to, you know, the  
21 Lord. Lord, we believe you now. Amen.

22 So, as far as punishment for you guys,  
23 I believe you have to -- how do you say it,  
24 take it up with the master. Heaven's not open  
25 for guys like you. Dictator's is out of the

1                   **COMMENTS BY MS. STEPHANIE MENDIOLA**

2  
3                   MS. MENDIOLA:     Hafa Adai.     I am  
4 Stephanie Mendiola.   I'm a 25 year old daughter  
5 of Guahan from the villages of Sinajana and  
6 Mangilao.   And this is my technical response to  
7 the DEIS.

8                   In volume 1, Page ES-7 Table ES-2,  
9 please expand your estimated total population  
10 increase on Guam to include education of that  
11 buildup population with an estimated growth of  
12 1.5% per year, then at the daily tourist impact  
13 population and that will show the real impact  
14 on the population which is that there will be  
15 over 280,000 people on our tiny island just 31  
16 miles long and 4 to 8 miles wide.

17                   In volume 2, Table 2.2-1 considers the  
18 needs of facilities for the very in population  
19 from operations to education to health care and  
20 recreation.   Why do gyms, grocery stores and  
21 swimming pools need to be behind security  
22 fences?   Consider, that as you enhance your way  
23 of life you are destroying ours.

24                   In Volume 2, Page 10-8, you identify  
25 Guam listed endangered species as those

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-505-001**

Thank you for your comment. The population estimates in the DEIS are estimates of the new population on Guam that is related to the proposed action. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS), Section 4.3.7 for information on Tourism. The analysis of the impacts on tourism generally reflect that the impacts of the proposed action would have on tourism would be mixed. Tourism may decline as some visitors may shy away from Guam due to construction activities and an increased military presence on the island but that would be made up for by increased visits from members of the military who are tourists while their ships are docked on Guam. The increase in military tourism is included in the population estimate.

I-505-001

**I-505-002**

Thank you for your comment.

**I-505-001**

1 designated by legislative authority as species  
 2 that are endangered or threaten. In Volume 7,  
 3 Page 1-9 you define invasive species as  
 4 introduce species that's spread widely and  
 5 cause harm. When you force a population  
 6 explosion of approximately 80,000 people on a  
 7 tiny island in over four years, you are the  
 8 invasive species and we become endanger of  
 9 being endangered.

**I-505-002**

10 So, messengers of the DEIS authors,  
 11 here is your message. Your study of endangered  
 12 species, it does not account for us. Your  
 13 anticipated job creation, it doesn't focus on  
 14 us. Your consideration of the historical  
 15 injustices done to Guam does not do us justice.  
 16 It was Martin Luther king who said this. Many  
 17 of the ugly pages of American history have been  
 18 obscured and forgotten. America owes a debt of  
 19 justice which it has only begun to pay. If it  
 20 loses the will to finish or slackens in its  
 21 determination, history will recall its crime  
 22 and the country that would be great will lack  
 23 the most indispensable element of greatness,  
 24 justice. That year was 1967.

1 Secretary Of The Navy Roger Natuhara (phonetic)  
 2 assured us that there will be a one Guam whole  
 3 government approach. And that this realignment  
 4 should benefit all and that by working  
 5 together, it will. In January 2010, we tell  
 6 you that as of right now, this is your buildup,  
 7 your DEIS and until it truly involves us, we  
 8 won't want it because we cannot afford it. We  
 9 also cannot respond, scientifically and  
 10 sufficiently to a document that took you years  
 11 to compile in just three months, three months  
 12 to review and three minutes to comment on a  
 13 document that guides the destruction of our way  
 14 of life, and you don't want us to react  
 15 emotionally?

I-505-004

16 Dear, experts, this is the time to  
 17 reconsider your professional objectivity and as  
 18 you revise this DEIS, because we hope you will,  
 19 drop your clipboards, remove your lab coats,  
 20 take off your glasses and think, truly think  
 21 about the people being the most impacted and  
 22 ask yourselves this, if we told you we have the  
 23 studies, we have the scientific studies and  
 24 very good reason to do what we are about to do;  
 25 would it then be okay for us to invade your

Thank you for your comment.

**I-505-004**

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

1 house, take your beautiful daughter, cut her  
2 hair, gouge her eyes, rip her clothes and then  
3 proceed to finish off, robbing her of her  
4 dignity by raping her? How would you react?

1                   COMMENTS BY MR. ROBIN MARQUARDT

2

3                   MR. MARQUARDT:     It is cold, right?

4 Part 3. My name is Robin Marquardt, 41-years-

5 old from Barrigada. I recently saw the movie

6 Avatar, I wish Senator Cruz told us what the

7 Okinawans said and I'd like to ask Senator

8 Pangelinan to put the base golf course idea in

9 writing. A reasonable starting point is using

10 real estate market trend analysis from 1951 to

11 the present and forward to future projections.

12 Land leases could be a focus with spot

13 purchases considered for landowners considering

14 selling.

15                   Again, current market value precedes

16 all ethical proposals and negotiations if, and

17 only if, the Guamanian landowner wills it. By

18 the way, if a Guam landowner wants

19 \$100,000,000.00 to lease his or her property,

20 surely installment payments may be negotiated.

21 You know, their great grandparents worked hard

22 to provide the best they can for all their

23 children.

24                   The reasoning; not to take any more

25 land is that the United States federal

**I-506-001**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

I-506-001

I-506-001

1 government taking lands from Guam landowners,  
 2 so it serves no immediate threat to the  
 3 security of our nation. In this largely  
 4 peaceful region and Guam's scarcity of land  
 5 relative to war in sighting countries, land  
 6 masses, begs the notion to ask that you  
 7 consider condemning lands in countries hostile  
 8 to US America, not to those Guamanians that  
 9 honor the USA, and that serve in its very own  
 10 military.

I-506-002

11 For example, I proposed an  
 12 international penal system I call "Territory  
 13 for terror". This idea sent from above, hereby  
 14 proposed, developed and passed by the United  
 15 Nations and enforced by three to five UN voted  
 16 countries decennially. "Territory for terror",  
 17 would penalize undeclared war terror attacks by  
 18 seizing a quit pro quo, portion of land by the  
 19 terrorists back in country -- by the terrorists  
 20 backing country to be held for a predetermined  
 21 time period, say, increments of 25 years.  
 22 These Territories for terror seized lands, I'll  
 23 call Marquardty, will be held by the UN, led by  
 24 the victimized country and used for global  
 25 purposes with the first 10 to 25% of Marquardty

**I-506-002**

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

I-506-002

1 Production going to the victimized country. No  
 2 analysis is complete without a risk assessment,  
 3 thus there is a weakness and a threat that came  
 4 up while preparing this testimony that I must  
 5 present out of concern.

6 Guam's east coast has no Naval presence  
 7 to speak of location, location, location. If  
 8 anti-US American governments wanted to disable  
 9 the US American region first line of defense,  
 10 the east coast of Guam will be the weakest  
 11 point for quick access due to nominal US Naval  
 12 presence.

13 By far, the US federal government is  
 14 our big watch keeper, protector and sharing  
 15 respect with them as we would treat a father, a  
 16 priest or an elder. It will serve us well to  
 17 treat them kindly with mutual intellect,  
 18 because even a father makes mistakes and they  
 19 need encouragement to see through to complete  
 20 moral treatment and best practices on levels of  
 21 security and economy alike.

I-506-003

22 Last, finally, we've learned a lot  
 23 since World War II, and with the US American  
 24 presence, the Japanese respect Guam landowner's  
 25 rights by asking to invest in Guam and in some

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

I-506-003

1 cases buying and leasing property on Guam, USA  
2 with these presets, surely the United States  
3 American and federal government can be guard  
4 Guam landowner's rights in this historically  
5 and technologically advanced time of peace in  
6 this region. Si Yu'us Ma'ase

1                   **COMMENTS BY MR. JOHN BENAVENTE**

2  
3                   MR. BENAVENTE:    Buenas.    Good evening.  
4 My name is John C. Benavente, I'm a United  
5 States army retiree.    For my military friends  
6 in the area, including Captain Witingbach, are  
7 you still there Captain Witingbach or you left?  
8 My background is basically the following; I  
9 spent seven years in the US Army Training  
10 Center at Fort Jackson, South Carolina and Fort  
11 Ort California as an infantry tactics committee  
12 and as a Senior Drill Sergeant.    I understand  
13 the needs of the light infantry battalion or  
14 mechanize infantry battalion for Cady Ranges  
15 and transitional firing lanes.

16                   Objection; I object to any more land  
17 taken.    We have given so much of our limited  
18 land area starting with the illegal land-taking  
19 of 1945.    The Manamorro have given so much in  
20 service to the country in land and lot, over  
21 6,000 of us served in Vietnam.    Many served in  
22 infantry companies and were wounded, and 70  
23 were killed in combat.    Today as we speak,  
24 hundreds are in combat carriers in Iraq,  
25 Afghanistan and many more are in overseas

**I-507-001**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-507-001

I-507-001

1 command, who are in corners unit standing by  
2 ready for deployment.

3 DOD, currently holds about 1/3 of the  
4 land mass of Guam. There is enough land for  
5 small range, small arms firing range in both  
6 Naval Station Orote at Orote Peninsula and at  
7 Andersen Airbase at Tاراque. There has been a  
8 rifle range in both locations since 1945,  
9 capable of handling the needs of a light  
10 infantry battalion. Historical land culture  
11 sites are already destroyed during the site  
12 development in 1945 to 1950. So, there's no  
13 historical or culture sites to protect.

14 Units undergoing marksmanship training  
15 can be house in 10 cities in the vicinity of  
16 the rifle range. This will eliminate the needs  
17 for units to return to base at night,  
18 furthermore, it would allow integrating night  
19 firing into the training cycle. Unit staying  
20 in their field during the range firing is  
21 commonly done to economize, save travel of time  
22 and resources. I urge the decision makers not  
23 to take anymore land, at best, there would be a  
24 very poor public relation job and that will not  
25 be good for the marines and all the community.

1                   **COMMENTS BY MR. KENNETH LEON GUERRERO**

2

3                   MR. LEON GUERRERO: Thank you first of

4 all Colonel for offering to minimize the

5 negative impacts of this buildup. My review of

6 the document so far, specifically in Volume 7,

7 specifically Public Safety. I take issue with

8 their lack of -- there's been a lot of talk

9 about this buildup construction on people on

10 Guam, how it's going to affect Guam but one of

11 the things people forget is these people are

12 almost being kicked out of Okinawa. There was

13 a lot of a public crimes and real known things

14 and we're not hearing a lot about that, then

15 this plan, every page talks about hazard

16 analysis control mitigation plan for just about

17 everything but there's not one for the

18 predictable crime increases coming to this

19 island. I'm a father, I'm a grandfather, and

20 I'm very interested in this particular subject.

21 The Marines have committed for years and years

22 in Okinawa, Marines have committed rapes,

23 burglaries, assaults, DUI's, domestic abuse,

24 family violence. Where are those statistics?

25 People on Guam might want to know because even

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-508-001**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-508-001**

I-508-001

1 the average is what we're importing. But you  
2 know, example, 10 rapes a year, you know, whose  
3 daughter will one of those 10 be? You know, I  
4 think they need to provide -- and this is not a  
5 stretch to say this doesn't affect our  
6 environment. Public safety is very much our  
7 environment.

8 So, you know, I have daughters, sons, I  
9 mean what is the plan to mitigate the impacts  
10 of crimes committed off-base by US Service  
11 personnel? And there are thousands coming,  
12 there's thousand of H2 workers coming, where is  
13 that plan? And if you look at their plans,  
14 they are very specific on what they're going to  
15 do. I mean I would like to see things like  
16 committing these people to not coming off base,  
17 barring them onto base facilities, coming off  
18 base is a privilege that they should not take  
19 for granted, and it needs to be said. So thank  
20 you for listening and my official question for  
21 the stenographer is where is the crime  
22 mitigation control plan?

COMMENTS BY MR. JUAN PEREZ DIAZ

1  
2  
3 MR. DIAZ: [speaks in the Chamorro  
4 language; the night is still young. I am Juan  
5 Perez Diaz of Santa Rita. This land -- I have  
6 been here, I saw the destruction of Sumay,  
7 because I used to live in Sumay. They killed  
8 all the sea life, they dredged all the harbor.  
9 And now look at this aircraft carrier, it will  
10 do the same. Today I don't agree with the  
11 buildup and I want to tell you it will be the  
12 same destruction when the buildup comes. But  
13 for me I have a lot to wonder about because I  
14 don't know what they are going to do. They say  
15 it will bring a lot of good when it comes, but  
16 for me I have some reservations about opening  
17 up our place because, I don't know, this might  
18 destroy this territory -- we need to learn more  
19 about it. I see this against democracy and  
20 it's like the holocaust of the Chamorro. Don't  
21 go for this buildup. That's my input for this  
22 DEIS.] Si Yu'us Ma'ase.

**I-509-001**

Thank you for your comment. The proposed location of the new Navy wharf was chosen as the least environmentally damaging alternative in efforts to avoid the least amount of live coral in the area. The proposed dredge area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging continues. The proposed dredged area consists mainly of a sand, rubble, and algae zone. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. Direct impacts of dredging to the shoal areas within Apra Harbor (Western Shoals, Middle Shoals, Jade Shoals, and Big Blue Reef) will be avoided. The indirect impacts (from sedimentation) to these areas from in-water activities will also be avoided based on computer tide/current modeling performed within the project area (see Figure 11.2-3).

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

**I-509-002**

Thank you for your comment.

COMMENTS BY MS. REBECCA NORTH

1  
2  
3 MS. NORTH: Thank you. Rebecca North,  
4 I'm just a resident of Santa Rita. I have a  
5 lot of great concerns about the buildup but  
6 just a few that I'd like to address tonight.  
7 One is the protection of our aquifer. You  
8 know, they have said, we increase the number of  
9 people that we have, obviously, we're going to  
10 pull more water out of our aquifer. But what  
11 else I'm worried about is beyond that is our  
12 water going back into the aquifer. We're  
13 building up, the more that we put down, the  
14 more construction that we have on our island,  
15 the more concrete we have out there in our  
16 island, the less water that's going to go back  
17 into our aquifer more than it's going to run  
18 off into the ocean without replenishing our  
19 aquifer.  
20 Now, I know that they've said that  
21 they're addressing what they're doing on base  
22 trying to mitigate this problem. And that's  
23 wonderful. That's absolutely fabulous that  
24 they're going to try to do construction methods  
25 that will allow the water to go back into the

I-510-001

DEPO RESOURCES  
George B. Castro  
Court Reporter

**I-510-001**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks.

The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

While the above scenario shows that adequate water should exist from the aquifer with current recharge rates, you raise a very good point on civilian development. While DoD proposes to use low impact

I-510-001

1 aquifer. But where is the plan for the buildup  
 2 that's going to happen off base? You know,  
 3 where are we addressing this issue off base and  
 4 we already see that happening right now. We  
 5 know that our island is becoming hotter over  
 6 the years because we have more concrete, we  
 7 have less grass, we have less places for the  
 8 water to go back in the aquifer. And that is  
 9 one of our prize, prize resources on this  
 10 island and we need to protect it.

I-510-002

11 So, next question I have, is also in  
 12 the dredging of the harbor and I know that they  
 13 say it's just a small amount of reef and I hate  
 14 the thought of any reef being dredged, period.  
 15 But I also worry about even if it's just a  
 16 small amount of reef area, I still worry about  
 17 sediment. And we've all, people who've been in  
 18 the ocean and have done snorkeling, you could  
 19 see where we've had sediment issues that have  
 20 destroyed reef areas because the sediments come  
 21 up and spread and killed off the reef,  
 22 suffocated the reef. And I know they're  
 23 talking that they have a way that they're  
 24 putting a surrounding net around it. I'm very  
 25 anxious to see what report is for what the work

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

development for its new facilities to minimize aquifer recharge and quality impacts, DoD cannot control the civilian development side and its potential impact on aquifer quality and recharge. DoD, GWA, and GEPA have agreed to a joint management approach of the aquifer and this issue of civilian development and its impact on groundwater recharge should be included in their charter.

DoD is also preparing a stormwater pollution prevention plan (SWPPP) and will apply for permits that regulate stormwater discharges during construction. Once construction is complete, a SWPPP will be developed to control stormwater runoff and infiltration from base operations. This is being done on a regional DoD Guam-wide scale, and has the involvement of Guam EPA. Guam EPA has expressed an interest in adapting many of the DoD SWPPP concepts and controls that are used today on Guam by DoD into EPA's own stormwater regulatory program.

You have raised a very good point and we plan to discuss this issue with Gov Guam, GWA, and GEPA. A resolution satisfactory to the good of everyone on Guam is in DoD's best interests and we will pursue such resolution.

### **I-510-002**

Thank you for your comment. As identified in the EIS, the proposed dredged area within the active commercial and DoD harbor was previously dredge over 60-years ago and maintenance dredging continues. Significant unavoidable impacts will be seen to coral reef, other immobile invertebrates, and some site-attached reef fish from the proposed action. However, a majority of the fish species and mobile invertebrates will vacate the area and return when in-water construction is completed, experiencing only short-term and localized effects. To lessen these effects, the Navy will implement mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains to catch a high

I-510-002

1 they're doing in Kilo wharf, to see how well  
2 that has worked there, to be assured that we're  
3 going to protect the reef that is inside our  
4 harbor.

I-510-003

5 The next area is more from a Boonie  
6 Stumper's standpoint, we talk about Pagat caves  
7 and the area and doing the live shooting range  
8 -- sorry, up there. And we want to be able to  
9 have access to that area, it's a beautiful  
10 area, it's a wonderful place to go down,  
11 there's limestone sites there that we want to  
12 protect. And we want to make sure that we have  
13 access and I know that we said okay, we have  
14 access to places on Naval Station for hikes and  
15 what have you. But it's very hard to actually  
16 find out when you have access to those sites  
17 and I want that to be a better managed system  
18 if we're going to be using that area.

19  
20  
21  
22  
23  
24  
25

**DEPO RESOURCES**  
George B. Castro

percentage of the resuspended sediment, biological monitors, and halting of dredging activities during potential coral spawning months. Additionally, the Navy, as part of the "build-up" on Guam has proposed to upgrade the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist Guam Water Authority in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7. Compensatory mitigation for unavoidable coral community impacts includes the following options: Option 1: Artificial Reefs within Apra Harbor or Other Locations; Option 2: Watershed Restoration and Management (Aforestation, Apra Harbor and/or Philippine Sea Riparian Enhancement, Stream bank stabilization component [all project goals to reduce sediment discharge into nearshore waters]) Option 3: Coastal Water Resource Management (Shallow Water Reef Enhancement); and Option 4: In-Lieu Fee or Mitigation Banking Program. The final conceptual determination would not be made until the Record of Decision on this EIS. More detailed identification of potential mitigation would be done during the USACE permit process. Both artificial reefs and watershed management projects would be considered as potential compensatory mitigation, and it is possible that a combination of those potential mitigation efforts that are

listed below would be appropriate. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

**I-510-003**

Thank you for your comment. DoD understands and recognizes the significance of cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-511-001

1 parents died and they never see their land,  
 2 they were never given back what they belong.  
 3 And we lost all those land because when the  
 4 military move out they never give my father the  
 5 land and my mother, the land back. And that's  
 6 what I'm asking here, is why only Guam and why  
 7 only the Chamorro people.

I-511-002

8 In 1990, I have a 17-year-old daughter  
 9 who went to a hotel to ask for a job, she was  
 10 being denied. And in 1990, the hotel industry  
 11 imported 300, I mean 3,000 of Micronesia and a  
 12 lot of the Chamorro people, when I talked to  
 13 them about it they don't even know about it.  
 14 They were hired and they were going to teach in  
 15 the hotel for three months to handle the table  
 16 and all those things. Why did not they hire  
 17 here in Guam? You think we don't know how to  
 18 learn, you know?

19 You know, I'm not a good speaker but I  
 20 have a lot of things up here and I don't know  
 21 how to say it in English because if I know, I  
 22 think you people will agree with me. And the  
 23 only reason why I'm asking again, why only Guam  
 24 and why only Chamorro? We cannot go to  
 25 Micronesia. The Northern Marianas, we cannot

**I-511-002**

Thank you for your comment. As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will decrease. The decrease in the number of jobs is expected to be greatest in the construction industry; however, the number of construction jobs after the proposed action is expected to remain higher than it is currently. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. The DEIS notes in Appendix F, Socioeconomic Impact Assessment Study, that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the Wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well

I-511-002

1 do anything there, but they can come in here  
 2 and do like what they're doing now. You know,  
 3 that's the problem here in Guam, and remember  
 4 that before the Japanese came to Guam, the only  
 5 island that was hit is the island of Guam; why?  
 6 Because this is the only island that the  
 7 American occupied, now, we're going to rebuild  
 8 the Guam for defense purposes. If war broke  
 9 out, the only island again they're going to hit  
 10 is Guam, not the Micronesia island or the  
 11 Northern Marianas. Thank you.

situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria. Items identified in this comment (travel to Micronesia) are not part of the proposed action and are therefore not addressed in the EIS.

COMMENTS BY JOHN T. BLAS

1  
2  
3 MR. BLAS: Thank you, Mr. Guzman and I  
4 want to thank all the staff of the personnel  
5 that came in to listen to us. We have public  
6 law -- I mean bills on 258 that most of the  
7 Chamorro agreed that they don't want  
8 condemnation from the military if they're going  
9 to condemn the property. And I remember one  
10 old man stood up and say, they would like to  
11 see the fair market value of the people of  
12 Guam, not the fair market that they're going to  
13 bring up the pressure from the states and to  
14 determine the fair market value. Might as well  
15 we don't make comment.  
16 The second one, is I would like the  
17 staff to know that we have two national  
18 languages on Guam, English and Chamorro. And  
19 like to have the Chamorro when these people are  
20 coming in I don't know if they're alien or --  
21 to learn to speak Chamorro not us to speak  
22 their own language; okay? I have an experience  
23 in the Navy Exchange, they were telling the  
24 staff to speak English and not to speak  
25 Chamorro. I don't see why we have the Chamorro

**I-512-001**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-512-002**

Thank you for your comment. Having DoD personnel learn Chamorro language would not be practical. However, through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-512-002

1 culture to enforce that law and that's all what  
2 I'm asking is, please don't bring an alien here  
3 and for the Chamorro to speak their language.  
4 We want them to speak the Chamorro language  
5 because English and Chamorro is our national  
6 language here. Thank you.

COMMENTS BY MR. KEN RECKDAHL

MR. RECKDAHL: Good evening, my name is Ken Reckdahl from the village of Agana Heights. The reason I choose to vocalize my limited comments is that, I just want to show that there's -- that I have a blind faith in the process and I hope that other people will see that there's comments to, many, many comments to be made.

I reviewed limited portions of DEIS, Volume 6 and Volume 7, and I focused my review on water and wastewater. My first comment is on the, "Preferred Alternative 1A" which is 22 New Wells in the Agafa Gumas and Yigo basins. My comment is, you know, that's a, from what I understand, that's very good water on Guam, you know, it's a very useable source, I think that's why it's the preferred alternative. I would suggest, however that the, that the military consider previously contaminated sites, IR sites, Installation Restoration sites, located on and off of the base. These sites are known to contain, I don't know the exact location but I know they're out there,

DEPO RESOURCES

I-513-001

Thank you for your comment. The option of extracting water from wells that are not currently in production due to contamination is considered in section 2.2.3.4 of the DEIS. This option is included in the Basic Alternatives 1 and 2 to lower the capacity required from newly installed wells. However, the option to rehabilitate inactive DoD wells does not provide sufficient water supply to meet the full demand required by the Marine Corps relocation. Newly installed wells are necessary to meet the full demand of the relocation.

At the time the July 2008 Guam Water Utility Study was prepared, there were 12 DoD wells that were inactive due to problems including microbial contamination, volatile organic carbon (VOC) contamination such as trichloroethene (TCE), high salinity and structural/mechanical issues. The DoD has since begun or completed rehabilitation or replacement of several of the Navy-owned wells. The inactive wells with VOC contamination, Marbo #2 and Tumon Maui wells, are located in the Yigo Sub-basins. Compared to the 1991 sustainable yield estimate, the available yield in the Yigo sub-basin is not sufficient to allow reactivation of these wells with an alternate means of treating the contamination. Therefore, the Guam Water Utility Study, considers replacement of the capacity from the inactive wells in areas of the NGLA where there is sufficient available yield. Basic Alternative 2 includes installation of 12 replacement wells on Navy Barrigada. Please also note that the 22 wells are planned for the Agafa-Gumas and Andersen sub-basins.

Proposed production wells are located away from known sources of contamination. Use of contaminated groundwater for potable water supply to the Marine Corps base is unlikely to receive acceptance from USEPA which provides a review of the environmental impact and adequacy of the proposed action. As shown on Volume 6, Figure 2.2-2, the area with monitoring wells showing MCL exceedances of TCE are in the northeast portion of the Andersen Sub-basin. This area is within a

I-513-001

1 they contain TCE and PCEs and other  
 2 contaminants of that nature. I suggest that  
 3 you locate your primary wells over these sites  
 4 and pump and treat that water. If you intend  
 5 to use the ground water, I suggest that you be  
 6 a good steward of the environment and pump and  
 7 treat the contaminated water in or around your  
 8 grounds, that's comment Number 1.

I-513-002

9 My second comment is on the wastewater,  
 10 I understand that the Northern District  
 11 Wastewater plant is going to be upgraded, the  
 12 primary and support to secondary, I think  
 13 that's very positive alternative. However, I  
 14 understand that the military is one of the  
 15 largest industrial uses on Guam and much of the  
 16 wastewater generated within the military is  
 17 industrial wastewater. Many jurisdictions  
 18 require pre-treatment of industrial wastewater  
 19 which, I understand is being done but it's  
 20 being done sort of as a point source approach  
 21 which many, there could be many failures in  
 22 that approach. My suggestion is to have a  
 23 consolidated pre-treatment for all of your  
 24 industrial wastewater before entering the  
 25 Northern District Wastewater Treatment Plant.

basal zone of the sub-basin. In addition to the presence of contaminated groundwater, the area was not considered because production wells typically have a lower yield than wells located in parabasal zones which would require a significantly larger number of wells to install and operate.

**I-513-002**

Thank you for your comment and concern regarding industrial wastewater flow from military operations. As per GWA's rules and regulations (Rule 2120), all industrial users discharging to GWA sewer shall comply with pretreatment program and require pretreatment to an acceptable condition before discharging to its sewers. GWA shall implement a program such that pretreatment permit application monitors and controls all the wastewater discharge from military operations to GWA sewer.

I-513-002

1 That will be beneficial to the secondary  
2 treatment process because the chemicals and the  
3 biological activity and secondary treatment as  
4 I understand it, doesn't like the industrial  
5 wastewater sludge.

6           So, I strongly suggest that you  
7 consider pre-treatment of your wastewater and  
8 you consider relocating some of the 22 wells,  
9 if not all of them, to known contamination  
10 sites that can be pumped and treated. That's  
11 all.

COMMENTS BY MR. FELIX TORRES, JR.

I-514-001

1 MR. TORRES: Good evening. My name is  
2 Felix Torres and I'm 17 years old, and I am a  
3 local resident from Guam, I am Chamorro. First  
4 of all, all of these comments on DEIS, I've  
5 never read it but I have heard few things on  
6 it. And from what I hear is there are some  
7 good, there are some bad, but why our island?  
8 We're so small compared to Okinawa, Japan. We  
9 don't really have the infrastructure to hold  
10 that many people. And seriously with that  
11 much, I don't know how Guam is going to be.  
12 It's right, we're a minority on our island  
13 already, it's hard to say that I'm Chamorro and  
14 I don't really know my own language. It really  
15 sucks, okay? And I don't know if anybody in  
16 here has ever like been so what -- I don't even  
17 know the word for it, but been so connected  
18 with their culture that they'd do anything for  
19 it, but I'm willing to do anything for my  
20 culture. And this move or this buildup will  
21 only hurt our culture more. And I'm very, very  
22 cultural. And the reason why my mother didn't  
23 teach me how to speak Chamorro is because she

I-514-001

Thank you for your comment, which focused on how Guam was chosen for the military relocation, rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work with the people and Government of Guam to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

I-514-002

1 wanted me to succeed, make money, get an  
 2 education and that is the greatest thing in the  
 3 world; and from the Piti mayor's comment, how  
 4 are we free? Seriously, how are we free when  
 5 we can't even go into any, like certain parts  
 6 of our land to hunt? Hunting is part of our  
 7 culture, okay? Hunting, fishing, there's many  
 8 other things, and we cannot do it because the  
 9 US Government owns that part of the land. This  
 10 is our island, we are Chamorros, and together  
 11 we must fight. And the thing is I can't be a  
 12 Chamorro if I can't practice my own culture.  
 13 Thank you.

**I-514-002**

Thank you for your comment. DoD understands and recognizes the significance of access to cultural and recreational sites located on DoD property in Guam. Restricting access to certain DoD areas at certain times is required to maintain public safety. It is the intent of DoD to maintain public access to DoD lands that contain cultural sites consistent with safety and operational requirements. Access will be granted at approved times such as when the lands are not being used for military training. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

1                   **COMMENTS BY MR. REINHARD ALCAMPOR**

2

3                   MR. ALCAMPOR:   Good evening.   My name

4 is Reinhard Alcampor, I am 15 years old, a

5 sophomore attending Southern High School and a

6 resident of the village of Agat. I represent

7 not only myself, for I share the opinions of

8 many of my peers, the youth of this island. I

9 am not in support of the military buildup. If

10 it were to materialize, it would have an

11 overall negative effect on all aspects of our

12 daily lives. Whether it deals with our

13 economy, the current state of our environment

14 or the preservation of our island's rich

15 history and deep cultural diversity, things

16 will change, and it will not only be -- it will

17 not be for the betterment of our people.

18                   We are promised many benefits, the most

19 prominent of which being the increase of jobs.

20 The idea alone had people jumping in support

21 for the military buildup. What most people do

22 not know is that the bulk of these jobs will be

23 in construction, a field which Guam does not

24 specialize in. The vast majority of these jobs

25 will be taken by H2 workers who will flying in

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-515-001**

Thank you for your comment. As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will stabilize at a level above the current situation. The fluctuation in the number of jobs is expected to be greatest in the construction industry. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the Socioeconomic Impact Assessment Study (Appendix F of the Draft EIS), notes that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

**I-515-001**

I-515-001

1 from all over Eastern Asia. They are highly  
2 qualified individuals, but under US law, since  
3 they are not US citizens, the government is not  
4 required to pay them minimum wage. The  
5 military will exploit this as mixed choosing  
6 who to employ, a much easier task for them.

I-515-002

7 Another benefit we are promised is that  
8 the massive influx of people will result in an  
9 increased of consumerism, thus improving the  
10 state of our unstable economy. This won't  
11 necessarily be the case as military bases on  
12 island already have grocery stores and shopping  
13 centers, accessible to those who are in the  
14 military. These grocery stores and shopping  
15 centers provide a much greater variety of goods  
16 from electronics to food, but at a much cheaper  
17 cost compared to those of locally-run  
18 businesses. At a logical point of view this  
19 alone keep most of the money circulating out of  
20 our economy and within the military-run  
21 communities.

I-515-003

22 Another issue regarding the military  
23 buildup which I would personally like to give  
24 emphasis on is the Marines being relocated from  
25 Okinawa, are the same Marines which have a

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-515-002**

Thank you for your comment. The proposed Marine base, like others in the U.S. provide for on-base stores offering discounted prices; similarly, the medical clinics would be located on-base near the population it services. These are businesses that are part of the benefits provided to the military and their dependents. While these are part of the base, other local business opportunities would arise from military expenditures and individual spending. The Final EIS Volume 2, Chapter 16 provides a jobs analysis related to the issue of business opportunities. It also provides qualitative information on local business contract opportunities.

**I-515-003**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in

I-515-003

1 colorful history of violence against the  
2 citizens and most especially the women of  
3 Okinawa. The rape of a 12-year-old girl in  
4 1995, and the rape of a 14-year-old girl in  
5 2008 sparked massive public outcry on both  
6 occasions respectively. These are only two  
7 examples put in light to the public by the  
8 media, but a woman's rights group in Okinawa  
9 compiled a list of hundreds of cases in which  
10 women were beat and/or sexually abused by  
11 military personnel. The descriptive accounts  
12 of many of these cases are very brutal and too  
13 violent in nature to be discussed openly to the  
14 public. The perpetrators of these crimes are  
15 not put under the jurisdiction of the local  
16 authorities but under the custody of the US  
17 military. For the vast majority of these  
18 cases, charges were dropped and the  
19 perpetrators of the crimes are left unpunished  
20 for their actions. I fear for my family, my  
21 friends and every innocent individual who has  
22 to be forced to live on the same land with  
23 neighbors of violent histories and the  
24 potential to repeat their actions on the past,  
25 on this island. My biggest concern on this

Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-515-004

1 issue, however, is that we the people never had  
 2 the opportunity to give our decision on this  
 3 matter. We are US citizens but with a total  
 4 disregard for our liberal rights, we were  
 5 informed but we do not have a say in this  
 6 matter at all. The greatest extent of our  
 7 freedom we were given in this matter was  
 8 voicing our opinions, but even those seem to be  
 9 ignored.

10 All we ask, is to be given the  
 11 opportunity to decide for ourselves on issues  
 12 that will affect us, the people of the island  
 13 of Guam. We ask that we are able to voice our  
 14 concerns and have them taken seriously into  
 15 consideration. Thank you for listening.

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

COMMENTS BY ANNE PEREZ HATTORI

1  
2  
3 MS. HATTORI: Thank you. I think like  
4 most people here who've had the chance to read  
5 the EIS, we're suffocating in data. It's  
6 overwhelming, it's depressing. I have talked  
7 to so many of my friends who've had sleepless  
8 nights just worrying about our children, our  
9 grandchildren, what life will be like, and a  
10 number of my friends and classmates have talked  
11 about starting to save money to leave island.  
12 And it's very sad for me as a Chamorro, knowing  
13 that our people are looking so pessimistically  
14 at our future.

I-516-001

15 With this very short time, I want to  
16 address the EIS as directly as I can. One  
17 obviously very important concern for a number  
18 of people here has been the issue of water.  
19 And one of the questions I want to raise which  
20 has not been adequately addressed in the EIS,  
21 nor by people I've talk to today is the  
22 question of droughts due to lack of green  
23 space, construction on the island, rising  
24 temperatures, all of which tends to contribute  
25 to decrease rainfall which means that the water

**I-516-001**

Thank you for your comment. The Navy plans to support a USGS study of the NGLA which will provide updated sustainable yield estimates for the aquifer. The study will incorporate the latest available climate data (rain fall, temperature, etc.) and estimates of land coverage change. Although the results of the study will not be available for 3 to 5 years from now, the final results will be used to effectively manage the groundwater resources supplying the civilian and military populations. Note that the previous estimates of sustainable yield for the NGLA were conservatively low. According to Dr. Jensen of WERI, a revised estimate of the sustainable yield is likely to be higher by approximately 20 percent. Therefore, the current water system capacity planned for the Marine Corps base is unlikely to exceed the production capacity of the aquifer.

I-516-001

1 liens is not going to be replenished at the  
 2 rate in which we have currently experience,  
 3 which means that the EIS' optimistic forecast  
 4 basically saying that there are 22 wells, new  
 5 wells pumping into our northern aquifer is  
 6 going to be A-okay, but just in case GovGuam  
 7 you should look into desalination. But that is  
 8 a naive Santa Claus image that the EIS is  
 9 setting forth.

10 So, I want them to address the issue of  
 11 decreased rainfall and increasing droughts on  
 12 Guam. Other Pacific islands that have gone  
 13 through phosphate mining and other extreme  
 14 overdevelopment and lack of loss of green  
 15 space, they're already experiencing this and  
 16 once we start having to import our water, well,  
 17 that's fine for the military, but what about  
 18 the civilians?

I-516-002

19 The second thing I want to address in  
 20 the EIS is what I actually consider to be a  
 21 very naive estimate of population growth on the  
 22 island. The EIS numbers are staggering,  
 23 80,000, but I think that's naive because it  
 24 doesn't take into account people from islands  
 25 close to us who will be coming now to Guam for

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-516-002**

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) for further information on population impacts. The Socioeconomic Impact Assessment Study (SIAS) does account for job seekers (and their dependents) who would come to Guam as a result of the proposed action. Please see Section 4.3.1.2 for discussion and analysis of sources of labor supply.

I-516-002

1 jobs. We know this is going to happen because  
 2 the island economies around us are suffering  
 3 and they will look to Guam for jobs. The  
 4 countries around Asia with millions and  
 5 hundreds of millions of people are going to be  
 6 looking at Guam more so than Hawaii, California  
 7 as a place of opportunity.

8 So, I think that the population  
 9 estimates in the EIS are actually naive. And  
 10 what this is going to mean for GovGuam is that  
 11 our problems with water, power, sewage, solid  
 12 waste, hospitals, mental health, public health,  
 13 schools, et cetera, et cetera. Well, all that  
 14 extra money that's supposed to be flowing in,  
 15 it's going to be basically sucked up, just so  
 16 that everyday we can actually, you know, take a  
 17 shower or flush our toilet.

I-516-003

18 And the last thing I want to mention is  
 19 because it has been mentioned today is that in  
 20 the EIS, at least 25 archeological sites,  
 21 ancient Chamorro sites will be directly  
 22 impacted, that means destroyed. And possibly  
 23 60 others implicated indirectly affected and I  
 24 would advocate that no ancient Chamorro sites  
 25 be dist

**I-516-003**

Thank you for your comment. Early identification, consultation, and predictive modeling resulted in many fewer sites being directly impacted by designing installations away from or around areas that contained high densities of historic properties. Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO and other stakeholders to continue in our efforts to avoid, minimize and/or mitigate adverse effects to cultural resources.

COMMENTS BY MS. MONEKA DE ORO

1  
2  
3 MS. DE ORO: Buenas, hafa adai. My name  
4 is Moneka De Oro. I am from Guam from various  
5 -- I've lived in various villages and I call  
6 this whole entire island my home. This is my  
7 son Ma'ase, he is one year old and I'm here to  
8 speak on his behalf. Sorry, I'm really  
9 emotional. Throughout this whole night, I've  
10 been really emotional talking to so many people  
11 who are here as professional experts, and  
12 talking to people, my own people who are  
13 experts of our island and experts who I feel  
14 need to be making these sorts of decisions and  
15 having those who are at presentations.

16 My concern's specifically about the EIS  
17 and this overwhelming process is most  
18 specifically about what the last point that Dr.  
19 Hattori made as a, as a student of Archeology  
20 and Anthropology here in the island, I have a  
21 great love and I have come to know a lot more  
22 about our ancient Chamorro sites and our -- and  
23 of throughout, and come to appreciate our rich  
24 history and I feel basically too that no site  
25 should be, no site should to be hampered. And

Thus, the vast majority of impacts to resources were avoided. DoD will continue to work very closely with the Guam SHPO and other stakeholders to avoid, minimize, and/or mitigate any adverse effects to cultural resources and to provide information necessary to protect historically important archaeological sites.

I-517-002

1 one thing that the EIS does not address is that  
 2 there's over 300 sites that are eligible on DOD  
 3 lands and the proposed lands within the EIS for  
 4 inclusion of the national historic registry of  
 5 resort places and also the Guam registry. But  
 6 the EIS does not address the lack of person, of  
 7 trained personnel at HPO and other agencies to  
 8 -- at the same time, fill out these documents  
 9 that protect them as well as approve permits  
 10 and keep up with the daily task that the  
 11 buildup and other constructions outside the  
 12 base may have for approving permits for  
 13 construction and what not to have the throw --  
 14 I'm sorry, I'm jumbling because I have so many  
 15 thoughts that are within me, because really  
 16 this is so overwhelming. I can make comment on  
 17 every single one of those things and I really,  
 18 really, really want to encourage every single  
 19 person to come up here and take advantage of  
 20 this opportunity because this is the only  
 21 opportunity that we have to voice our concerns  
 22 and it's really, really sad that this is the  
 23 only place for us. And it's very, it's an  
 24 insensitive place, it's an intimidating place  
 25 for us to be speaking to each other like this

**I-517-002**

Thank you for your comment. The DoD is currently working toward a Programmatic Agreement, which when completed, will help the Guam SHPO with staffing issues by streamlining the Section 106 process so that extraneous review in areas where there are no historic properties and for projects that do not affect historic properties have already been consulted upon. Therefore, the Guam SHPO can concentrate their efforts on specific projects which may have an effect on historic properties.

1 about these plans about our island and I  
2 really, really want to encourage you if you're  
3 afraid, don't be afraid. Come up here and say  
4 what you need to say because this is our island  
5 and we really, really need to come out in full  
6 force to protect it. If we don't -- what about  
7 him, what is he going to get? Please.

COMMENTS BY MR. MARTIN OLIVA

1  
2  
3 MR. OLIVA: Can I move this back? You  
4 know, so people in the front can -- hello, good  
5 evening everyone. I'm pretty sure we all know  
6 why we are here for the same reason. My name  
7 is Martin Oliva. I am 20 years old and I  
8 reside in a Village of Piti. Anyway, what the  
9 speech I'm about to say, it does concern most  
10 of everyone in here and it does actually  
11 concern everyone in the world for we do, all  
12 have a say in everything we do.

13 There are no heroes living among us  
14 anymore, only real humans. Only ones who claim  
15 to be. Feeble-minded politicians lied to say  
16 that they are concerned only to save to get the  
17 position of possession of people under their  
18 control to do their bidding. Only one, only  
19 one could accomplish so much of the power,  
20 funding and resources. It will be terrible if  
21 it was in the wrong hands. Civilian impacts,  
22 Patriot missiles seizing lands is not a way of  
23 asking and, yeah. Us inhabitants are the  
24 endangered species in a matter of fact and then  
25 they know don't mean no negotiations ever took

1 place, building silos and tearing down  
 2 historical monuments of a dying already culture  
 3 is an act and formal act of racism. Like we're  
 4 some rag dolls in your fun house, when finished  
 5 we'll be doused in gasoline like napalm  
 6 incinerating thousands of Vietnamese destroying  
 7 ecosystems, the reef of justice will crumble  
 8 and the tides and waves of tyranny will and  
 9 inevitably drown us or disappointedly -- why do  
 10 we have no choice? Why do we have no say? For  
 11 we live in an era that democracy and power to  
 12 the people does not exist let alone, life isn't  
 13 the same. Calamities and animosities happen  
 14 everywhere due to the political corruption. We  
 15 have no choice, it is inevitable. We stand  
 16 upon a flawed and faulted nation, for we are  
 17 all humans, we make mistakes but we do  
 18 something and we have a very talented gift that  
 19 most animals do not have. We have the gift  
 20 that we can prevent and change most things.  
 21 And we can shape our present; we could shape  
 22 our future into any shape we wanted. I am not  
 23 a revolutionist but just a common man who tries  
 24 to make ends meet.

I-518-003

COMMENTS BY MR. PETER GUY CALORI

1  
2  
3 MR. CALORI: Buenos tades. My name is  
4 Peter Guy Calori. There are so many issues  
5 here. I want to add a couple of issues that  
6 have not been addressed. I represent people  
7 who love the ocean, environmentalists, and  
8 watermen all over the world.

I-519-001

9 Some of the issues regarding the reef  
10 and the dredging of the reef in the inner Apra  
11 Harbor, that's a surf spot. It really is. And  
12 once it's changed, that wave will never ever  
13 break the same again. I surfed that in the  
14 area, I've seen it break before, it's perfect,  
15 beautiful. If it's dredged, my grandchildren,  
16 your grandchildren, great grandchildren will  
17 never get a chance to appreciate that the way  
18 it is.

I-519-002

19 The live firing ranges on the east side  
20 of the island, that's going to require that we  
21 can't pass through there to go fishing, spear-  
22 fishing, rod and reel trolling. We can't even  
23 use that to go paddle canoes around that on a  
24 northwest passage which was done earlier. That  
25 was an amazing event done by a team of female

DEPO RESOURCES  
George B. Castro  
Court Reporter  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-519-001**

Thank you for your comment. The proposed dredging within Outer Apra Harbor that will be required to accommodate the aircraft carrier will be at depths of -49.5 mean lower low water plus 2 feet overdredge, and not in proximity to surfing spots such as the Western Shoals and the Big Blue Reef, therefore, there will be no impacts to the surfing spots.

**I-519-002**

Thank you for your comment. It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

I-519-002

1 canoe paddlers who entered that water and  
 2 courageously went around the roughest, most  
 3 challenging part of the ocean. And they were  
 4 successful. But if there's a live firing  
 5 range, that's going to be even more difficult.  
 6 Mr. Barcinas, Chamorros will never lose their  
 7 identity as long as people stick together and  
 8 are interested to learn. Si Yu'us Ma'ase.

MR. CONCEPCION: My name is Woodrow Concepcion. I live in Santa Rita. I never had a chance to read this EIS, but my question to the planners, because they present that this project will be finished within about four years and they anticipated probably about, what's that, 20,000 H2 workers to work on the island. So my question to the planners, what happened to the 20,000 H2 workers? Are they entitled to apply for resident alien or permanent resident because that will -- I was that the -- increase the population in, you know, astronomical. That's it. Thank you.

I-520-001

**I-520-001**

Thank you for your comment. On-island residents would be hired if they are qualified for the positions during the construction and operations periods. Because the number of qualified on-island residents would likely be exhausted, especially in the anticipated years of construction (2010 through 2016), thousands of H2B visa foreign workers are anticipated. See the detailed discussion on workers in Section 4.3 of the Socioeconomic Impact Assessment Study (SIAS).

Tel.(671)688-DEPO \* Fax(671)472-3094

COMMENTS BY MR. BRIAN SHYBULL

MR. SHYBULL: My name is Brian Shybull. Born and raised in Seattle, Washington. I came out here in 2001 for school. I married a Chamorro woman, beautiful Chamorro woman. I've got a seven-year-old Chamoale boy, and I've got two Chamorro stepsons, Aleck, 17 just turned 18 and Jake is 13.

I-521-001

My first issue, my main concern is liberty. My specific concern is what's going to happen to the culture economically over the next 6 to 8 to 10 years? There's going to be a huge peak in the economy. A lot of people are going to come on island. And then when all of that construction is done, those people are going to leave, those houses are going to be empty and there is not going to be jobs to be had. And that's going to affect the people who remain here. And this point was made to me by one of our good senators and I had an opportunity to meet him the other day. And I was really impressed that our senators are taking part in this process.

This is my message to my son. The

DEPO RESOURCES  
George B. Castro  
Court Reporter  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-521-001

Thank you for your comment. It is anticipated there would be a rapid rise in H2B visa foreign workers (for construction jobs), followed by a decline because their construction jobs would go away after structures and facilities for the buildup are completed. The result of this characteristic "boomtown" economy is discussed in the SIAS (section 1.2.2).

Residents who are preoccupied with social change and its consequences may note a large increase in crime as a result of the population growth, regard newcomers as largely responsible for the crime, and are more likely to report crime (Covey and Menard 1984; also, see "Boomtown" discussion in Section 1.2.2)."

Also, please see Figure 4.3-1 of the SIAS which illustrates that, in every year, demand for labor is expected to be higher with the proposed action than without it.

1 primary issues surrounding the current military  
 2 buildup is an issue of liberty and the  
 3 preservation of culture. We, the people have  
 4 certain unalienable rights. And our government  
 5 is by the people and for the people. Our  
 6 government is enlisted to protect liberty and  
 7 justice for all. The Chamorro people and  
 8 culture are an essential part of our most  
 9 heritage and also an essential part of our  
 10 American heritage. Without diversity, we  
 11 cannot have freedom. If we are all the same,  
 12 we all speak the same, if we all act the same,  
 13 if we all believe the same then we can be  
 14 conquered. But if we are different, then they  
 15 can never conquer us. And so, when you take  
 16 away diversity, when you squash diversity,  
 17 you're making an attack on liberty.

I-521-002

18 The United States owns outright 29  
 19 percent of the land on Guam. Following the  
 20 buildup, the United States will potentially  
 21 occupy a maximum of 40 percent of the land on

I-521-003

22 Guam. The people of Guam have yet to be  
 23 recognized as full citizens of the United  
 24 States. We do not have a vote at the national  
 25 level and we do not have a vote regarding the

**I-521-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-521-003**

Thank you for your comment. Topics such as the political status of Guam are important issues but are not part of the proposed action.

Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

I-521-004

1 military buildup. Guam is unknown to many  
 2 people in United States. My son's Chamorro  
 3 heritage is beautiful; we believe in God's  
 4 peace, we put family first. We elevate our  
 5 older generations. We are a people who embody  
 6 hospitality and service. We are a people who  
 7 say yes to those who are in need. However,  
 8 these cherished values make it easy for  
 9 invading nations to occupy our lands and  
 10 marginalize our people.

11 Since the year 1521, history has proven  
 12 this point. In my opinion, the military  
 13 buildup is plain and simple short-term  
 14 financial gain at the expense at a long-term  
 15 loss in culture. My question to the people  
 16 here tonight is in light of the fact that the  
 17 people of Guam have sufficiently lost soldiers,  
 18 culture, values and the language in the name of  
 19 Americanization, are we willing to further  
 20 sacrifice our cultural heritage and our  
 21 language, and our values at the altar of a  
 22 military buildup? Each of us will decide for  
 23 ourselves because each of us is free. We do  
 24 have a voice.

25 Before I go, I'll leave you with two

**I-521-004**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

1 short quotes. Benjamin Franklin writes, "They  
2 who can give up essential liberty to purchase a  
3 little temporary safety, deserve neither  
4 liberty nor safety." John Adams writes, "Be  
5 not intimidated nor allow yourselves to be  
6 wheedled out of your liberties by any pretense  
7 of politeness, delicacy or decency. These, as  
8 they are often used, are but three different  
9 names for hypocrisy, trickery and cowardice."  
10 Thank you for this opportunity.

1                   **COMMENTS BY MR. MIKE LIDIA**

2

3           MR. LIDIA:   Hello, my name is Mike  
4 Lidia from Tumon, and I'm a concerned citizen.  
5 My comments are specific to Volume 5 Chapter 2-  
6 2.1.   A point of contention is that the DEIS  
7 intends to bring the AMDTF to Guam despite  
8 promise associated most notably with the  
9 Patriot missiles.

10           Originally, the Patriot is intended to  
11 shoot down enemy aircraft, but just before 1991  
12 in the Gulf War, its manufacturer Raytheon,  
13 modified the Patriot to shoot down tactical  
14 ballistic missiles.   After the 1991 Gulf War,  
15 congressional   and   independent   analysis  
16 concluded that the Patriot may actually have  
17 missed every Scud it targeted.   According to 60  
18 Minutes, a 1996 Pentagon report said the  
19 Patriot had a very high fratricide level.   In  
20 the early 1990's -- excuse me, that happened in  
21 the early 1990's.

22           On March 23<sup>rd</sup>, 2003 with no Iraqi  
23 opposition flying, a Patriot missile destroyed  
24 a British Tornado fighter jet in friendly  
25 airspace, killing two men aboard.   On March

**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

80

1 25<sup>th</sup>, 2003 the American F-16 fired on a US  
 2 Patriot missile battery, south of Nadia, after  
 3 the battery radar locked on the jet.

4 On April 2<sup>nd</sup>, 2003, a Patriot missile  
 5 shot down a US Navy F-18 Hornet fighter jet  
 6 killing the pilot. I have another comment  
 7 specific to Section 2.3 -- sorry, a little  
 8 nervous, 2.3.3.3 training in Volume 5 Chapter  
 9 2. Regarding training, the DEIS seems to  
 10 simultaneously indicate that routine training  
 11 on the FAD Patriot and Slam Ram would go  
 12 through all aspects leading up to and through a  
 13 launch, but no live fire missile launch  
 14 training exercises would occur on Guam or the  
 15 CNMI. This lack of clarity combined with the  
 16 Patriot missiles history of unreliability is  
 17 disconcerting. In the course of routine crew  
 18 training, the Patriot may identify and destroy  
 19 a friendly commercial aircraft or an ocean  
 20 vessel despite FAA sanction special use  
 21 airspace. The Patriot may miss or ricochet off  
 22 the target and destroy a home or  
 23 infrastructure.

24 A Patriot experiencing mechanical  
 25 problems during a training exercise, may land,

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-522-001**

Thank you for your comment. Volume 5, Section 2.3.3.3 indicates that collective training and certification would be required for the Army AMDTF to ensure proficiency with the missile systems. Routine crew training on all aspects leading up to and through a launch would be required for THAAD, Patriot, and SLAMRAAM weapons systems. No live-fire missile launch training exercises would occur on Guam or in the CNMI. Therefore, because no missile launch activity would occur as part of training exercises, there would be no potential for missing a target or having an unexploded missile impact on Guam or CNMI as a result of training. Army AMDTF launches would only occur in real emergency situations, to protect Guam from immediate threats.

DoD has been a longstanding member of the community. The intent of the proposed Army Air and Missile Defense Task Force component of the proposed action is to protect the territory of Guam, its citizens, and U.S. forces on Guam from the threat of harm from ballistic missile attacks from other countries and enemies of the U.S. Defense of Guam will continue to be a focus of the DoD.

**I-522-001**

I-522-002

1 unexploded, in the earth, until a disturbance  
2 causes it to explode. A misfired Patriot  
3 missile, FAD or Slam Ram, may land in a  
4 forested area to explode and cause a forest  
5 fire. Sorry about the shaking hands.

I-522-003

6 Large amounts of toxic materials go in  
7 to the formulas and manufacturers of creating  
8 the FAD Patriots slam ram and propulsion  
9 system. The chemicals and the explosives in  
10 propulsions of the FAD Patriot and slam ram may  
11 be toxic and highly carcinogenic. The fuels,  
12 lubricants and solvents used by the vehicles  
13 and tripods have carried the FAD Patriot, slam  
14 ram missiles maybe toxic and highly  
15 carcinogenic. Guam suffers from an erosion  
16 problem, coccus rainfall along with an  
17 antiquated storm water system may elude the  
18 best manager practices the DEIA touts to  
19 mitigate erosion and pollution. Therefore,  
20 toxic and highly carcinogenic waste and  
21 unexploited ordinance from the FAD Patriot slam  
22 ram may litter the landscape and pollute the  
23 soil until those toxins make their way back  
24 into our food and water sources. Toxic and  
25 highly carcinogenic waste may cause cancer in

**I-522-002**

Thank you for your comment. Please see response above.

**I-522-003**

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, propulsion system materials, etc. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances. When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These actions will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, propulsion systems, explosives, or other hazardous substances.

COMMENTS BY MR. BRIAN MEEKS

I-523-001

1  
2  
3 MR. MEEKS: Good evening. My name is  
4 Brian Meeks. I'm 15 years old, and I reside on  
5 this beautiful island of Guam in the village of  
6 Agat. I grew up here on this island, and I've  
7 been here long enough to know that our culture  
8 is dying. What is happening to us Chamorros,  
9 is it because of the buildup? It is important  
10 to me because Guam is already getting over  
11 populated and our island is too small to handle  
12 all the 80,000 Marines who are coming to Guam,  
13 including the military sticking our land  
14 without our permission. Sure, we gain a lot of  
15 money but we lose a lot of our properties.

I-523-002

16 I oppose this buildup for what they  
17 have caused back in the Philippines and in  
18 Okinawa. For many cases were caused by rape.

I-523-004

19 Thus, I am concerned about the raise of toxic  
20 waste that is increasing in hazardous  
21 materials, storage use, handling generation and  
22 disposal, increase in fueling operations. If

I-523-005

23 anything was to go wrong during construction  
24 activities, increases the risk in human health  
25 and environment to include terrestrial and

**I-523-001**

Thank you for your comment. The population estimates in the Draft EIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The EIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Final EIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40% of Guam's population in the 2000 U.S. Census. Chamorro concerns involving political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control.

More information on this topic can be found in the Environmental Justice and the Protection of Children chapters of the Final EIS, specifically, Chapters 19 in Volumes 2, 3, 4, 5, and Chapter 20 in Volume 6, and under cumulative impacts (Chapter 4) of Volume 7.

**I-523-002**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

I-523-006

1 ecosystem. And the only way Guam can get its  
2 money as they promised us, is if the  
3 construction workers they have given us are  
4 done building the military as they ask for.

5 So, please don't use our island as a  
6 desert wasteland because you know we are people  
7 who have a say on this. Why don't you just  
8 bring all the material back to United States?  
9 Our island is already giving with so major and  
10 minor difficulties. Why don't you Marines go  
11 back home to your families and friends and just  
12 relax? So, if something is wrong there, you  
13 will be there to protect them. Guam is already  
14 at peace. We don't want to start a war with  
15 other people. We are fine the way we are. Si  
16 Yu'us Ma'ase.

17  
18  
19  
20  
21

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

**I-523-003**

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction

phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

**I-523-004**

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, propulsion system materials, etc. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances.

When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs and other controls are fully described in the EIS document. These actions will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, propulsion systems, explosives, or other hazardous substances.

**I-523-005**

Thank you for your comment. Volume 2, Section 17.1.2 discusses the

laws and regulations that must be followed during construction and operations to ensure public health and the environment are protected. Hazardous substances are controlled by laws and regulations administered by the U.S. Environmental Protection Agency (USEPA), the U.S. Occupational Safety and Health Administration (OSHA), and the U.S. Department of Transportation (DOT). Additionally, the U.S. territory of Guam oversees and administers its environmental laws and regulations through the Guam EPA (GEPA). Construction contractors are required to comply with applicable federal and territorial (e.g., GEPA) laws and regulations regarding the storage, handling, and disposal of hazardous substances.

**I-523-006**

MS. TERRAL: First of all, my name is Olympia Terral, and I'd like to apologize to all the Chamorro people here that I've lived in Santa Rita for 22 years and I cannot address you in Chamorro. To the United States Government, I say, liar, liar, panties burn. Yes, we must say no to this buildup and we must look at Guam as if it were a human body. And the eyes are the north and they've been taken. And the kidney is Sumay and it has been taken. And now they dare, they have the audacity to want the other kidney, the lakes, and all the parts below. And I think we should say, "No", the people of Guam should say, "No." Thank you.

COMMENTS BY MR. KEITH CAMACHO

1 MR. CAMACHO: Hafa adai, taotao  
2  
3 Marianas. I just want to say before I begin, I  
4 appreciate the comments from my elders, from my  
5 peers, I see some of them in the audience and  
6 from our elected officials. My name is Keith  
7 Camacho, I'm a professor of History, Indigenous  
8 Studies, Ethnic Studies, and I represent UCLA  
9 and the University of Urbana Champagne. And  
10 there are many points said today and many  
11 points said earlier and I just want to mention  
12 three.

13  
14 One, the myth of economic prosperity  
15 and progress. Two, white institutional racism;  
16 and three, Guam, CMNI, Federal relations, our  
17 local relations. So, I'll just be very brief  
18 here. First, there's this myth of economic  
19 progress happening in the media, happening in  
20 our poster boards behind us, happening  
21 everywhere. As our peers have already said  
22 earlier, what's going to happen to our island  
23 is increased illiteracy, increased poverty,  
24 increased interethnic and intra-ethnic strife,  
25 increased social ills on a grand scale. I am

I-525-001

Thank you for your comment. The Final EIS analyzes a number of subjects identifying the potential positive and negative impacts of the proposed action. Many of the beneficial impacts attributable to the proposed action are based on jobs and money (from construction and operational expenditure) that will flow into the economy. That specific information can be found in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F of Volume 9 in the EIS as well as the socioeconomic chapters of volumes 2 through 7. Jobs analysis was based on the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. By 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and Freely Associated States of Micronesia) in search of jobs, to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs. It should be noted that the jobs that Guam residents would fill are based on the available supply of qualified workers. That is, it is anticipated that the new jobs would capture the amount of qualified workers on Guam for those positions.

Economic benefits would also occur through the circulation of construction and operational dollars spent on Guam and the multiplier affect (recirculation of money) in the Guam economy. The economic benefit also consists of revenue to the government of Guam in form of taxes, user fees, and permits and approvals. Another area where benefit is seen is that the local businesses would be able to sell their goods and

I-525-001

1 not speaking just from a Marianas perspective,  
 2 I'm speaking from a perspective that examines  
 3 urbanization in Brazil, in Los Angeles and  
 4 other places.

5 So, one, this is a myth. We are not  
 6 economically prospering, all right? A lot of  
 7 our people still have to struggle to find basic  
 8 Medicare, a lot of our people have to find  
 9 basic food for the table. This military  
 10 buildup will not prosper for us.

I-525-002

11 Two, white institutional racism. What  
 12 do I mean by that? In US Federal legalese, in  
 13 US Governmental legalese, in US Military  
 14 legalese, indigenous people never matter.  
 15 Chamorros never matter, Hawaiians never matter,  
 16 Cherokee never matter, Apache Tonga never  
 17 matter. And so I think we should be very clear  
 18 about the propagandizing process happening here  
 19 is that, in the last instance, the US Federal  
 20 government does not care about the Chamorros,  
 21 not only of Guam, but the CNMI and islanders in  
 22 the wider Micronesian region. And if you want  
 23 to talk more on these things, you can talk to  
 24 me afterwards. There's a whole robust  
 25 literature on these issues.

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

services during both the construction and operational periods. Volume 6 of the Draft EIS describes the existing utilities and infrastructures on Guam as well as the proposed actions that would provide the capacity needed for the additional population. Each utility is covered and for each one, the preferred actions (to achieve adequate capacity) are identified. In some cases, additional capacity with better treatment (i.e., wastewater) is being proposed. Roadways essential for the buildup would be improved, widened, and some bridges replaced by funds provided under the Defense Access Road (DAR) program.

**I-525-002**

Thank you for your comment. The items identified in this comment are not part of the proposed action and are therefore not addressed in the EIS.

Thank you for your comment.

I-525-003

1 Final point, how does this impact Guam  
 2 and the CNMI? Some of you are familiar that  
 3 there's already a federalization buildup that  
 4 was passed under George Bush's past, you know,  
 5 presidency. Now, the federalization of the  
 6 service language says, we're here to stop labor  
 7 disparity, we're here to stop labor inequity in  
 8 the Northern Marianas. That's not true. As  
 9 Cohen, as a lot of the federal government  
 10 officials, as I've said already, is  
 11 federalization in the NMI bottom line is to  
 12 militarize the islands. And so, I know and I'm  
 13 short of time.

14 So, what does this all mean? The myth  
 15 of economic prosperity, white institutional  
 16 racism, and the impact of the Guam and CNMI  
 17 level. What it means is in the long projection  
 18 is that Chamorros, our lands, our seas will be  
 19 taken from us and there's a long history around  
 20 these issues, and so, I just want to say that  
 21 I'm very grateful to be here and I appreciate  
 22 the youth and the elders talking for and  
 23 against these issues. And so, I just want to  
 24 continue and thank everybody that we welcome  
 25 these kinds of debates. Thank you.

1                   **COMMENTS BY J RAE TEDTAOTAO**

2  
3           MR. TEDTAOTAO:     My name is J Rae  
4 Tedtaotao. I think we should all represent we  
5 are Guahan, but yeah, it's where -- okay. This  
6 is a poem; it has something to do about the  
7 buildup. "At the age of 11, his third grade  
8 teacher after class, what would you do if you  
9 had a land to call your own? Little Bobby  
10 always sat in the back, never cared about the  
11 lessons but something about this question  
12 caught his attention. He shot his hand up high  
13 enough for the teacher to see it and waved his  
14 five fingers so vigorously as if his life  
15 depended on it, and yelled, 'Miss, pick me'.  
16 If I had a land to call my own, I'd build the  
17 biggest amusement park with roller coasters  
18 that twist and tangle into each other so the  
19 kids would throw up after riding it. All my  
20 vendors would give out free cotton candy and  
21 ice cream and snow cones with every flavor you  
22 could think of. I would love to have a land to  
23 call my own. Seven years later, Bobby still  
24 stays in the back of every conversation, even  
25 the ones that include the future of our island.

1 He always splits the information in half,  
 2 separating the truth from the sugar-coated BS  
 3 that they give us like this buildup will boost  
 4 up our economy, bringing more jobs and even  
 5 more money. Bobby, don't you find it funny how  
 6 the documents say that being put here is  
 7 protection, but Okinawa citizens say that being  
 8 kicked out is rejection? Bobby, pay attention.  
 9 There have been articles of civilian  
 10 disturbance and even more that we haven't heard  
 11 of from those who choose to stay silent, crimes  
 12 of violence, burglary, sexual assault.  
 13 Research say that the people were forced to  
 14 live under danger from possible crimes caused  
 15 by military soldiers even walking to and from  
 16 school. Teachers advise their students not to  
 17 take the roads near the bases, even though  
 18 they're shortcuts. Children end up being  
 19 beaten and raped. Some children gone missing.  
 20 Bobby, are you listening?

21 The news reporters say, the plan is to  
 22 deal with some weapons of mass distraction,  
 23 take more land spaces to build bases, they're  
 24 calling it a shield but really it's a target  
 25 range. Apra Harbor will be the next Pearl

### I-526-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is in Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at a lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by a proportionate increase in crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

I-526-003

1 Harbor. We're giving our land away, and soon  
 2 military bases will not be on Guam. Guam will  
 3 be on military bases so don't turn your faces.  
 4 It kills me to see that the Chamorros who I  
 5 thought would stand up for our island are just  
 6 another bunch of Bobbys who choose to stay in  
 7 the back of every conversation even the ones  
 8 that include the future of our island.

9 Bobby, please, think back to third  
 10 grade and remember the question they asked you.  
 11 'What would you do if you had a land to call  
 12 your own?' Raise up your hand high enough for  
 13 the road to see it and pump your fist so  
 14 vigorously because your life depends on it and  
 15 tell them, "I don't need to imagine having a  
 16 land to call my own. I already have one. I  
 17 just call it home." Thank you.

**I-526-002**

Thank you for your comment.

**I-526-003**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

I-527-002

1 took Sumay and used it for their military.  
 2 They made us citizens but denied us the votes.  
 3 They stole our language and made us speak  
 4 English. In our history books, they say that  
 5 we're free, that we're making good money from  
 6 tourism. But as I drive to Tumon, my view of  
 7 the ocean obstructed by the Outrigger and the  
 8 Hyatt, I think of the stories Tata used to tell  
 9 me about the latte stone huts that once lined  
 10 the ocean, and how they were bulldozed to keep  
 11 up with the times [speaks in the Chamorro  
 12 language; my people are not free]. My people  
 13 are not free. [speaks in the Chamorro language;  
 14 wake up people of Guahan] because our island is  
 15 about to get reoccupied and re-destroyed. If  
 16 we don't fight, especially young people and the  
 17 elders, I do respect you and I understand where  
 18 you come from. But we have to think of our  
 19 future, our children, ourselves because we  
 20 won't have a land to call home. Si Yu'us  
 21 Ma'ase.  
 22  
 23  
 24  
 25

**I-527-002**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

1                   **COMMENTS BY MS. MARTINA NELSON**

2  
3                   MS. NELSON:   Hafa adai.   My name is  
4 Martina Nelson.   I am from the village of Yigo.  
5 Two very tough acts that I have to follow, but  
6 in the interest of time, I will keep this  
7 brief.   As the daughter of Sassagin (phonetic)  
8 landowners, I am very concerned with how this  
9 buildup will impact our community.   But I  
10 wanted to reflect on some of the comments a  
11 gentleman earlier spoke passionately about.   He  
12 has mentioned, he was concerned because he has  
13 daughters, okay?   Volume 2 Chapter 18 indicates  
14 that the peak construction period will  
15 contribute to the increase of sexually  
16 transmitted diseases in the community.

17                   Now,           despite           research           from  
18 criminologists, including Dr. Catherine Lutz of  
19 Brown University, the research states that  
20 Marines and sailors on shore leave are  
21 notorious for sex industry consumption.   Now,  
22 despite this research, the DEIS alleges that  
23 the impact on our community is less than  
24 significant, okay, as military installations  
25 have their own hospitals and clinics.   Now, I

The FEIS has been updated (Volume 2) to better address impacts on social services.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

Volume 2, Section 16 specifies that the DoD would rely on construction contractors, who have significant expertise in the areas of workforce housing and logistics, to support temporary foreign workers. There would be health screening of all workers to reduce health risk to the Guam population. Contractors would also be required to provide health care either by supplementing local Guam staff and resources or building their own clinic. The Naval Hospital Guam in Agana Heights offers medical care to military personnel, military dependents, veterans, and in case of emergency, civilians. The military also runs small outpatient clinics at Andersen AFB and on the Naval Base.

1                   **COMMENTS BY MR. SIMEON PALOMO**

2

3                   MR. PALOMO: Hello everyone, my name is

4 Simeon Palomo from the village of Mongmong.

5 Very quick because it's almost -- you know, is

6 still have my daughter, she has school

7 tomorrow. Anyway, I personally have a lot of

8 reservations about the DEIS but, you know,

9 everyone spoke eloquently, I agree with most of

10 their comments. The only concern I have is

11 that the presenter, I don't know his name, he's

12 from the military he mentioned that the EIS is

13 going to be signed by the Secretary of the

14 Navy. And as we all know that, you know, Guam

15 has a long history with the Navy, good and bad.

16 I challenge the federal government to you have

17 President Obama sign the EIS, I mean, as a

18 fellow Pacific islander, I think he should know

19 what's going on, I mean, he should come and

20 visit Guam before we even start any

21 construction or anything. Any decision and,

22 you know, I mean, I was a big supporter of

23 Obama, I mean, I was so happy that he won. I'm

24 glad, you know, he is one of us, but I

25 challenge the federal government that Obama

I-529-001

**I-529-001**

Thank you for your comment. This is an important project for the DoD, and it has high-level visibility at Presidential and Congressional levels. However, the Record of Decision will be signed by the Assistant Secretary of the Navy.

**DEPO RESOURCES**

1 sign the EIS not the Secretary of the Navy, I  
2 mean, I don't know where the buck stops, but  
3 just from what he said is that the Secretary of  
4 Navy is the one to sign the EIS. But I think  
5 Obama should at least, you know, I personally  
6 would feel better if he reads it and if he  
7 reads it then maybe he will, you know, I mean  
8 he will have reservations like all of us. I  
9 mean, you know, he does come from an island too  
10 and that's my only comment. It's that I hope  
11 President Obama makes an effort to come to Guam  
12 first, see what's, you know, see what the  
13 people -- all of our feelings and our  
14 reservations, and our, you know, yeah, come  
15 visit us first because, I mean, as they say  
16 this is the biggest military operation in  
17 history. Then I think our leader who we cannot  
18 vote for should at least come and, you know,  
19 take ownership. Thank you.

1                   **COMMENTS BY MR. MELVIN WON PAT BORJA**

2

3                   MR. BORJA:   Hafa adai.   My name is

4 Melvin Won Pat Borja and I'm from the village

5 of Malojloj.   It is no secret that Guam's

6 economy is in the gutter.   We have seen some

7 hard times in recent years and many of us are

8 struggling to find work, struggling to pay rent

9 and struggling just to put food on our tables

10 to feed our kids.   So when we first heard about

11 this military buildup, it was easy to get

12 caught up in the talk of 33,000 new jobs and

13 millions of tax dollars because when the people

14 are starving for hope, it is easy for them to

15 be misled by empty promises and half-truths.

16 But let me be the man who refuses to sell you

17 lies.   I am here to tell you that this buildup

18 is a wolf in sheep's clothing.   It is a trojan

19 horse sent to destroy our lives as we know

20 them.   They will tell you that there are 33,000

21 new jobs to be had but they will not tell you

22 that Guam residents will only receive 17% of

23 those jobs and that most of them are merely

24 temporary construction work that would no

25 longer exist.

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-530-001**

Thank you for your comment. Jobs analysis was based upon the number of dollars estimated to enter the Guam economy as a result of the proposed action. Overall, at the 2014 peak of construction and beginning of operations, the civilian labor force demand with the proposed action is 75% higher than it otherwise would have been without the project. At 2020, the difference declines to 12%. Analysis took into account historical information of people arriving on Guam from other areas (such as the Philippines and FAS) in search of jobs, in order to determine the number of new jobs generated by the proposed action that would go to Guam residents. Overall, analysis indicated that at the 2014 construction peak, Guam residents are expected to capture approximately 2,566 jobs and off-island workers would take 15,157 jobs. By 2020, the number of these jobs filled by Guam residents would decrease to 2,211 jobs, and off-island worker jobs would decrease to 3,935 jobs.

As the construction portion of the proposed action winds down, it is expected that the number of total jobs on Guam will stabilize at a level above the current situation. The fluctuation in the number of jobs is expected to be greatest in the construction industry. Job training for work in the construction industry would be beneficial to Guam's workforce overall. There are a number of other industries which currently have labor shortages and are expected to have bigger shortages than at present; job seekers on Guam should diversify the industries for which they seek training and entry. For example, the Socioeconomic Impact Assessment Study (Appendix F of the DEIS), notes that the healthcare industry is currently short of workers, and that the need for workers after the proposed action is expected to be stronger than at present. This is also the case for other industries, such as the wholesale trade industry, where job opportunities in occupations such as sales, truck driving, computer/administrative services and clerking are expected to increase above the present level.

I-530-001

I-530-001

1           Once their bases and houses are built,  
2 they will tell you that there are civilian  
3 military jobs to be had but they won't tell you  
4 that Guam residents will only receive 25% of  
5 those jobs and that most of them will go to  
6 military dependents off island and workers.  
7 They will tell you that this buildup is good  
8 for the economy but they won't tell you that  
9 the EIS states that Guam workers will likely  
10 continue to see the cost of goods and services  
11 rise faster than their incomes. If you think  
12 that you are hurting now, imagine what your  
13 life will be like with 80,000 more people to  
14 compete with.

15           Imagine Upper Tumon housing 4,000  
16 workers, imagine Harmon housing 1,900 workers;  
17 and for all of you Dededo residents, imagine  
18 what your lives will be like when there are  
19 18,000 foreign workers living in your backyard.  
20 And if you think that our schools are over  
21 populated now, imagine what they will be like  
22 when the number of students increase by 20%.  
23 These are the burdens that the bases will not  
24 bear.

25           We, the people of Guam will be forced

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-530-001

1 to accommodate the increase in population with  
 2 our already limited resources. And they say  
 3 that the military is going to invest in Guam  
 4 but they only proposed to add 15 more doctors  
 5 for 80,000 people. Way even when the national  
 6 average is 25.9 doctors for every 10,000  
 7 people. They say that they want to invest in  
 8 Guam's water but they build more wells even  
 9 when the EIS says that freshwater resources  
 10 could be depleted in 30 years. Why else would  
 11 they propose a desalination plan as a long-term  
 12 solution?

I-530-002

13 Let us not forget that they stole Fena  
 14 Lake and had the audacity to charge us for our  
 15 own water. And even if the 17% of jobs will  
 16 give us to provide our families with temporary  
 17 income that we'll have, what will happen when  
 18 the money runs out, and believe me, their money  
 19 will run out. And what happens to all of the  
 20 foreign workers who decide to stay on Guam even  
 21 after the construction is complete, the EIS  
 22 assumes that they will all just suddenly  
 23 disappear. I grow tired of listening to their  
 24 proposals and preferred alternatives especially  
 25 when they have not given us the same courtesy

**I-530-002**

Thank you for your comment. A reference of where the EIS states that freshwater sources could be depleted in 10 years would be appreciated. We don't know of where in the EIS this is stated. Per a recent paper, the Water and Environmental Research Institute (WERI) of the University of Guam confirmed the assumptions used in the 1991 northern Guam lens aquifer, which concluded that the sustainable yield of the aquifer is approximately 80 million gallons per day. The estimated groundwater needs during the peak of the proposed DoD buildup is approximately 63 million gallons per day including the current high rate of unaccounted for water in the Guam Waterworks Association system. Thus there should be an adequate supply of potable water. The potential long-term alternative of desalination was retained in the remote chance that the preferred alternative proves inadequate to meet future demands.

A pertinent issue on potable water is the amount of unaccounted for water in the Guam Waterworks Association (GWA) system. At over 50%, if most of this unaccounted for water is due to leaks in the system, fixing those leaks would go a long way toward meeting most if not all of the future needs on Guam without having to construct any new wells or extract more water. In the first year of a leak detection program, GWA has found about 4 million gallons a day of leaks. Those need to be fixed and the effort should be energetically pursued.

DoD remains committed in being an advocate for GWA in their search for grants and low-cost loans to accelerate repair of their water system. The DEIS discusses desalination of sea water as a possible option in the future in the event that GWA, GEPA and DoD jointly determine that groundwater wells are not the preferred means to meet water demands on Guam. This option does not indicate that DoD plans to deplete the available groundwater on Guam; rather, it demonstrates DoD's commitment to consider all options for water supply, and commitment to preserve Guam's sole-source aquifer.

I-530-004

1 and allowed us to decide for ourselves what is  
 2 best for our island.

3           So, my dear people of Guam, let us  
 4 raise our voices so they are loud enough to  
 5 hear, louder than the 99,000 jets that can be  
 6 heard 17,000 acres away from their air base.  
 7 Loud enough so they can hear us through their  
 8 sound proof homes that only exist on base,  
 9 louder than their live firing range that will  
 10 take Pagat, Sassagua Valley and to see Yigo  
 11 race track louder than the training range on  
 12 Mount Lamlam. We must speak so loud that the  
 13 wall will hear of this injustice! Again, Guam,  
 14 the people, so let us put -- get out of your  
 15 sit, put your fist in the air and let our  
 16 voices be united! State for the record that  
 17 Guam said no!

**I-530-003**

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) for discussion of economic impacts. Analysis in the Socioeconomic Impact Assessment Study (SIAS) extends to the year 2020. By the year 2020 it is expected that activities related to the proposed action will be in a steady state, meaning they would not be expected to change drastically from that point to any foreseeable point in the future; these are not considered temporary impacts rather, long-term impacts.

The majority of construction workers who migrate to Guam for work are expected to be H2B workers who would be in Guam on temporary work visas, the H2B workers are required to leave Guam once the job they were brought in for is complete.

**I-530-004**

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources, and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Thank you for your comment.

I-531-001

1                   **COMMENTS BY MR. PHIL CRUZ**  
2  
3           MR. CRUZ: My name is Phil Cruz and I  
4 live in Yigo. I'm not representing any special  
5 interest groups, organization clubs,  
6 individuals or family. I'm here on my own  
7 behalf. And it's obvious out here that we come  
8 from different walks of life, different social  
9 status and whatever and for -- in saying that,  
10 it's safe for me to say that there are some  
11 amongst you who are for the military buildup  
12 and some are opposing it. Whatever your  
13 reasons or your agenda, it's none of my  
14 business so I'll leave it at that.  
15           I've served 20 years in the military,  
16 ready to stand and defend the red, white and  
17 blue and if need be, lose my life in the  
18 defense of freedom. Now, I come back after 20  
19 years to find out that my freedom of speech,  
20 the same freedom I've been fighting for, is  
21 limited. My response to this, I am not anti-  
22 American but I maybe anti-Draft EIS. So I want  
23 to speak from three different standpoints.  
24           First, as a descendant of my  
25 grandfather who participated in World War II.

I-531-001

1 I'll take your three minutes but a comparison  
2 to 65 years that the United States has not  
3 compensated, made any effort to compensate our  
4 Chamorro people who stood by their side during  
5 the war, who were -- where atrocities were  
6 committed upon them by the Japanese. My  
7 question to the red, white and blue is this,  
8 who made you judge and jury to forgive and  
9 relieve the Japanese for their wrongdoings to  
10 the Chamorro people?

11 From the standpoint of a military,  
12 there are many of my brothers and sisters,  
13 Guam's fallen sons and daughters that have  
14 passed on. They were ready, loyal, pledged the  
15 absolute allegiance to the red, white and blue  
16 and we are still treated as second class  
17 citizens. We do not reap the benefits that the  
18 constitution provides for the other people in  
19 the 50 United States, yet, we remain loyal. I  
20 am not anti-American for I, too, have served  
21 the military and this is my uniform. And as  
22 long as God permits me to live and breathe on  
23 this land, this uniform will stay in top fit  
24 condition because it symbolizes two things to  
25 me. One, that I will remain loyal to United

1 States and stand ready to answer their calling,  
2 but number 2 which is more important. My  
3 brothers and sisters who have died before me  
4 and will die after me will always be  
5 remembered. This is how you treat our people?

6 I wrote a song called "Guam's Fallen  
7 Sons." It is written by me because I don't  
8 believe anybody in the United States, in my  
9 lifetime will ever write a song about the  
10 Chamorro people who died and fought under the  
11 red, white and blue.

12 In closing, I want to say the military  
13 has all the resources it needs for its mission.  
14 It has the money, it has the people, it has the  
15 personnel. What it doesn't have, Chamorros and  
16 all the people of Guam, is land. And whether  
17 you know it or not, for those people who have  
18 land in these proposed areas, you hold the key  
19 to Guam's future and his people.

20 So, when the military comes up to you,  
21 please think of my children and your children  
22 and those people holding up beside for JFK.  
23 Thank you.

24  
25

COMMENTS BY MS. TRINI TORRES

1  
2  
3 MS. TORRES: [speaks in the Chamorro  
4 language; Good evening. I'm Trini Torres of  
5 Mongmong-Toto-Maite, Chuchugu (phonetic) the  
6 largest village where the bosses, the  
7 Chamorros, were previously fighting. Good  
8 evening, thank you for allowing me to speak,  
9 I'm Trini Torres of Mongmong-Toto-Maite and  
10 Chuchugu. One of the biggest village. That  
11 was the area of our high chiefs.

I-532-001

12 Let me say to our people that none of  
13 our leaders [speaks in the Chamorro language;  
14 Maga Haga and Maga Lahi, the chief or the wife  
15 of the chief has never surrendered, no one has  
16 ever surrendered, still there remains  
17 sovereignty, liberty, it still remains with us,  
18 this must be considered by the United States  
19 that the people of Guam are still free  
20 including the entire Marianas. No, we are not  
21 cowards, there has never been any chief that  
22 has ever surrendered. The women then didn't  
23 like for the Spaniards who came here to rise  
24 up and wipe out the women but we know in our  
25 hearts that the women are the strongest, and

**DEPO RESOURCES**

Thank you for your comment.

1 the men also stood up to fight whomever, they  
2 too never surrendered, they were killed by the  
3 Spaniards.

4 The ones who were hiding would flee to  
5 Rota, Tinian and Saipan. Then, once in a  
6 while, they would come back and fight again  
7 with the Spaniards. Their only weapons were  
8 their sticks, clubs and brute strength]. What  
9 I'm saying is are Chamorro people never gave  
10 up. None of our leaders, women leaders or men  
11 leaders, Maga Haga, Maga Lahi ever surrendered  
12 our freedom.

I-532-002

13 The US and Spain came into an  
14 international agreement not including the  
15 Chamorros, the people, the aboriginal people of  
16 the land to be in their paperwork. Also Japan;  
17 right? They came in and killed our people,  
18 they committed atrocity [speaks in the Chamorro  
19 language; wait a moment, excuse me] --  
20 committed atrocities, raped our women who are  
21 so ashamed to admit that they were raped, and  
22 they thought they were -- yeah, the ones who  
23 fell; right? No, the US forgave Japan for  
24 every -- all the atrocities they did including  
25 raping our women, beheaded our people, without

I-532-003

1 including Guam, [speaks in the Chamorro  
2 language; us Chamorros, they did not include us  
3 in the agreement]. The Chamorros were never  
4 included in any international agreement.

5 So, we are still a people, a free  
6 people, but we need to rise up like our youth  
7 are saying, "You need to rise up! Because we  
8 are still free!" we have to know that, we need  
9 to realize that [speaks in the Chamorro  
10 language; wait again, I have something to say  
11 to them. You guys are Chamorros, right? They  
12 look at us like we are afraid and we don't know  
13 nothing and we are so generous from our heart].  
14 We give everything, we're so generous. We were  
15 thought to give to be kind to people and they  
16 think of it as a weakness, our failures. No!  
17 Don't ever change. Do not change because of  
18 those people who regard us as being weak,  
19 because they themselves are not generous or  
20 kind or considerate. They came to steal, to  
21 conquer, to step on our necks. We must not  
22 give up.

23 MR. GUZMAN: [speaks in the Chamorro  
24 language; let the others speak.]

**I-532-003**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

Thank you for your comment.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 408

Received: 2/9/2010 5:13:58 AM

#### Direct Quote from the EIS:

"43% of active-duty military personnel admit to frequent binge drinking. In addition, 67.1% of binge-drinking episodes were reported by personnel aged 17-25 (representing nearly half of all active-duty military personnel), and a quarter of those episodes were reported by underage personnel (Central Broadcasting Service News 2009)." (Vol.2, Ch. 16, Pg. 1092)

#### My reaction:

I'm concerned with this issue for many reasons. We're going to have about 80,000 military personnel relocated to Guam from Japan. If almost half of them are frequent binge-drinkers, how will this affect Guam? This along with many problems coming from the buildup will impact our island. Most residents, along with their families may not feel safe with what's coming in the near future. Everyone knows what alcohol does to people, so just imagine what it would be like for there to be 35,000+ frequent binge-drinkers arriving on island.

#### A solution:

I think a possible solution could be to move all or most night clubs, bars, or other places like that. Since the government already wants to move them out of Tumon for a better tourism industry, I think it would be a good idea to relocate the night life clubs and bars near or around military installations so more people may benefit.

I-534-001

### I-534-001

Thank you for your comment. There are many reasons why the Marines (about half) are being moved from Okinawa. This discussion is provided in section 3.5.2 of the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Draft EIS. Serious crimes by military personnel in Okinawa are committed at lower rate than the overall civilian population in Okinawa, despite reports to the contrary. Many serious crimes are based on singular incidents that are reported multiple times so that it appears to be multiple incidents.

The impacts of crimes on Guam are discussed in Volume 2 of the FEIS. As noted in the SIAS: "A critical distinction when analyzing crime impacts is between the total numbers of crimes ("volume of crime") and the actual crime rate (numbers divided by population). Population increases always bring with them increases in the volume of crime, but the crime rate would increase only if new populations are disproportionately likely to commit crimes."

The DoD acknowledges that any increase in population, such as the one that these proposed actions would cause, may be accompanied by an increase in overall crime and social disorder. The DoD also acknowledges that widely publicized instances of military crime in Okinawa cause Guam residents to be concerned about possible repercussions on the island brought about by the increase in military population on Guam. The increase in population during the construction phase of the build up is recognized as a time for concern for increases in incidents of crime. Moreover, it is also acknowledged that the age group of many military personnel is often characterized as prone to conflicts and misbehavior. DoD educates its service men and woman on good behavior and will act promptly and rigorously to curtail any misconduct and enforce laws to protect the citizens of Guam and our military personnel.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 409

Received: 2/9/2010 8:50:34 AM

the tourism industry on Guam is one of the main factors for our economy. Tourists come to the island for the warm weather and its overall environment, which also includes Guam's marine life. In volume 2 chapter 16, page 66, there is a paragraph on "Impacts on Ocean-Based Tourism from Environmental Degradation." Within this section it states that the tourists are attracted to "scuba diving and submarine rides." This section also states that the dredging at Apra Harbor will not produce impacts to our marine tourism. Whether it may or may not have an impact on our tourism, this statement is stressing the fact that coral reefs are not important to humans and that it is not wrong to destroy them. However this area can serve as a tourist attraction also. It can be viewed by scuba divers or by submarine rides. The main point is that this reef shouldn't be destroyed even though it does not play a big role in our tourist attraction. Destruction of this reef can cause a disruption for the island's marine life food chain.

I-535-001

### I-535-001

Thank you for your comment. As identified in the EIS, the proposed dredged area within the active commercial harbor was previously dredged over 60-years ago and maintenance dredging activities continues. The Navy has considered the potential impacts to water quality, coral reef, and marine ecosystem from the proposed action and has developed a list of policies, procedures, mitigation measures and best management practices to lessen these impacts. Land-based construction activities require permits, which include BMPs that help contain and reduce sediment and pollutant discharges into nearby waters. The Navy, along with local agencies have a role ensuring proper management of these permits and BMP methodologies. Additionally, the Navy will implement low impact development (LID) or stormwater management strategies during construction activities. The goal is to maintain or restore the natural hydrologic functions of a site to achieve natural resource protection objectives and fulfill environmental regulatory requirements. New wharf structures in Apra Harbor will have cyclonic stormwater devices that treat water before discharging to the harbor. The Navy will also implement and properly manage mitigation measures and BMPs during in-water activities (dredging, wharf construction) that include Army Corps permits requiring silt curtains, biological monitors, halting of dredging activities during potential coral spawning months, and compensatory mitigation projects to help improve nearshore water quality through upland watershed reforestation and/or artificial reef construction, to name a few. Even after efforts by DoD to minimize and avoid the impacts of the aircraft carrier project, there still remain unavoidable adverse impacts associated with dredging coral reef ecosystems in Outer Apra Harbor. Unavoidable significant impacts to coral reef, other immobile invertebrates, and some site-attached reef fish associated with dredging activities will be seen. A majority of the species are expected to vacate the area and return when in-water construction is completed. Additionally, most of the area to be dredged has less than 30% coral coverage (i.e. 60% rubble, sand, and

algae) and is of moderate health based on dive surveys. This area was chosen because it is the least environmentally damaging. The ecologically important (and for tourism) shoal areas (western shoals, middle shoals, jade shoals, big blue reef), will not be impacted by direct dredging activities. In addition, based on computer modeling, taking into account tides and currents, there are no indirect (sedimentation) impacts anticipated. Additionally, there are no significant impacts to Sasa Bay or any mangroves anticipated from the proposed action. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 410

Received: 2/9/2010 9:11:13 AM

I agree with the conditions of the roads being said in volume 6, 4.1.1.2. there is always heavy amounts of traffic going certain directions on island during certain times of the day. the scheduled time for public transportation oare not being followed, for example the mass transit tends to arrive at the bus-stop earlier than their timed schedule. there are also not so many sidewalks for pedestrians to use. Most of the usable sidewalks fare in the central part of Dededo until the end of Tamuning. If there were more sidewalks that led to more destinations on island and also better crosswalk signals, then there can be a possibility that there will be more bicycles being used than vehicles. This is due to the fact that the gas prices are skyrocketing leaving the minimum wages in the dust.

I-536-001

### I-536-001

Thank you for your comment. On July 9, 2008, Title 5 of the Guam Code Annotated, Article 1, Chapter 54 was revised to add § 54105 Bicycle Lanes and Pedestrian Ways. This new law requires the inclusion of bicycle lanes and pedestrian ways to be part and parcel of the planning, development, construction, reconstruction or other change of transportation facilities, plans, programs of primary and secondary roads where it can be safely implemented.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 411

Received: 2/9/2010 10:15:38 AM

I-537-001

I-537-002

I-537-003

I-537-004

My Concern is in our government's healthcare, utilities, education and Ancestral lands. With the military buildup approaching the Government of Guam obviously does not have the adequate staff as well some resources in our hospitals to even take care of the local people here on island. How is the Government and the U.S. Government going to make sure that everyone on island (Local and military) going to make sure that care is adequately given to each individual? Another concern would be Guam's Power and Water Systems. Guam does not have the power system to support a population increase so drastic. Is the military going to help fund the building of more power and water systems as well? Also, the Guam Public School System is lacking teachers to teach in the classroom and/or the overcrowding with our public schools has already become a rising issue. My question is how is the military going to help assist in solving this problem? Lastly, if the military decides to seize private property for government use will the landowners be compensated or given another property located elsewhere?

#### I-537-001

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other federal programs and funding sources that could benefit the people of Guam.

#### I-537-002

Thank you for your comment. DoD, through its customer service agreement with Guam Power Authority (GPA), will be charged an appropriate power rate to reimburse GPA for the reconditioning of their existing combustion turbines as well as any increased in operational costs. The proposed reconditioning will be an adequate amount to provide the needed increased power for both DoD and induced civilian growth.

For wastewater, DoD has committed to arrange the funding to refurbish the North District Wastewater Treatment facility. Similar to power, the DoD will be charged user fees that will enable Guam Water Authority (GWA) to repay the funding provided for this refurbishment. For longer term upgrade to secondary treatment, DoD will pay their proportional share through user fees.

For potable water, DoD will upgrade their water system for their needs but will also accelerate the increased capacity and make excess water available to GWA.

The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide

this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will begin to drill new wells of their own and make improvements to their system to meet the long-term water needs of off-base communities.

In addition, DoD will assist as much as possible GWA efforts to secure grants and low cost loans to make upgrades to their system, many of which are required whether or not the DoD buildup occurs.

DoD recognizes that they cannot exceed the utility capacity on Guam and must make sure the utilities are adequate for all of Guam.

**I-537-003**

Thank you for your comment. The impacts on the Guam public school system are discussed in subsection 4.4.2, page 4-42 of the Socioeconomic Impact Assessment Study (SIAS). Table 4.4-4 in the SIAS provides the potential increase (maximal) of student population in the Guam Public School System from 2010 to 2020. Providing a brief summary, at the peak population year (2014), a total of 7,937 students could attend the public school system; by 2017, when the operational (long-term) conditions occur, the students generated could be 909. This is based on the direct and indirect (induced) populations resulting from the military relocation. The military dependents would be educated in the DoD school system and should not affect the public school system. Money generated through taxes from the increased population and federal payments to schools (based on student populations) should provide revenue to fund resources for the public schools.

**I-537-004**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive one with both historical and

contemporary contexts. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

DoD is confident that all parties can reach agreement on any potential land acquisition. Further, any proposed major DoD land acquisition, such as those associated with the preferred alternatives for the main cantonment and live fire ranges, must be approved by the Congressional defense committees.

Specific areas being considered for acquisition are identified in the Final EIS.

I-538-001

Volume 2 Chapter 16 Page 16-87, "Increase in Overall Crime" section pertains to the military operational unit and the impact in overall crime. It states that there is limited evidence to base conclusions on such as the lack of information on overseas Status of Forces Agreement, specific data of military crimes from the Guam Police Department, and lack of information of the DoD and Marine Corps websites. There are other viable sources that should be considered such as the Okinawa Prefectural Government, Department of Planning, Statistics Division-Okinawan American and Japan Self-Defence Force bases statistics, March 2007 ([http://nihon.awardspace.com/okinawa\\_sofa\\_crime.html](http://nihon.awardspace.com/okinawa_sofa_crime.html) and <http://www3.pref.okinawa.jp/site/view/contview.jsp?cateid=14&id=666&page=1>) and numerous news articles reported in Japan about rapes and other crimes.

I-538-001

Thank you for your comment. Additional information on crime, as available, has been added to the FEIS.

I-539-001

Firstly, this document is severely confusing and does not go into great details as to how preventative measures will be executed to ensure the people of Guam that this movement of troops to Guam will have a limited negative impact on their lives.

Secondly, I do believe that the military should seriously consider using some of the suggestions tendered by the local population, as they will be the ones living with the long-term consequences of the build-up.

### I-539-001

7 fighting for your beliefs, welcome to my home.  
8 I will hold firmly all my respects to you as I  
9 expect your respects to be held towards my  
10 family and my home.

11 To the President of the United States,  
12 the US Congress, House of Representatives,  
13 House of Senate and all others who should be  
14 greatly concerned about the military buildup  
15 and are blindly or selfishly making decisions  
16 in my homeland without my people's consent, we  
17 demand you hear us now.

18 I am an army veteran who served in  
19 Korea, and I understand the feeling of why do  
20 they oppose my intent to contribute to a  
21 development towards the great American dream?  
22 As one who serves their country, there is great  
23 pride and purpose because you are on the  
24 frontline of working for everything you believe  
25 to be true. My purpose for now is to fight for

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

Tel.(671)688-DEPO \* Fax(671)472-3094

1 the future liberties of my children and my  
 2 grandchildren. No matter how proud you are  
 3 about your beliefs, never neglect the existence  
 4 of other beliefs. That being said, I'm sure  
 5 you can identify people who you personally  
 6 know, who don't view their American dream the  
 7 same way you do.

8 In every community including the  
 9 extremely disciplined militaries, there are  
 10 those who choose to act in ways that disgrace  
 11 all who strive to protect their beliefs. They  
 12 stain your reputation and contribute to the  
 13 pain my people have experienced from the  
 14 negligent master government. Many of our  
 15 issues and concerns have been at your doorstep  
 16 for quite some time now and remain there as you  
 17 tell us that there is a possibility of land  
 18 condemnation from our children's future for  
 19 your bigger picture.

20 The next significant event after this  
 21 buildup is the death of, in my eyes, the  
 22 world's most beautiful culture because of  
 23 ignorance and lack of respect to indigenous  
 24 rights. Our culture is very generous, until  
 25 there is a perception of disrespect. Our

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-541-002

I-541-002

1 culture includes welcoming our visitors and  
 2 being respectably hospitable as most other  
 3 cultures to include some sub-communities in  
 4 your multi-culturistic environment. But beware  
 5 as it is in our natural instinct that when  
 6 there is disrespect we will work as hard as we  
 7 need to, to have justice. Like you, fight for  
 8 our freedoms for all whom we love.

I-541-003

9 I would like to think that my people  
 10 agree with me when I say that any other race  
 11 who lives with the respect of our culture can  
 12 call Guam home and me a brother at arms.  
 13 That's the reason why our brothers and sisters  
 14 are out there fighting right now while you're  
 15 paying attention to me. We are loyal friends  
 16 of yours who have lived, fought and died by  
 17 your side and for your causes. We live  
 18 together as it stands and now must work  
 19 together for the best interest of both our  
 20 beliefs. I ask you kindly to think of our  
 21 loved ones as you think of yours and what they  
 22 stand for and fight as brothers at arms.

I-541-004

23 For the sake of our children's chance  
 24 to live the Guahan culture that we love so  
 25 much, please take no action towards your

**I-541-003**

Thank you for your comment.

**I-541-004**

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

1 current plans and self interest. We deserve to  
2 work with you as equals in this decision, no  
3 matter what mitigation's taken in respects to  
4 your current plan, all of Guam and its heritage  
5 will collapse with the drastic change that  
6 you're working towards. Our decision makers  
7 are still learning how to make good choices,  
8 our administrators are still learning how to  
9 manage, our teachers are still learning how to  
10 approach our children. Our emergency resources  
11 are nearly always under staff and unequipped  
12 while ecological health is already  
13 deteriorating with its current population.

14 This is just a touch of the surface of  
15 our problems, which by the way most likely  
16 would be less intense if our voices had been  
17 heard prior. I believe that the best way for  
18 our both our futures is to associate freely as  
19 politically equal nations, so that we may be  
20 afforded a voice not limited to US  
21 opportunities but also open to international  
22 options as well. We need our own people to  
23 make the decisions for our home rather than  
24 people living almost halfway across the world  
25 and have many bigger issues of their own. If

1                   **COMMENTS BY MR. MIKE GAWEL**

2

3                   MR. GAWEL: Thank you. Good evening.

4 I'm a long term resident of Dededo, Mike Gawel,

5 as Cliff said. And in reviewing the Draft EIS

6 I've look at certain issues that I would like

7 to speak to you tonight. I think everyone

8 should be really concerned about the increases

9 in traffic that are projected with this. It's

10 going to affect all of us. We should be

11 concerned about the noise increases that are

12 going to really bother us, it'll create a lot

13 of -- because of the firing ranges, the

14 training with the aircraft, including

15 helicopters, it's going to really disturb our

16 quiet communities that we are enjoying now. I

17 think -- we'll suffer a lot of stress and

18 discomfort from these types of issues.

19                   But, in the short time I've got, I'd

20 like to concentrate on something else, an issue

21 isn't directly impacting you and me and the

22 residents here in Guam, but in the long-term it

23 will have a serious impact on Guam's

24 environment. And beyond Guam even to the whole

25 pacific marine ecosystems of our area. I've

**DEPO RESOURCES**

George B. Castro

**Court Reporter**

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-542-001**

Thank you for your comment. Overall traffic congestion and resulting travel times will increase as organic (non-military) population increases on Guam. The increase in population associated with the military build-up will also add traffic and increase congestion. The Draft EIS identifies a number of roadway improvement projects for the 2030 planning horizon, that if implemented, will offset the increased congestion attributable to the military at many locations.

**I-542-002**

Thank you for your comment. Noise levels may be significantly increased in some localized areas as described in the EIS. Mitigation measures have been proposed in the EIS to reduce noise impacts.

I-542-001

I-542-002

I-542-003

1 been studying coral reefs and marine life in  
 2 Guam and the neighboring islands for the last  
 3 36 years. And I need to say something  
 4 concerning the dredging that's going to be done  
 5 in Apra Harbor and its impact on the marine  
 6 life.

7 In preparing for the berthing  
 8 facilities for the aircraft carrier, as  
 9 proposed in the DEIS including the channels to  
 10 bring in these aircraft carriers, there's going  
 11 to be an enormous amount of dredging done. And  
 12 actually, during the preparation of the Draft  
 13 EIS, a lot of human resources and much funding  
 14 has gone into studies in Apra Harbor to assess  
 15 what will the impacts be and what will be the  
 16 expected losses of our marine resources and the  
 17 values of these resources? Even to a limited  
 18 extent, the University of Guam experts have  
 19 been hired to work on this assessment. And a  
 20 proposed system or a method of assessing the  
 21 losses called Habitat Equivalency Assessment.  
 22 It's a scientific approach, it's a good one  
 23 that's being used through the Draft EIS.

24 I'd like to point out that there's some  
 25 basic false in the way these studies are being

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-542-003**

Thank you for your comment. Habitat assessment methodologies that evaluate the function of affected aquatic resources, such as coral reef ecosystems, are an evolving science and the adequacies of existing and new methodologies are heavily debated in the scientific community. Ideally, a standard assessment technique that accurately characterizes and quantifies losses and gains of coral reef ecosystem functions would be used. However, rulemaking for the Compensatory Mitigation Rule recognizes the wide variety of aquatic resources present in the United States and the evolving nature of science regarding aquatic ecosystem restoration make the establishment of standard assessment methodologies impracticable. The assessment for this EIS used an historically approved methodology (percent coral cover), supplemented by other methods such as the use of Light Detection and Ranging (LIDAR) satellite photos, for quantifying impacts to affected coral reef ecosystems impacted by the proposed transient CVN wharf and associated dredging. DoD believes that use of the percent coral cover methodology, supplemented by use of LIDAR satellite photos, is the "best currently available science" to attempt to capture the thousands of elements that comprise the function of a coral reef ecosystem. DoD's assessment is currently under review by the US Army Corps of Engineers, the agency charged with implementing dredge and fill permits under CWA Section 404, and other Federal agencies. The FEIS will be updated to reflect the latest developments in this review.

I-542-003

1 done and the approach that's presented in the  
2 Draft EIS concerning this dredging. The losses  
3 of the values of all of the impact at coral  
4 reefs in the DEIS has been focusing on the  
5 measurement of the areas that are covered with  
6 live coral. Well, this is good but the methods  
7 used are not really adequate and I can't  
8 explain it all in the short time we have now.  
9 But they're not as good as methods that we've  
10 used in the past. For example on the  
11 assessments using the same approaches to  
12 dredging at the Kilo Wharf in Apra Harbor. And  
13 one of the greatest problems I see with these  
14 assessments of the coral reefs in the Draft EIS  
15 is that the coral is assessed just in the top  
16 18 meters, the top 60 feet or so of the water.  
17 That's looked at fairly carefully but the  
18 dredging won't go deeper than that 18 meters or  
19 60 feet. But there are a lot of valuable live  
20 corals that are down deeper, below that 18  
21 meters. They're on the slopes. And when the  
22 dredging occurs, the silt and sediment and  
23 broken coral will fall down those slopes onto  
24 the deeper areas and resources down there. And  
25 I think these need to be assessed.

I-542-003

1           There are probably some unique fish  
2 there. I think most people here on Guam are  
3 fishermen and realize the bigger reef fish, the  
4 groupers and things could be down deeper. And  
5 the assessment being done in the Draft EIS  
6 hasn't touched on this. It hasn't looked at  
7 what is down there that definitely will be  
8 impacted.

9           I think -- I'd recommend that  
10 additional studies be done on these areas and  
11 it can be done if the EIS for the disposal of  
12 dredge material looked at 6,000 meter or 6,000  
13 foot depths off of Guam last year. I think, we  
14 can look at 60 to 80 feet deep here in our Apra  
15 Harbor. And -- okay. I think we will write up  
16 some things on this too. But again, I'd like  
17 to stress that there's some false in the  
18 approach that is being taken. Thank you.

1                   **COMMENTS BY MRS. GLORIA NELSON**

2

3                   MS. NELSON: Jan, thank you for the time

4 last night. Janet Aguon gave me to be the

5 first last night because I have about four

6 pages. For tonight it's going to be very

7 different. We have heard all kinds of issues

8 and every one of those issues are most

9 important for our survival, but the most

10 important one for our family is I would say, no

11 condemnation! We are not going to compromise

12 for the money. For those of you who want to

13 compromise for money that is your prerogative.

14                   Now, it's very interesting because

15 we're following three directions. Number one,

16 there are four different areas, four different

17 nights where the meetings are held. The

18 direction is three minutes, he owes me two

19 minutes. But I probably have less than three

20 now I hope so. Then the last one is when are

21 they going to return the ancestral unused lands

22 and why are they asking for more? I am sorry

23 but that dollar sign is not going to be

24 negotiated by our family. If you want to do

25 it, that's your business.

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-543-001**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-543-001**

1           Tonight is the last opportunity for us  
2 to express that freedom of expression.  
3 Although the quality of it and the unity we  
4 expect out of it is one half of a quarter. I'm  
5 approaching this very differently from the  
6 previous nights. And I will go into questions.  
7 I don't expect any answer from the buildup.  
8 But if you want to say yes or no that's your  
9 prerogative. We have heard all the issues and  
10 there will be more coming up. I don't have to  
11 keep repeating them or keep repeating what I've  
12 already stated at the Legislature and the  
13 meetings in the various areas that were  
14 designated. But tonight, it's different.

15           I stand before you this evening because  
16 I don't expect to be answered, but nevertheless  
17 I'm going to ask. I've never been one to guard  
18 my tongue when something that I believe will  
19 hurt me and my family, will manifest itself in  
20 such a way that all that is left in fighting  
21 are nothing but words. Most of us are in that  
22 category now, but let me tell you,  
23 congratulations youths. Congratulations, I  
24 am very proud of you. As a teacher it's very  
25 difficult to teach a crowd like this, but we're

Thank you for your comment.

I-543-002

1 not going to be flunkies as Chamorros.  
2           The first question, the study was  
3 released for public comments in November of  
4 last year, and now, it's the military's job to  
5 sell the people of Guam that we are generally  
6 in favor of the buildup. Well, it's pretty  
7 obvious, we are not, some are not. And so, the  
8 question must be asked, what are you going to  
9 do about it? The buildup in inevitable people,  
10 no matter, if the Legislature were to post a  
11 question for the 2010 election ballot, forget  
12 it. Do you support the military buildup, and  
13 are you for or against it? It seems too late.  
14           Here are other questions that I must  
15 ask. Before I do, I will venture to say that  
16 none of you sitting as the buildup panel -- are  
17 you a buildup panel? No, he's not. The  
18 Chamorros and the Guamanians on this island,  
19 some of us will never be one of the called,  
20 "sugar gold", it's very obvious people, it's  
21 very obvious.  
22           Here are my questions and I'll go fast.  
23 Don't come closer to me. Is General Bice,  
24 David Bice doing a good job in selling the DEIS  
25 to the people of Guam? I wonder if the

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-543-003

1 Department of Defense thinks so. Governor  
2 Camacho, formed his military task force to work  
3 with the Joint Guam Program Office but there  
4 was so much withholding of information from the  
5 Joint Program Office, that at one time the  
6 governor wrote to US, Secretary of Defense  
7 Robert Gates, asking that General Bice be  
8 removed and someone else who's more sensitive  
9 in understanding of Guam's issues, be  
10 appointed. That didn't happen. I wonder if  
11 the governor still feels this way.

12 Question, are the governor and the  
13 senators doing a good job in protecting the  
14 best interest of the people of Guam? Is the  
15 governor's military task force really helping  
16 the people of Guam on these issues? Concerns  
17 in the community have surfaced and refused to  
18 go away saying -- stay there (to Mr. Guzman) --  
19 the governor's task force is not transparent to  
20 the people of Guam. You have read the paper.

21 We were told that because of the  
22 anticipated number of people who will testify,  
23 will reach the hundreds, and it has, look at  
24 how many hundreds we have here. But we will  
25 only be given three minutes, you owe me two (to

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

I-543-004

1 Mr. Guzman).

2 So, I would still repeat, three minutes

3 to defend land condemnation and return the

4 unused lands to our ancestors and to their

5 descendants. We need more than three minutes

6 and four days. Three minutes is the magic --

7 almost -- then so be it. How will you compile

8 hundreds of three minute oral testimonies into

9 your final Draft EIS? Are you even taking

10 these testimonies? What a fool we are, it's

11 not going to happen people.

12 Here I -- and the hundreds who took

13 time from their routine lives to show up to

14 testify and vent, will the Department of

15 Defense host a town meeting in the future for

16 those of us who will be directly affected by

17 the military buildup? We cannot interact, we

18 cannot. They didn't give us the opportunity.

19 Don't get closer -- (to Mr. Guzman).

20 Sure you have hundreds who have shown

21 up, but can you honestly say that you can put a

22 name of the hundreds who have shared oral

23 testimonies plus the testimonies in writing?

24 This forum, people, is very impersonal, it is

25 very impersonal. Following orders of the

1 integrity is not worth \$5.00 and for that  
 2 matter it's not worth millions of dollars. If  
 3 the military coming in is going to bring us  
 4 money but it's not going to benefit our  
 5 children, then it's not worth it. It's not  
 6 worth it even if you can afford to send your  
 7 children to private schools, you're going to be  
 8 living in the projects with kids who are just  
 9 being managed in class. They won't be getting  
 10 any kind of education.

11 I'm telling you that the EIS, that I've  
 12 read a good portion of it, and it's really hard  
 13 to get through. It's quite of long document.  
 14 It does not provide for the children of Guam.  
 15 And I would just invite you to consider that  
 16 most things that are important, all things that  
 17 are important should not be for sale.

18 You know, I'm a small business owner  
 19 and I know the potential that this buildup has  
 20 for my small company. You know what? I should  
 21 not be the only person who says I don't care.  
 22 I don't care if I don't make a \$100,000.00 or a  
 23 \$1 million dollars next year. If it  
 24 compromises my daughter's future, then it  
 25 shouldn't happen.

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-544-002**

Thank you for your comment. The proposed actions are complex and have many components. In order to characterize the affected environment and potential impacts, sufficient detail needed to be included in the Draft EIS. The Draft EIS was broken down by Volumes for each major action, and the Executive Summary provides an overview of the proposed actions to facilitate readability. The Draft EIS was developed with the intent to balance readability with sufficient technical information.

I-544-003

1           So, my comment -- I think that the  
2 entire education portion of the EIS needs to be  
3 reworked, reconsidered. I think the  
4 educational expert should be brought in. And  
5 us as residents, we need to really think do we  
6 want to be sending our children to school next  
7 door to someone who's going to the projects,  
8 because those kids are not only, they're going  
9 to suffer, but then there's going to be this  
10 huge gap. And if you think there's a gap  
11 already, that gap is going to become even  
12 wider. You're going to have children who have  
13 no education versus children who are in private  
14 schools, who are getting a decent education and  
15 you're going to start feeling that tension.  
16 And if you think there's tension now, multiply  
17 it by a hundred. And again, I've worked in the  
18 projects and we don't want Guam to become the  
19 projects.

Thank you for your comment. The impacts on the Guam public school system are discussed in subsection 4.4.2, page 4-42 of the SIAS. Table 4.4-4 in the SIAS provides the potential increase (maximal) of student population in the Guam Public School System from 2010 to 2020. Providing a brief summary, at the peak population year (2014), a total of 7,937 students could attend the public school system; by 2017, when the operational (long-term) conditions occur, the students generated could be 909. This is based on the direct and indirect (induced) populations resulting from the military relocation. The military dependents would be educated in the DoD school system and should not affect the public school system. Money generated through taxes from the increased population and federal payments to schools (based on student populations) should provide revenue to fund resources for the public schools.

The SIAS and the DEIS are documents that have identified the probable impacts of the proposed action and alternatives based on the best available information. Existing data and information was gathered and supplemented with interviews with federal and Guam agencies. To provide the public and various governmental agencies with an opportunity to review and comment on the methodologies and assumptions used, the SIAS was included as Appendix F, Volume 9 of the DEIS. Comments provided on the DEIS will also be included to provide the decision-makers with the public views in support and/or opposition of the proposed action and alternatives.

1 then you subtract them and multiply them in  
2 Guam and what do you have? A foreseen problem  
3 that could have been taken care of prior.

4 So, let me see exactly what I'm going  
5 to give up. Land that will never get back to  
6 the people, and I own land in Yigo. I own land  
7 from the military, they took from me. Jobs,  
8 they are already taken and a dump just for  
9 their waste. And we already have a problem  
10 with the waste. We're going to try to give  
11 something that we can't correct ourselves. And  
12 isn't it just funny how Guam is the only  
13 territory that has a DoDEA. And the whole  
14 purpose for the school is to give military kids  
15 in a foreign, in a foreign country, an  
16 opportunity to get an American education. And  
17 as far as I'm concerned, aren't we an American  
18 territory? No. We are unincorporated  
19 territory.

20 They want to build another base. And  
21 another base means more land. Jeez, these  
22 people are stingy. Imagine, like they will  
23 give us -- it means less for the people, less.  
24 And imagine, Andersen and Naval base could have  
25 already been villages. And all they do is take

1 and take and never give back.  
2           So, you know what? Hell, no, if I'm  
3 going to become a minority in my homeland!  
4 This is not just going to affect me but the  
5 children and the generation after us. So  
6 parents, ask yourselves, is the money worth it?  
7 No, you're right. How about instead of a  
8 buildup, we create a resistance to beat the  
9 system?

1                   **COMMENTS BY MS. VERA DE ORO**

2  
3                   MS. DE ORO: No deal, no action. It's  
4 really hard to follow such a dynamic young  
5 person such the one that went before me and  
6 then the other women who worked in the  
7 projects. I work here in Guam. I educate  
8 dropouts. I am so proud to see Andrea's  
9 bringing out his kids to say build, rebuild  
10 JFK.

11                   I was looking for the information on  
12 schools and trying to ask people about the  
13 information on schools. I'm glad the person  
14 who spoke before me mentioned it. I, for the  
15 longest time have felt that DoDEA schools are  
16 segregated, it's a form a segregation. It's  
17 segregation mandated by the US Government. And  
18 because of that, our schools are suffering. We  
19 have overcrowded schools, and I am a parent  
20 with a child in high school public school and a  
21 private school middle school. I sent my  
22 daughter to a public school because I can't  
23 afford a private school. But I believe in the  
24 public school system. Most of the young  
25 students and the young people out there when we

**I-546-001**

Thank you for your comment. The Department of Defense Educational Activity (DODEA) does have schools on other bases in the U.S. in addition to Guam. The separate educational systems on Guam (public schools and DoD schools) were based on a determination in the early 1990s that the Guam public schools neither met the educational instruction goals or the physical facilities standards that DoD required. When Guam public schools meet DoD requirements, a re-evaluation can be undertaken to determine if DoD needs to maintain their own school system or if the Guam public schools can adequately meet DoD requirements.

I-546-001

I-546-001

1 are Guahan are products of our public school  
2 system. So, our public school system is  
3 working. We need to make it better. We need  
4 to say no more to this segregated school system  
5 that is DoDEA and is Guam Public School System.  
6 Our society is further being discriminated by  
7 separating our children from each other.

8 My husband talks about good times with  
9 his friends that he made in the military while  
10 they were classmates at GW. And he tells me  
11 about going on base and using the facilities on  
12 base and how much it encouraged him to be the  
13 person he is today. I went to a private high  
14 school here on Guam and it made me afraid. It  
15 made me afraid to take on the establishment.  
16 I'm very motivated by my daughter Moneka who is  
17 a graduate of GW High School. And I look at  
18 all the other people who are products of our  
19 school and say, "Wow, I wish I had that  
20 chance." And now I do.

21 I really say no to this buildup. I  
22 say, "No" because it is separating and creating  
23 a community that is not united. It is creating  
24 a community that is them versus us. It is  
25 creating a community of haves and haves not.

I-546-002

1 This buildup is negative all around. This  
 2 buildup is taking away land that will make the  
 3 military own 40% of our land. Would Hawaii do  
 4 that? Would California citizens say yes to the  
 5 military coming and say, "Yeah, go on and take  
 6 40%." Okay. You know, the world is -- all the  
 7 countries in the world are looking at how do we  
 8 make and challenge climate change. Most of the  
 9 nations and countries are concerned about the  
 10 degradation of the environment worldwide. This  
 11 buildup is doing the opposite. If the United  
 12 States wants to improve its image to the world,  
 13 let it start by promoting a peaceful and  
 14 greener earth. Thank you.

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-546-003**

Thank you for your comment.

1                   COMMENTS BY MR. ART DE ORO

2  
3           MR. DE ORO:     First, I'd like to  
4 recognize John F. Kennedy High School, they  
5 need a new home.   Great bunch of teachers,  
6 great bunch of students, and they deserve as  
7 facility like this.   Let's do everything that  
8 we can to help them out.

I-547-001

9           My name is Art De Oro and I too am  
10 opposed to the military buildup.   I choose no  
11 action on the relocation of the Marines to  
12 Guam.   You know, there was a time when I stood  
13 in defense of this flag and I honored it with  
14 all my heart.   And I when I heard their words,  
15 "Yankee, go home," that offended me, because  
16 how dare they say that to me, I'm a proud  
17 American.   You know, there's one voice here on  
18 Guam that's saying that, and that's Howard  
19 Hemsing, Maga Aniti.   Every time you hear him  
20 talk, he says, "Yankee, go home," and we all  
21 just sit back and we just stay silent.

22           However, now, in today's newspaper, I  
23 found out Howard is not alone, the Japanese  
24 government supports Howard.       And the  
25 handwriting is on the wall for the United

1 States. Their biggest ally in Asia, Japan, not  
2 only wants Marines off Okinawa, they want all  
3 US troops off Okinawa completely. And some in  
4 the new Japanese government want them  
5 completely out of Japan. You know what that  
6 could mean for us? You know that number 8,000,  
7 and 30,000, and 79,000, we need to put up a big  
8 ticker that shows that number going up because  
9 if that happens, guess where they're going to  
10 go? Not 79,000, not 8,000, let's add more to  
11 that and we can't even keep track.

12 Secretary of State Hilary Clinton is in  
13 Hawaii to have talks with their Japanese  
14 counterpart on keeping the Potemkin Air Base in  
15 Okinawa. She's on her fourth trip to Asia in  
16 one year since becoming Secretary of States  
17 because she says this, that "we intend to  
18 exercise influence in Asia for another century  
19 and serve as a stabilizing force against  
20 China's rising power." And while Clinton  
21 continues to rack up Frequent Flyer miles, the  
22 United States continues to lose its foothold in  
23 Asia.

24 It now seems that it may be a good  
25 thing for the Japanese to renege on Potemkin

I-547-001

1 because in October, Secretary of Defense Robert  
 2 Gates said, "Our view is clear. The Potenma  
 3 relocation facility is a lynch pin of a  
 4 realignment road map. Without Potenma there  
 5 will be no relocation to Guam." So, that's  
 6 good news for us. And without relocation to  
 7 Guam there will be no consolidation of forces  
 8 and return of land in Okinawa.

9 You know, I have a lot more to say  
 10 about that but I want to tell you what's in my  
 11 heart. You know, I feel as strongly as you and  
 12 I felt that I didn't have a voice. But when I  
 13 heard We Are Guahan and my daughter, and they  
 14 stood up and they said, "We want to say, no."  
 15 I know all of you are silent and you want to  
 16 say, no. Let's stand together, call your  
 17 sisters and brothers. There are people out in  
 18 the world that want to help us. We need to let  
 19 them know and we're all doing it in silence.

I-547-002

20 We can stand up to this government. In  
 21 1776, that was their year, this is 2010, this  
 22 is our year! Stand up! Stand up! Be strong,  
 23 do not be afraid. This is our land. Don't let  
 24 them take it away.

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

1                   **COMMENTS BY MR. AGUARIN IRIARTE**

2

3                   MS. AGUARIN:    Hafa adai everyone, my  
4 name is Aguarin Iriarte and I go to school here  
5 at Okkodo.    You know, initially, I was -- and  
6 excuse me if I'm using my phone to read, it's  
7 the 21<sup>st</sup> century after all.    Initially, I was  
8 quite hesitant to come up and speak because I  
9 was so nervous but I realized the importance of  
10 voicing my opinion.    And then if you look at  
11 the back of the room and how many posters and  
12 how each of it says what's going to change our  
13 island, it's very overwhelming especially if  
14 this was your first time coming to one of these  
15 military buildup hearings.    This is why I  
16 encourage all of you here if you're still  
17 indecisive about coming up and speaking, to  
18 come up and speak because this is very  
19 important, especially, the youth of this island  
20 because we are the future of this island and we  
21 need to protect it for future generations.

22                   Back to the EIS.    I firmly oppose the  
23 buildup for many reasons, one being the issue  
24 of land condemnation.    Many people have brought  
25 this subject up before about the Pagat area

**DEPO RESOURCES**

Thank you for your comment.    Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.    Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions.    Eminent domain requires reimbursement at fair market value.

It is the intent of DoD to maintain public access to the cultural and historic sites at Pagat and Marbo consistent with safety and operational requirements.    Restricting access to certain DoD areas at certain times is required to maintain public safety.    Final plans concerning access to sites potentially impacted by the proposed action have not been developed.    DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites

I-548-001

I-548-001

I-548-002

1 being taken and being slated for use as a  
 2 firing range. And I find it very, very  
 3 insulting that the Pagat area is being looked  
 4 at as a firing range. And I'm appalled that  
 5 the US Government's ignorance at regarding our  
 6 people's culture and -- excuse me, I'm a little  
 7 nervous. I'm just -- this is so important for  
 8 us and the US government is perfectly fine with  
 9 putting a firing range on our ancient Chamorro  
 10 burial grounds. But I bet if they were US war  
 11 veterans or mainlander citizens that were  
 12 buried in that area, they wouldn't even dare go  
 13 and desecrate their grave, but when it comes to  
 14 us here on Guam they have a total double  
 15 standard and it's very, very insulting. The  
 16 Pagat area is home to many ancestral spirits  
 17 and it is basically a slap in the face if they  
 18 were to come in and put a firing range there.

I-548-003

19 Now that I presented the problem -- and  
 20 I want to give a solution because I believe  
 21 that we all need to work together and because  
 22 fighting is not going to resolve anything, so,  
 23 the US should use the land that you have  
 24 already taken from my people. As I drive  
 25 around the island, I see many already condemned

**DEPO RESOURCES**  
 George B. Castro  
**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-548-002**

Thank you for your comment. DoD understands the importance of the cultural and historic issues related with land in Guam, and in particular those associated with the Pagat site. The DEIS describes the intensive selection process that the DoD went through to select alternatives for the location of the firing range on Guam in Section 2.3.1. Discussion on the screening process associated with the firing ranges has been clarified in the FEIS. No direct disturbance to the Pagat site would occur from the construction or operation of the proposed firing range. However, DoD acknowledges that maintaining access to these sites is important. Although plans concerning access have not been developed, it is the intent of DoD to continue access should these properties be acquired. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites. A preservation plan would be generated for Pagat to protect this resource in the future.

**I-548-003**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-548-003

1 lands sitting idly there that isn't being used  
2 and I don't understand how you still want more.  
3 You already own more than 25% of the island and  
4 on a 232 mile square island, that is not a lot.  
5 And it show just how greedy the military is.  
6 And I know that people have said this before  
7 but if the military comes knocking on your door  
8 asking to buy or purchase your land, you tell  
9 them, no, because it's so important because our  
10 land is tied into who we are as a people and  
11 once we give up our land -- again, that's all I  
12 have to say and I encourage all of you to come  
13 up and speak because our island deserve so much  
14 more because -- thank you and Si Yu'us ma'ase.

COMMENTS BY MR. STEVEN LAFEVER

MR. LAFEVER: Hello everyone. Monica gave me her slot, so that I could speak, so, and thank you and I'll keep this short. Hafa adai and buenas to my people of Guam and to everyone else. My name is Steven Lafever from Nimitz Hill. I here to speak upon what the military is trying to advocate on our home, the Draft Environmental Impact Statement. However way they word it, whatever kind of euphemisms they express, the DEIS basically means that they are trying to bring in thousands of troops and their families in order to create a stronger military strategic point. What they haven't put into consideration or actually what they don't really care about is that in this action of theirs, they will slowly take away the values of our cultural lifestyle in order to gain in on whatever classified endeavors they have going on.

Now, I ask of the US military officers, wherever you guys are, what more war do you want to create? Because I feel that the outcome of this DEIS business will only produce

**I-549-001**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-549-002**

Thank you for your comment.

I-549-002

1 a bigger war on earth, and in addition, they've  
2 already begun to create a war on the island, a  
3 civil war between the indifferences of us  
4 Guamanians and the soldiers that are forced to  
5 station here due to the power of the military.  
6 Do they see the anger that is already being  
7 created? Did they think this type of theory is  
8 only going to subside as this propaganda  
9 continues to be forced? May they find the  
10 heart to do the right thing for us, for them,  
11 and for the world. Si Yu'us ma'ase and God  
12 bless.

1                   COMMENTS BY MS. JOSEPHINE JACKSON

2

3                   MS. JACKSON:    Buenas and hafa adai.  
4 [speaks in the Chamorro language; it is indeed  
5 a beautiful evening, Elders, with respect, and  
6 Chief of Staff, thank you for coming out  
7 regarding the military buildup.  Yes, I am one  
8 who said last night that I will defend our  
9 land, the island of Guam.  I will defend the  
10 air, the water, and our land because it is  
11 getting bad, bad things are showing up, bad  
12 things are showing up.

I-550-001

13                   My nephew and my niece are already  
14 getting older here on our island, and here we  
15 also have our neighbors Gloria and Ted.  This  
16 is all I will say, NO! NO! NO!  Do not sell  
17 your land, do not accept the money!  No!  
18 Because do you know what will happen if you  
19 accept the money?  You will kill your children,  
20 because they will not have land.  Believe me,  
21 because our children are our future, our next  
22 generation and their generation.  Our land is  
23 already getting bad, signs are showing already.  
24 They want to suck out the water, there will be  
25 no water for our families.  They will also suck

I-550-002 | 1 the electricity, we will have power sharing  
I-550-003 | 2 again. The sewers will also become full and  
3 blow up, Boom! Boom! Boom! Boom, there goes the  
4 sewer again. The roads will smell, the air  
5 will smell, this will be a bad situation. Look  
I-550-004 | 6 down there again at Kilo Warf, they want to  
7 extend it to bring in nuclear submarines, my  
8 God! The biggest US nuclear submarine to be  
9 based here on this small island. The US  
10 military nuclear submarine. My gosh, the  
11 children out there are suffering already, the  
12 children are heartbroken, the only thing they  
13 are thinking about are "chi ching" that is all  
14 they are thinking about, the money. Don't you  
15 know what that means G-U-A-M? Think about it,  
16 and I will tell you the reason why we want to  
17 change G-U-A-M to Guahan. Do you know what G-  
18 U-A-M means? I'll tell you "Give Us American  
19 Money." Hell no! Hell No! Deal? No Deal!  
I-550-005 | 20 Kilo Warf, they want to expose us to

### I-550-002

Thank you for your comment. With the reconditioning of existing Guam Power Authority generating systems and upgrades to transmission and distribution systems, adequate power is projected for all of Guam. These system improvements would increase reliability for all of Guam. DoD proposes to arrange financing for these improvements and would pay for them through the customer service agreement and utility rates.

### I-550-003

Thank you for your comment. DoD is committed to ensuring that the utilities are appropriately upgraded as needed for the increased DoD personnel and induced civilian growth. Roads will also be upgraded to meet increased usage. DoD feels that these areas have been studied in depth and the proposed upgrades would accommodate the increased population provided Gov Guam utility entities do their part as well. DoD would assist the Gov Guam utility entities to improve their systems as much as legally possible.

### I-550-004

Thank you for your comment.

### I-550-005

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, etc. In fact, when feasible, the DoD is attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances.

When using hazardous substances, environmental laws and regulations

I-550-006

1 they now? They are not around are they? But  
 2 when it comes to the fishing rights of the  
 3 Chamorros, oh boy do they talk out loud, do  
 4 they talk out loud, but when it comes to the  
 5 environmental of the impact of that nuclear  
 6 submarine, everything is quiet as of now.  
 7 That's how quiet these people are.

8 So, let's get out people, wake up  
 9 [speaks in the Chamorro language; wake up. You  
 10 know, the saying, wake up and smell the coffee?  
 11 [speaks in the Chamorro language; no] wake up  
 12 and smell the air of Guam, because it's getting  
 13 contaminated by this military build-up.  
 14 [speaks in the Chamorro language; God bless  
 15 you]. You know what? Say no, no, no, enough  
 16 is enough is enough. God bless you.

(e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs), standard operating procedures (SOPs), and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs, SOPs, and other controls are fully described in the EIS document. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered. These actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment (including Kilo Warf) from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

**I-550-006**

Thank you for your comment.

1                   **COMMENTS BY MR. JAMES WHIPPY**

2  
3           MR. WHIPPY:   You can fool some people  
4 sometimes but not all the people all the time.  
5 [speak in the Chamorro language; good evening,  
6 I am James Whippy from Chalan Pago].   I am a  
7 graduate student in the Micronesian Studies  
8 Program of the Micronesian Area Research Center  
9 of the University of Guam and contract  
10 archeologist.   I consider myself a Guahan boy  
11 even though I am in no way Chamorro.   I am a  
12 proud indigenous Fijian islander who was born  
13 in Papua New Guinea and called Guahan my home  
14 since my family moved here when I was 5 in '88.  
15 I am a product of the Guam Public School  
16 System.

I-551-003

17           Guahan will never be the same following  
18 this buildup and history has shown that the US  
19 military does what it wants.   What is going on  
20 here is an attempt to sugarcoat and downplay  
21 what is going to happen during this  
22 reorientation of US military forces in the Asia  
23 Pacific Region to Guahan.   In doing so, they  
24 hoped to achieve the least resistance possible  
25 during this relocation because once it has been

I-551-001

1 completed there has no go going back.

2           The militarization of Guahan is going  
3 to occur whether we like it or not, nothing we  
4 say here is going to totally prevent this from  
5 happening. As a contract archeologist with  
6 military contracts, I am literally in the  
7 trenches of this buildup. Do they currently  
8 have an up-to-date cultural resource survey  
9 done for proposed lands to be taken from local  
10 landowners? I will answer this with another  
11 question. Did the US military recently  
12 contract any archeologist to survey Farallon de  
13 Medinilla in the CNMI before performing live  
14 fire and laser training today as I speak? No.  
15 The legislation currently in place and enforced  
16 by the historic preservation office allows  
17 developers to dig up and remove the bones of  
18 the pre-latte and latte period Chamorros. Ask  
19 any of this mili-taki around where the  
20 desecrated burial remains of the ancients go  
21 following archeological excavations on  
22 construction sites. After that, if you really  
23 want to know, ask me when I'm done here.

24           Because of the US military presence on  
25 island, we cannot simply stage a Coup D'etat

Tel.(671)688-DEPO \* Fax(671)472-3094

**I-551-001**

Thank you for your comment. The DoD conducted historic property surveys of over 5,000 acres of areas of land that were considered under the alternatives in this EIS. This included non-DoD lands where access was permitted. If these lands are developed as part of the Marine Relocation, then all unsurveyed areas would be surveyed prior to construction. As part of the planning process, the areas that contained the highest densities of historic properties were avoided. No known burial sites will be impacted by the project.

1 like our brethren in my homeland of Fiji and  
 2 change the system to our liking, to attempt so  
 3 would be suicide. Our only non-violent option  
 4 is to work within the confines of their western  
 5 laws and regulations to achieve our goals.  
 6 When this fails, we shall see who is willing to  
 7 stand beside me in a caribou and bull cart  
 8 roadblock in front of military installations  
 9 asking rhetorically for identification.

I-551-002

10 As -- now, I will speak on eminent  
 11 domain invasion regulatory taking and  
 12 subsequently inverse condemnation. As an  
 13 unincorporated US territory, we are second  
 14 class citizens not fully covered under the  
 15 complete protection of the US constitution.  
 16 That is a fact.

17 However, we are granted the right's  
 18 guaranteed by the 5<sup>th</sup> amendment if you want to  
 19 put it that way. The takings clause of the 5<sup>th</sup>  
 20 amendment allows the US to take away any  
 21 privately owned lands through eminent domain  
 22 provided just compensation to the landowner.  
 23 Who defines just computation, just  
 24 compensation? Neither you nor I. Even if you  
 25 do not accept this set of property, they are,

**DEPO RESOURCES**

**Court Reporter**  
 Tel.(671)688-DEPO \* Fax(671)472-3094

**I-551-002**

Thank you for your comment. Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value.

Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-551-003**

Thank you for your comment.

I-551-002

1 under US law, legally allowed to do so.  
 2 Landowners, keep in mind, inverse condemnation  
 3 proceedings may be initiated if as a result of  
 4 eminent domain regulatory taking and its  
 5 subsequent regulations placed on surrounding  
 6 lands, you are denied economically viable use  
 7 of your land. Even if it is a result of noise  
 8 from over flying aircrafts, you must be  
 9 compensated as well. What is the good of a  
 10 good education with no direction like the right  
 11 to vote with no one to vote for in an election?  
 12 Saina Ma'ase.

COMMENTS BY MR. TOM BARCINAS

1  
2  
3 MR. BARCINAS: My name is Tom Barcinas.  
4 I'm simply a fellow from Santa Rita, not  
5 representing a group. America needs Guam.  
6 Guam needs America. This, I'm sure we'll all  
7 agree. The following statements are made to  
8 indicate areas of concerns to address the goal  
9 to find ways to coexist and have a win-win  
10 situation and live harmoniously in our very  
11 small island, only 4 to 8 miles wide and 30  
12 miles long.

I-552-001

13 While flying out of Guam I can see both  
14 sides of the island. When flying from Houston  
15 to DC, on December 1, I was struck by the  
16 difference and started to think how Guam can  
17 accommodate the needs of the military and still  
18 be able to coexist and live harmoniously. The  
19 Federal Government already owns about one third  
20 of the island with requirements for more land  
21 space for road construction, firing range in  
22 the north and a trail run to Mount Lamlam in  
23 the south and for other purposes. It is sad to  
24 think that the people of Guam will be in  
25 minority in their land ownership. With the

I-552-002

DEPO RESOURCES

**I-552-001**

Thank you for your comment.

**I-552-002**

Thank you for your comment. Our acreage estimates indicate that non-federally controlled lands would continue to be greater than the federally-controlled lands. An estimated 2 percent increase in federally-controlled land is proposed. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

I-552-003

1 anticipated drastic increase in population, it  
2 is also very sad to think that in time, the  
3 Chamorros as a people will also be a minority.  
4 I hope that the day will never come when the  
5 Chamorros will lose their identity.

I-552-004

6 In the interest of time and so others  
7 will have the opportunity to share their views,  
8 let me just give a summary of how the buildup  
9 will impact the island and the people of Guam  
10 and how we can live, have a win-win situation  
11 and live harmoniously. Just briefly, the  
12 impact will definitely compromise Guam's  
13 culture, values, custom, and even the language.

I-552-005

14 This is indeed a very high price to pay. You  
15 may not realize it right now, but I am a  
16 product who paid that price for what happened  
17 throughout history on Guam. Chamorros are once  
18 again called upon to endure the burden of  
19 patriotism and loyalty to America. Since most  
20 of the funds for the buildup will be spent on  
21 base, how about the Federal Government doing  
22 the following: One, on healthcare, all buildup-  
23 related personnel should utilize the Naval  
24 hospital since the Guam Memorial Hospital  
25 cannot accommodate the anticipated population.

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

**I-552-003**

Thank you for your comment. The population estimates in the Draft EIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The EIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Final EIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40% of Guam's population in the 2000 U.S. Census. Chamorro concerns involving political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control.

More information on this topic can be found in the Environmental Justice and the Protection of Children chapters of the Final EIS, specifically, Chapters 19 in Volumes 2, 3, 4, 5, and Chapter 20 in Volume 6, and under cumulative impacts (Chapter 4) of Volume 7.

**I-552-004**

Thank you for your comment. Through the process of public involvement that has accompanied this proposed action (see Final EIS, Volumes 1 & 10), the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten or significantly marginalized by western culture. While population increases can highlight cultural

13 power, water, sewer, road, public safety,  
14 health and social services. All military  
15 personnel who are declared as sex offenders  
16 will not be allowed to reside on civilian  
17 properties.

I-552-009

18 Sometime ago we see in the newspaper  
19 that somebody don't want somebody that  
20 personnel who was, you know, declared that to  
21 live on base will question why, out here?

22 Toxic contamination around Guam, clean them all  
23 up as soon as possible. Ladies and gentlemen,  
24 if you haven't seen this, this represents, this  
25 map shows the contamination around Guam. We

**DEPO RESOURCES**  
George B. Castro  
**Court Reporter**  
Tel.(671)688-DEPO \* Fax(671)472-3094

differences, they also present unique and new opportunities for cultural learning and sharing. As indicated in the Final EIS (Volume 2, Section 16.2.5; Volume 4, Section 16.2.5), the DoD plans for cultural sensitivity orientation and awareness programs which will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

**I-552-005**

Thank you for your comment. The Naval Hospital has been planned to support current and long-range military population projections and would provide health services to the military personnel, their dependents, and military beneficiaries. Under current conditions, and with few exceptions, the Naval Hospital cannot provide health care services to non-military personnel.

As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD's ability to fund actions is limited by Federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other Federal programs and funding sources that could benefit the people of Guam.

**I-552-006**

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with

I-552-009

1 like that all cleaned up and no more of that in  
 2 the future. No land excavation, dredging that  
 3 will alter the cultural or ecosystem of the  
 4 island. Persons affected by diseases related  
 5 to toxic chemicals from military intruders are  
 6 to be, are to receive financial assistance from  
 7 the Federal Government, as an example, the  
 8 Cocos Island situation. In conclusion, if both  
 9 sides could demonstrate efforts toward a win-  
 10 win situation, perhaps we can co-exist and live  
 11 harmoniously in our little but beautiful  
 12 island. Thank you.

a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community.

**I-552-007**

Thank you for your comment. Up to 22 new water supply wells are proposed to provide additional capacity for the DoD water system. These wells would be installed in Northern Guam and extract potable water from the northern Guam lens aquifer. Operations at Fena Reservoir would not be modified at this time. The estimated sustainable yield from the northern Guam lens aquifer is estimated at approximately 80 million gallons per day. Aquifer sustainable yield is the amount of water that can continuously be withdrawn from groundwater sources without degrading water quality or viable production water. The estimated total average daily water demand from this aquifer is 63 million gallons per day at the peak of construction of the proposed DoD buildup. Thus, there will be an adequate supply of potable water. DoD and Guam Waterworks Authority plan to jointly manage the production of water. Also DoD is an advocate for grants and low cost loans to Guam Waterworks Authority so they can improve their distribution system and reduce water loss due to leaks.

The Guam Water Authority (GWA) and DoD are cooperatively working together to plan for the expected increase in population on Guam. DoD has agreed to drill the 22 new DoD water supply wells early, and provide this water to GWA, along with excess water from DoD's Fena Reservoir, to meet the near-term increase in water demand that is expected to occur off-base during the construction phase of the buildup. During this time, GWA will make improvements to their system to meet the long-term water needs of off-base communities. The net positive affect of this strategy is that DOD shoulders the cost to supply early buildup water demand, especially the demand associated with the temporary construction workforce.

**I-552-008**

Thank you for your comment. Many of the issues you raised are not part of the proposed project and the EIS. Military that are convicted of sex offenses are discharged. You have the right to know what sex offenders are living in your community. Refer to the Guam Sex Offender Registry for additional information.

**I-552-009**

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. As with all industrial-type operations such as those being performed by the DoD, there are various chemicals (e.g., hazardous materials/wastes) that may be used. However, when feasible, the DoD is committed to reducing or eliminating the use of various hazardous materials/wastes to the greatest extent possible and substituting them for less toxic substances. Hazardous substances (e.g., hazardous materials/wastes) that may be used include: pesticides and herbicides; fuels, oils, and lubricants; solvents; explosives; cleaning agents; and corrosives. When using hazardous materials/wastes, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs and controls are fully described in the EIS. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels.

These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered. In fact, many such sites on Guam have been or are in the process of being cleaned up/remediated by DoD. These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, or other hazardous substances.

Attached are my personal comments on the DEIS/OEIS for the Guam and CNMI Military Relocation. Please advise me as to what specific changes you make in the DEIS as a result of my comments.

Sincerely,

DAVID T. LOTZ

**Dave Lotz JGPO Military Buildup DEIS Comments, February 1, 2010**

**Volume, Chapter-Page, Section: Discussion.**

- I-553-001** | ES-4, ES-3: These referenced agreements should be included in the Appendixes for reference to simply avoid the likely risk of bias summarization.
- I-553-002** | ES-6: Table ES-1 and the explanation of 75% off-island residents indicates a racial bias towards hiring practices in violation of the civil rights of the people of Guam.
- I-553-003** | ES-16, ES-5: Development of Future Training Ranges. This is a foreseeable project and is required to be included within this EIS. Otherwise the proponent is segmenting the development.
- ES-16, ES-5: With this discussion of limitations of training ranges, an alternative should be included of no training ranges on Guam and the CNMI with the Marines traveling elsewhere, as outlined, for this training.
- I-553-004** | ES-35: In Table ES-4, mitigation for noise should include additional alternatives to mitigation such as (1) limiting the days and hours such as not on Saturdays and Sunday and weekday only between 8 AM and 5 PM, (2) earth berms, (3) the development of alternative roads such as (a) through Andersen South as compared to Chalan Lajuana and (b) using interior roads in NCTS, and proper use of quiet vehicles, proper maintenance, and operation.
- ES-36: Regarding mitigation to cultural resources in Table ES-4, public education and a preservation plan is NOT acceptable mitigation to less than significant. What is the public education for, to tell the people that they cannot visit cultural sites or engage in traditional practices at traditional sites such as fishing. True mitigation should have the following: (1) developed by the Guam community, not DoD; (2) On-site management, improvements, and maintenance, and (3) a very specific program of public access.
- ES-36: In Table ES-4, a "suite of mitigation of measures... under consideration" is NOT acceptable for Socioeconomics and General Services. Mitigation should start with a legal commitment of DoD to preferential hiring residents of the Mariana Islands. Another mitigation is to spread out the time frame for construction to 12 years.
- I-553-005** | VI, 1-17, 1.4.1: There four points deal in generalities and lack specific details to justify a response to threats in the region. Without specific detailed justifications, for instance Develop Rapidly Deployable Capabilities, there is no basis to make the case for deploying a Marine Corps base on Guam.
- VI, 1-20 to 1-21, 1.4.2.2: The requirements of response time to a threat, in terms of maximum allowable hours and/or days, is not provided or adequately defined to justify not considering in the EIS Hawaii, Alaska, or California. In addition, the type(s) of forces is not described in relation to their ability to respond in hours/days. Further, there is no correlation between the type of forces(s) required to respond, perceived threats, and the types of units located on Guam. While Vol. 2, Ch2, lists the types of units for Guam, there is not discussion of their integration into response packages. A narrative of Marine

**I-553-001**

Thank you for your comment.

**I-553-002**

Thank you for your comment.

**I-553-003**

Thank you for your comment. The additional training ranges you refer to are reasonably foreseeable actions and are identified in Volume 7, Chapter 4, Cumulative Impacts. Many of these ranges are proposed for CNMI. Although initial notional plans have been developed to determine the maximum number of ranges that could be accommodated, there is insufficient detail on these projects to provide a detailed impact analysis. Additional NEPA environmental review documentation would be required for these future ranges.

**I-553-004**

Thank you for your comment. BMPs and mitigation measures proposed in the EIS have been updated in the FEIS based on comments received during the public comment period. Measures will continue to be updated as a result of agency consultation and construction permit application processes after the Final EIS is published. Mitigation measures committed to in the Record of Decision and attached as conditions to a permit will be implemented.

**I-553-005**

Thank you for your comment. The guidance of the IGBS and QDR discussed on page 1-17 are broad, but nevertheless are requirements that the proposed actions must meet. It is agreed that there can be various methods for meeting the IGBS and QDR. However, this guidance is but one part of the overall requirements relating to the purpose and need for the proposed actions. Section 1.4.2. provides

- I-553-005** | responses in the region should be included that could or could not make the case. While the Korean War and the war in Indochina may be cited, their illustrative use is risky as they were both unusual cases, which may not be present in today's world as the Asian Pacific Rim has changed vastly. The conclusion is that the DEIS is deficit in justifying why other U.S. locations are not subject to the DEIS. Further, of the four elements listed for Guam ((1) Command Element, Marine Expeditionary Force, (2) Ground Combat Element, (3) Air Combat Element, and (4) Logistics Combat Element, only 2 are combat elements, the GCE and ACE. Further there is no justification for the ACE on Guam when compared to Air Force and Navy carrier air combat units in the Western Pacific area. Regarding logistics, no alternate discussion of utilizing the existing pre-positioned ships is provided.
- V1, 1-21, 1.4.2.3: The statement is implied that only freedom of action can be made from bases in the U.S. The distinction needs to be made that Hawaii, Alaska, and California are States of the United States of America. Guam is not a State, the island is a territory as a result of the 1898 Treaty of Paris. All States chose to enter the Union. Guam was not afforded that provision. Furthermore, Article IX of the Treaty of Paris states the following: "The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress". This has not occurred. Therefore, the underlying assumption that DoD can use Guam for a base is an inheriting conflict with this provision of the Treaty of Paris since the native inhabitants of Guam have not made a political status decision and furthermore do not have a decisive role in the proposed action.
- Furthermore, as a recognized non-self-governing territory by the United Nations, under international law the military buildup of Guam can only occur when approved by a majority vote of the people of Guam.
- V1, 1-21, 1.4.2.3: This section attempts to portray that Asian countries do not want permanent U.S. bases. However, it lacks specific references and details for this justification. No statement is made regarding the staving of Marines on the four main islands of Japan.
- I-553-006** | V1, 1-30, 1.6: There is apparently a deliberately vague discussion of private sector involvement. This needs details as it is an attempt to permanently enrich the private section at the expense of the people of Guam.
- I-553-007** | V1, 2-17, 2.2.4.5: This makes the case for an alternative for all Marines on Guam to have their training elsewhere and therefore this needs to be an alternative.
- I-553-008** | V1, 2-32, 2.7.1.4: There needs to be a discussion of the impact of hauling the waste to Layon.
- I-553-009** | V2, 2-35, 2.7.1.6: What are the advantages, disadvantages and environmental impacts of this housing pattern?

details of the analysis relating to Guam being the proposed location for the relocation.

Regarding comments on Section 1.4.2.2., it is permissible under NEPA to use qualitative rather than quantitative criteria. In this case, as articulated, the desire was to place forces so that response times would be kept to a minimum to protect the Asia-Pacific region. Regardless of the types of units, the units would be transported by either air or sea. These methods were discussed. In either case, the response times still must be minimized, as discussed.

Other locations are discussed in Section 1.4, but as indicated, they do not meet the purpose and need for the proposed actions.

The portion of the comment regarding Section 1.4.2.3. relates to Guam's status. Topics such as the political status of Guam are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with longstanding federal-territorial status issues outside the scope of DOD legal authority. The various EIS public engagement forums provided an indirect avenue for informing some and reminding others in local and federal policy-making institutions of issues that are important to a significant segment of the Guam community.

The comment states that there should be specific citations and references to communications with various nation-states regarding the potential for placement of forces within their borders. Sufficient detail and specifics is provided to inform the reader regarding the constraints on the U.S. and the Department of Defense when evaluating potential locations for the relocation.

**I-553-006**

Thank you for your comment. The EIS discloses information on the

**I-553-010** | V2, 2-50, Table 2.3-2: There is no discussion and environmental review on where this training, especially the terrain flights, will occur and the routes between Andersen AFB and the landing zones. I recommend that the route between Andersen AFB and Andersen South be evaluated as a reasonable alternative over the ocean to avoid noise pollution to the numerous residences and the possibility of a crash. There has been a recent fatal crash of a helicopter while on a low level terrain flight at night.

V2, 2-51, 2.3.1.5: There is a discussion of a military flight corridor over southern Guam which, as a reasonably foreseeable action, is required to be in the EIS, which it is not, and the environmental impacts need to be stated.

**I-553-011** | V2, 3-33, 3.2.2.1 on: There is no discussion on the sources and volume for the limestone rock material necessary for this construction. Specifically, do the current quarries on Guam have adequate material or are additional quarries required and what is the environmental impact of the new quarries.

**I-553-012** | V2, 3-42 to 3-43, 3.2.2.4: The impact of training activities in the Naval Magazine is described as:

An increase in military training activities would result in localized disturbances to topographic features and soil. Training activities are conducted with established procedures aimed at minimizing topsoil loss, compaction, and erosion. Erosion potential for soil found at NMS can be found in Table 3.1-1. There would be minimal impact to soil and geological resources from training activities and short-term impacts on soil and geological resources during construction of munitions magazines. No significant impacts are expected.

No details of the training activities in these areas is provided. These soils are easily eroded even from just small groups of hikers over this type of topography. No details are provided to define “localized disturbances” and what “established procedures” are. Table 3.1-1 is labeled Soils Across Guam and only contains an “erodibility factor” and has no relationship to types of activity on the soils and thus cannot be used as guideline for concluding “minimal impact to soils...”

V2, 3-47, 3.2.3.5: The locations for the firing ranges are not flat.

**I-553-013** | V2, 4-99, 4.2.2.4: This section states:

*Operation*

This analysis assumes that proposed aviation training activity (flight operations) with the four new landing zones at NMS would have no effect on water resources. Consequently, no impact analysis of flight operations on water resources was conducted. Assumptions are clearly not acceptable. Will the constructed landing pads collect water and will the helicopter downdraft on the collected water create erosion?

This section further states:

proposed actions, alternatives and impacts associated with the proposed military relocation program. Similar to other military construction programs, there would be involvement of both the public and private sectors in implementation. The socio-economic sections of the EIS provide estimates of job opportunities and other economic data.

**I-553-007**

Thank you for your comment. As discussed in Section 1.4 and in Volume 3, Section 1.2.2., certain training, such as individual arms training, is required with such frequency that other training locations distant from the base are not practicable and do not meet the purpose and need. Volume 1, Section 1.4.2.5. and Volume 3, Section 1.2.2. explain why only the CNMI meets the purpose and need for certain training activities of 200-400 Marines.

Section 2.2.4.5. has been changed in the FEIS to accurately reflect that the action of the 2010 Quadrennial Defense Review is to evaluate all DoD training needs. The language is clarified to state that their focus is much broader than Marine Corps training as originally written.

Further, the Marine training discussed in this section are existing training activities that are occurring in other locations. If, as a result of the QDR effort, other training locations and opportunities are developed, those locations would be considered by the Marine Corps in accordance with NEPA. To include discussions regarding potential future alternative locations is speculative.

**I-553-008**

Thank you for your comment. The impacts of hauling waste to the Layon landfill are addressed in the Final Environmental Impact Statement for the Siting of a Municipal Solid Waste Landfill Facility, Guam dated July 2005.

**I-553-013** Proposed foot, wheeled, and tracked vehicle traffic near and through numerous surface water drainage feature crossings throughout the southern portion of NMS has the potential to result in localized, temporary impacts to surface water quality. To avoid excess sediment entering into stream channels, buffer zones would be established to prohibit training within 100 ft (30 m) of the stream channel except at designated crossings. Upon completion of transit through the stream crossing, any localized impacts to water quality would dissipate and revert to pre-disturbance conditions. There would be no anticipated long-term impairment to surface water drainage feature function due to the localized, temporary, and BMP-governed nature of operations in and around the surface water crossings.

This area is a watershed and a major source of drinking water for the island and erosion has already silted up Fena Reservoir even though no activities are allowed in the watershed. Vehicle and foot traffic will create permanent erosion channels and siltation to the Fena Reservoir. Provide a map of the buffer zones and streams. Further define streams to include intermittent runoff channels that carry significant volumes of water in heavy rainfall. By defining the streams accordingly and providing a map, the conclusion will be that only narrow isolated ridges will be available for this type of training which would then be not feasible to be utilized. Explain how “any localized impacts to water quality would dissipate and revert to pre-disturbance conditions” for continued repetitive activities. This is simply not possible. The BMP needs to be stated here so the reviewer can relate to the activity and resource. Otherwise this statement is meaningless and misleading.

**I-553-014** V2, 6-2: Figure 6.1-1 should include the types of military activities proposed. The only relevant activity is heavy trucks. How about aircraft noise and firing of guns?

V2, 6-33: Figure 6.2-3 regarding aviation noise and all other noise maps needs a clear distinction such as background color to distinguish the DOD lands from non-DoD lands. This figure does not indicate if it is current or proposed and the project footprint differs from the project footprints indicated in figure 6.2-4.

**I-553-015** V2, 6-36, 6.2.2.4: Are BMP going to be used to reduce the noise levels and what is the reduction specifically in noise levels? This should be stated as a mitigation measure. This should also be mapped to show the effect of mitigation.

V2, 6-52, 6.2.8: There are significant impacts of the live fire from the range onto nearby residences that have to be mitigated. In addition to the berms there should be a requirement to noise proof all nearby residences.

**I-553-016** V2, 8: There is no discussion of the changes in land use outside of DoD or proposed DoD acquired lands. They will be significant direct results of this proposed action on non-DoD lands. Reference the Dec. 28, 2009 PDN article on a \$200 million Harmon Annex housing for construction workers that specifically related to the military buildup.

**I-553-017** V2, 8-14: Table 8.1-1 has an incorrect application of the work “vacant” to current use. All these parcels have current uses by man and the ecosystem and should be stated. Using the word “vacant” implies there is absolutely nothing there and no one goes there. This is

### **I-553-009**

Thank you for your comment. The housing pattern depicted in the referenced figure is a notional layout. While the footprint would be the same should the proposed action be implemented, the exact layout or pattern has not been defined and would not be until during the design stage of the proposed project.

### **I-553-010**

Thank you for your comments. The text in Volume 2, Table 2.32 has been changed. Flights would follow random paths; military flight procedures and policy for overflight of populated areas would be followed including procedures for minimizing or avoiding flights over populated areas.

Since the flights along the southern part of Guam would be random, there would be no significant impacts to airspace management, or airspace use. Flights would follow Visual Flight Rules (VFR).

### **I-553-011**

Thank you for your comment.

Construction in Northern Guam would not require imported limestone. Fill at the construction sites will come from excavation at the same location, whenever possible. Guam's quarries will support what ever additional fill is required.

### **I-553-012**

Thank you for your comment.

Training activities are not detailed in individual resource chapters. For

**I-553-017** | incorrect and gives a false bias impression that this land is therefore available for use. An EIS needs to be written in unbiased objective language and is clearly not. All of the subsequent parcels in sections 8.1.2 such as Former PAA Parcel and GLUP 77 omit the cultural resources and recreational resources and uses of the property.

V2, 8-50, 8.1.5.2: Regarding the Non-DoD lands south and southeast of NMS that is within the Guam Territorial Seashore Park, the uses of this land is no described. There are significant cultural and recreational uses of this land.

**I-553-018** | V2, 9: While this is a reasonable attempt to portray recreation resources, there is no quantifying information on recreation use and therefore lacks the ability to evaluate the projects' impacts on recreation use. A comprehensive recreational carrying capacity analysis is listed as recommended mitigation when in fact this information is essential for an evaluation of the environmental impact. There is no discussion of the impact on non-DoD recreational facilities.

**I-553-019** | V2, 9-4, 9.1.2.4: A major attraction to hikers at Pagat is the features of the Chamorro village, an archaeological site listed on the National Register of Historic Places.

V2, 9-4, 9.1.2.4: More specific demographics need to be provided for all public sites that will be closed. The citation for Pagat of up to 60 is too low. On January 2, 2009, for example, there were over 100 hikers to Pagat.

V2, 9-7: Figure 9.1-4 does not include all the features of this area such as the cave and archaeological site at Pagat.

**I-553-020** | V2, 9-15, 9.2.1.1: Insufficient data collection in order for an objective analysis of the impact. Specific user data (collected over an entire year) and the carrying capacity study should be done prior to this DEIS. Otherwise it is deficit.

V2, 9-18, 9.2.2.1: There is no discussion of hiking and coastline recreation use of this parcel. The vague impacts of hiking access to be "likely inhibit access" and "use of the existing trail on-site would likely be lost" is just too vague. An objective statement should be stating the official DoD policy that only authorized DoD personnel will have access and the general public will be denied access.

The section on Former FAA Parcel states the following:

*Operation*

Upon completion of construction activities, the use of the existing trail on-site would likely be lost, replaced instead with family housing and community support facilities. Therefore, Alternative 1 would result in impacts to the access and the use of the existing recreational resource at the former FAA parcel. However, it is worth noting that the resource lost due to the proposed action is not unique to the region; comparable resources (e.g., jogging and walking trails) would be available in the adjoining properties. Therefore, Alternative 1 would have less than significant impact on the recreational resource at the former FAA parcel. The statement that "compatible recourse would be available in the adjoining properties.", which is found elsewhere in this section, lacks any specifics as to what those resources are and their ability to absorb additional users.

greater detail on training activities, please see Volume 2, Section 2.3 Proposed Action: Training Activities. Erodibility data, based on the USDA Soil Survey of Guam, is the best available information on erosion potential by soil type on Guam.

While all of the SDZ area related to firing ranges on Guam do indeed have varying topography, the actual range sites are indeed located on relatively flat surfaces.

**I-553-013**

Thank you for your comment. As described in the DOPPA, the five NMS landing zones would be unimproved; i.e., no improvements would be made that would increase erosion of runoff into Fena Reservoir, thus negligible impacts to water resources would occur.

The impact assessment for proposed foot, wheeled, and tracked vehicle traffic has been updated to include drainage channels, an example BMP, and revised analysis in response to this comment. At this time, no specific buffer areas are identified. Prior to implementing training activities, site-specific surface water quality measures would be identified and implemented as appropriate for each buffer area.

**I-553-014**

Thank you for your comment. Noise levels due to aircraft overflights and weapons firing are added to Figure 6.1-1. Figures 6.2-3 et. al. are color-coded for land ownership. Figure 6.2-3 shows the aviation training noise contours and Figure 6.2-4 shows the proposed contours due to hand grenade range training.

**I-553-015**

Thank you for your comment. The addition of berms would reduce noise levels 10-15 dBA. Soundproofing of homes is not proposed at this time.

I-553-021	<p>V2, 9-18, 9.2.2.1: This section states:</p> <p>To meet the demands of the Marines dependents, and civilian workers, the MCCS is proposing a wide range of QOL facilities. Examples of proposed uses include: hobby shop, indoor physical fitness centers, indoor recreational resources (e.g. bowling, skating rink), youth center, theater, and recreational pavilion. By presenting alternate recreational options to the potential users, impacts to the recreational resources on non-DoD lands in north Guam could be lessened. Therefore, does the proponent propose to restrict the Marines to these facilities? Of course not, but that is what this implies. There is an inheriting imbalance to this recreation impact. The Marine get new recreation facilities solely for their use while the total Guam community, including DoD users, will compete for the limited and overused public facilities.</p> <p>V2, 9-19, 9.2.2.1: The amount of loss of use of recreation resources needs to be quantified.</p> <p>V2, 9-22, 9.2.2.3: What is the solution and mitigation to the wear and tear on recreational resources. Mitigation should include an increased commitment of funding for this purpose. Education alone will not provide a solution and mitigation.</p>
I-553-022	<p>V2, 9-22, 9.2.2.5: Naval Munitions Site operations will restrict recreation and cultural uses, such as hiking, hunting, and the annual Good Friday process to Mount Jumullong-Manglo.</p> <p>V2, 9-31, Table 9.2-3 is incorrect as to "no impacts on Recreation" as the current public trails in the area will be closed during training.</p>
I-553-023	<p>V2, 9-32: Table 9.2-1 is labeled "Summary of potential mitigation measures" and yet none of the listed items are mitigation. The carrying capacity study, as previously stated, should be an essential study for this EIS. DoD resources for the VCO program are already on-going. An outreach program is not defined. What is it, a program to tell people what is off-limits? Why is the only meaningful item on page 9-23 of Marine Corps involvement of the coastline of Hilaan not included in the table?</p> <p>Mitigation should include the following:</p> <ol style="list-style-type: none"> <li>1. Physical improvements, funded by DoD, to recreation resources to be determined by the people of Guam, not DoD, and to include areas off-base open to the public.</li> <li>2. A specific commitment for DoD to fund the maintain of these facilities.</li> <li>3. A specific program, with guarantees of management and public access and use, to DoD lands for recreational and cultural activities.</li> </ol>
I-553-024	<p>V2, 12-1: The DEIS is not revealing the information of the impacted cultural resources since the cultural resources are not sufficiently described (listing in a table is inadequate) and surveys are not included in the Appendix, under the guise of legal protection, without a clearly demonstrated threat. This effectively prevents the public from commenting on</p>

### I-553-016

Thank you for your comment. Consistency and compatibility with adjacent land uses is discussed in the land use chapters. DoD has no decision-making authority over projects and land uses beyond the military base boundaries. The Government of Guam controls the type and location of development and is responsible for ensuring the development is consistent with the existing and future community development plans. There are federally funded studies underway, outside of the EIS process, to address encroachment issues and other community concerns. The Office of Economic Adjustment has awarded millions of dollars to the Government of Guam specifically to shape outcomes of the proposed action that benefit and enhance the quality of life for the citizens of Guam. Workforce housing is outside the scope of the EIS, but is identified in EIS, Volume 6 Section 1.2, as a related action. There are private development proposals to provide workforce housing to support the military build-up described in the EIS. These proposals are being reviewed by the Guam Land Use Commission. The developers are likely to proceed with the construction or renovation for workforce housing before the EIS Record of Decision is signed. The Navy will issue construction contracts requiring the contractor to provide housing in accordance with specified health and safety standards. Contractors will be required to provide medical services and transportation for the workers. The Navy would not dictate the pay scale of the workers.

### I-553-017

Thank you for your comment. You are correct that there are cultural, recreational and natural resources uses of the land. The land use section of the EIS focuses on the physically developed versus undeveloped characteristic of the property. The uses you describe are transient activities that could occur on undeveloped or vacant land. The recreation and cultural resource chapters address activities that are not dependent on modern manmade facilities, such as hiking

I-553-024

this section. In addition the applicable ICRMPs should be included in the Appendix, and not just by reference. Cultural resource surveys have yet to be completed. Only showing project's in relation to archaeological probability is insufficient to provide an analysis of the impacts. Thus this section is deficient.

V2, 12-14: Table 12.1-8 omits any features from the Navy's use of NCTS as a communications station and communications intercept station from 1944 on. Features exist and should be included. This should include the original 1944 intercept foundations by the gas station, building 150, building 112, and building 200 including the circular antenna.

V2, 12-16, 12.1.2.3: The Former FAA Parcel was the location of the execution of war criminals. This is should be discussed.

V2, 12-16, 12.1.2.3: This section is incomplete without the required cultural resources study for Harmon Annex Area.

V2, 12-19, 12.1.3.3: "Route 15 Valley and Escarpment" term is continually used. This is an invention of JGPO. The appropriate Chamorro place names of Pagat, Sasayan, and Lajuna should be used. This is clearly a bias against the local culture. The survey is stated as incomplete and is required to be completed for the EIS. What is further missing from the Pagat cultural resource listing is the Cepeda Chamorro family ranch, in existence since 1959, that should be considered a traditional cultural practice according to federal regulations. In addition, the Taitano Chamorro ranch at Lajuna, in existence since the early 1950s is not discussed. This is also a traditional cultural practice.

V2, 12-19, 12.1.3.3: Only 60% of the Route 15 impact area is incomplete. This does not meet the requirements of NEPA and NHPA.

V2, 12-32, 12.1.5.2: The Access Road has no archaeological sites. What about the road itself, the concrete foundation atop of the false Mount Lamlam summit, and the traditional cultural property of the Good Friday procession for Mount Jumullong-Manglo.

I-553-025

V2, 12-39, 12.2.2.1: What are the specific adverse impacts to the Haputo Archaeological Site? Haputo Beach, reef, jungle, and village site will attract the thousands of Marines. There is a need for a detailed on-site management plan.

I-553-026

V2, 12-41, 12.2.2.2: The statements regarding audible change in Pagat and loosing public access to Pagat are adverse impacts to the cultural resource according to the ACHP section 106 regulations, and are not just a public perception. Again, a lack of an objective writing of this document. The audible impact needs to be clearly researched and defined. Pagat will have to be cleaned up for range activities as a related study calculates 1,000+ rounds will not be captured by the berms and traps of the range. To conclude that restricted access is beneficial lacks the meaningful use of a management plan and further has a bias against the civilian community. What is the vandalism and is it only caused by civilians? The military, which will still have access, has never done acts of vandalism?

or homage to ancestors. Other transient activities that are not dependent on modern facilities and not addressed under land use could include hunting or ceremonies and would be addressed outside of the land use chapter of the EIS.

The land use discussion throughout the chapter is limited to the project area and adjacent areas. No actions are proposed at or adjacent to the Guam Territorial Seashore Park or other south or southeastern coastal area.

### I-553-018

Thank you for your comment. Impact discussions on non-DoD lands are in Section 9.2 for Volumes 2, 3, 4, and 5; and Section 11.2 for Volume 6 of the EIS.

At the outset of the EIS, it was not believed that a carrying capacity study for the recreational resources was needed. As impacts were assessed, it became apparent that such study should be conducted; therefore, a mitigation measure was included in the EIS for a carrying capacity study to be performed.

### I-553-019

Thank you for your comment. As part of the studies for the EIS, several areas were identified as traditional cultural properties, including Pagat, and other general areas were identified as places where people gathered plants, hunted, and fished. Information on the importance of Pagat is discussed in Chapter 12, Cultural Resources.

### I-553-020

Thank you for your comment. At the outset of the EIS, it was not believed that a carrying capacity study for the recreational resources was needed. As impacts were assessed, it became apparent that such study

I-553-027

V2, 12-48, 12.2.2.3: There is no discussion of the impact on the traditional cultural property of the crosses on top of Mount Jumullong Manglo and the traditional Good Friday procession up the mountain to the crosses.

V2, 12-48, 12.2.2.4: Construction on Non-DoD lands: refer to prior comments that there are cultural resources in the area.

V2, 12-48, 12.2.2.5: There is a failure to explain how proposed mitigation measures and the PA will inherently reduce significant impacts to less than significant levels. Significant levels needs to be defined.

Regarding Haputo, how do signs and brochures reduce vandalism? What is needed is an onsite management program to guide use. There will be thousands of Marines and civilians who want to visit Haputo. Just their impact of walking in the jungle of Haputo will change the character of the site.

V2, 12-50, 12.2.3.1: Operations will increase vandalism which is an adverse effect. How is this to be effectively prevented? For example, will base security be continually trained to identify artifacts and patrol these sites?

V2, 12-63, Table 12.2-1: How does public education mitigate to less than significant impacts? This is not justified. The public education is not described. It is not public education to tell the public they cannot access and/or the cultural resource no longer exists.

I-553-028

V2, 12-65: Comments on Table 12.2-6, Summary of potential mitigation measures:

1. Date recovery is sanctioned destruction.
2. The Pagat Preservation Plan should be developed by the public not DoD, but funded and implemented by DOD.
3. The cultural access statement is deliberately vague and meaningless affording DoD the flexibility to offer some sort of public access at their convenience and is not acceptable. Witness the occasional (not even once a year) Fena Massacre access. This should be a commitment of access every weekend day, holidays and selected weekdays all from dawn to dusk and DoD should develop and maintain, under local supervision, the plan and development. What is envisioned is a parking lot on the plateau and trail access. There will be no firing activities during this time frame.

I-553-029

V2, Chapter 13: A general comment that photos are credited to Google Earth and other public domain sources. Did the author of this actually go to these locations to verify the views? Given this point and the ones that follow, I question if the author actually when to these locations. Viewsheds have not adequately been defined.

V2, 13-31, Figure 13.1-37: This is not a picture of Pagat Point, but a view toward Pagat Point from Pagat. Pagat Point is hidden around the curve of the coastline.

V2, 13-32, Figure 13.1-38: This view does not show "...beyond Pagat Point". It does show Sasayan and Pagat.

should be conducted; therefore, a mitigation measure was included in the EIS for a carrying capacity study to be performed.

Ague Cove trail, which involves the use of the former FAA property, leading to the coastline, is included in the EIS and can be found in Volume 9, Appendix G. According to the Government of Guam, Department of Parks and Recreation, visitor counts to the recreational resources on its properties are not maintained. At present, the Government of Guam and private citizens comprise ownership of the former FAA parcel. As such, qualitative statements were used to assess potential impacts on site such as the former FAA parcel.

I-553-021

Thank you for your comment.

One of the intended effects of providing quality of life (QOL) facilities near the Main Cantonment is that, by providing recreational resources in convenient location for the Marines and their dependent, recreational resources on non-DoD lands may experience less visitors and potential impacts on these resources may be decelerated. There are no plans to restrict the Marines and their dependents to only the QOL facilities.

A recreational resources carrying capacity study is proposed to measure the capacity of the existing recreational resources on Guam. Quantifiable determination and appropriate mitigation measures may be made when baseline condition is established.

I-553-022

Thank you for your comments. The EIS has been revised as such.

I-553-030	V2, 13-67, 13.2.2.1: Regarding Finegayan, the view from Haputo Beach inland is impacted by the towering Marine Corps headquarters building. What is the Haputo Point Overlook mitigation that could lessen to a level of less than significant?
I-553-031	V2, 13-70, 13.2.2.4: The entire area is not “entirely under DoD ownership”, especially considering the proposed acquisition for an access road. Public views are not limited in the area. This area is heavily used by hikers. The new road, landing pads, and fencing are not “in keeping with the current features of the area”. Contrary to the statements conclusion, there will be impacts to the visual resources in the area.
I-553-032	V2, 16-45, 16.2.2.1, the issue of the massive number of DoD dependents coming to Guam that will compete with Guamanians for jobs on-island and therefore fill a significant number of positions in the federal, Government of Guam and private workforce and therefore excluding the local workforce is not addressed.
I-553-033	V2, 16-78: Table 16.2-46 portrays additional Government of Guam staffing requirements. For GFD, needing only 11 personnel is incredibly low. They probably need 3 to 4 new fire stations in the north alone will associated EMTs.
I-553-034	<p>V2, 16-99: Table 16,2-53 should include the following:</p> <ol style="list-style-type: none"> <li>1. Spacing out of DoD construction to a 10 to 12 year time frame.</li> <li>2. DoD to fund ALL Government of Guam financial requirement for the life of the military buildup.</li> <li>3. Stop using the meaningless vague terms of “assist” and “recommend” and provide specific commitments.</li> <li>4. DoD can currently recruit for civil service positions solely on Guam or Congress can pass legislation for mandatory preferential hiring for all federal jobs on Guam for residents of Guam. In essence, if locals meet the qualifications, they have to be hired.</li> <li>5. What is an orientation course on local culture and history? When I took the newcomers orientation briefing at Andersen AFB, a Hawaiian came in for 5 minutes and told us where the local homosexuals hung out. The point being that a good idea became insulting and meaningless and certainly responsible groups of locals, should be hired to provide this orientation.</li> </ol>
I-553-035	<p>V2, 17: There is no listing of hazardous material to be generated by this proposed action. Without the listing, there can be no environmental impact statement relative to hazardous materials.</p> <p>Who is going to coordinate, fund, and monitor the mitigation? There needs to be a requirement for JGPO to coordinate the mitigation and an independent monitoring for compliance function separate, apart from DoD.</p> <p>V2, 17-66: Potential mitigation measures for hazardous materials and waste list virtually nothing with the statement of “No potential mitigation measures are required”. What should be required is that all hazardous materials and waste generate by the buildup shall be shipped off-island for disposal at DoD expense.</p>

### I-553-023

Thank you for your comment. As documented in this EIS, DoD acknowledges the existing sub-standard conditions of key public infrastructure systems and social services on Guam and the interest to have DoD fund improvements to these systems and services. DoD’s ability to fund actions is limited by federal law. However, to minimize adverse impacts associated with the proposed military relocation program, DoD is leading a federal inter-agency effort to identify other federal programs and funding sources that could benefit the people of Guam.

### I-553-024

Thank you for your comment. Within this document, the locations of archaeological sites are withheld from the public in accordance with the Archaeological Resources Protection Act and National Historic Preservation Act, but the Guam State Historic Preservation Office and other consulting parties have had access to this data. The impacts to these sites are discussed in Chapter 12 of the DEIS and a summary of the surveys is included in Volume 9, Appendix G of the FEIS.

### I-553-025

Thank you for your comment. Impacts to Haputo as a recreational site are discussed in Volume 2, Chapter 9, section 9.2.2.1. Impacts to Haputo are also discussed in Volume 2, Chapter 12, Cultural Resources.

### I-553-026

Thank you for your comment. DoD understands the importance of the cultural and historic issues related with land in Guam, and in particular those associated with the Pagat site, which is listed on the National Register of Historic Places. As stated in the DEIS in Section 12.2, no direct disturbance to the Pagat site would occur from the construction or operation of the proposed firing range. Because of a drop of 300 feet in

- I-553-036** | V2, 18-13: There should be a requirement for aircraft routing to be away from residential areas to avoid potential fatalities.
- V2, 18-26, 18.2.8: I am appalled there are no potential mitigation measures for public health and safety: Just a few that needs to be required:
1. Funding to support all Government of Guam required facilities and operations due to the military buildup.
  2. Avoidance of residential, commercial, and hotel areas for aircraft operation in the event of crashes.
- I-553-037** | V3, 2-1, 2.1: This introduction divides the Marines' training into two components as follows:
1. Guam components of training ranges and maneuver areas for individual and crew weapons' qualification and familiarization.
  2. Tinian for the next state for tactical employment of the basic skills developed on Guam.
- This raised two concerns. First, should not the marines already have these skills prior to being ordered to these units or do not the Marines have these skills? Second, an alternative should be evaluated to have all the training accomplished on Tinian as there are inheriting advantages to have the training accomplished at one training location.
- I-553-038** | V3, 2-6, 2.1.1.3: This section discusses reasonably foreseeable training and should be included in this EIS. If not discussed in this EIS, then the document is flawed through segmentation.
- I-553-039** | V3, There is no discussion of relocating the International Broadcasting Bureau from Tinian to either Saipan or Guam. By removing the IBB from the EMUA, sufficient real estate is available for all Marines' training on Tinian.
- I-553-040** | V6, 2-84, 2-88, and 2-89, 2.3.7 and figure 2.3-4: There is listed under Long-Term Alternatives a new sewer outfall that is not subject to the required NEPA evaluation in this document. The route shown on the drawing traverses a scenic coastline with a pristine limestone forest and would traverse a portion of the Hilaan Archaeological Site of an ancient Chamorro Village. This is also a prime hiking destination.
- I-553-041** | V6, 6-9, 6.2.3: Without the completed Navy well and well field configuration study (stated here) it is pointless to make any objective impact statement on water. Finish the water study prior to a public review of the DEIS.
- I-553-042** | V6, 8-12 to 8-20: All these areas need to be mapped and using selecting representative areas is insufficient.
- I-553-043** | V6, 8-21, 8.2.6.1: Regarding Abatement Measures North, the first sentence is illogical and contrary to the requirements of an EIS. The only briefly listed abatement measure is a sound wall and then summarily dismissed, how about the alternative of the Haul Road

elevation from the plateau containing the firing range to the Pagat site on the coast, there would not be a visual impact to the site. Noise from the firing range would be equivalent to noise levels when the raceway is in use. It is the intent during the final design phase to contain all rounds and effects within the footprint of the range through the use of berms and other media. The existing preservation plan would be updated to protect this resource in the future. A Memorandum of Agreement also would be included in the Range Management Plan to allow regular access to this area.

#### **I-553-027**

Thank you for your comment. Impacts to Mount Jumullong Manglo from trail improvement or use are discussed in Volume 2, Chapter 16, Socioeconomics and General Services. No restrictions would be imposed on access to Mount Jumullong Manglo. Cultural resources and impacts due to construction on non DoD lands is discussed in Section 12.2 of the DEIS. All lands that could not be surveyed because of a lack of landowner permission would be surveyed prior to any ground disturbance. Determining significance levels under the NHPA is discussed in Section 12.2 of the DEIS. For archaeological sites eligible for the National Register of Historic Places under Criterion D, data recovery would reduce impacts to less than significant levels. Haputo would be protected through a long term preservation plan in addition to signs and public education. Public education would include historic awareness training for incoming DoD personnel and would be used to prevent vandalism or collection of materials.

#### **I-553-028**

Thank you for your comment. DoD understands the importance of the cultural and historic issues related with land in Guam, and in particular those associated with the Pagat and Marbo areas. No direct disturbance to the Pagat site would occur from the construction or operation of the proposed firing range. However, DoD acknowledges that maintaining

- I-553-043** | through Andersen South, earth mounds, limiting hours of hauling, limitations of size and speed for vehicles, instructing drivers to drive as quiet as possible, and implementing noise standards for vehicles. Then provide maps where these items are feasible.
- I-553-044** | V7, 3-1 to 3-83, 3; These series of summary of preferred alternatives impacts is subjective conclusions by the authors of the impacts. This lacks objective and should be a series of quantitative statements and tables that is objective. No maps This is inadequate and does not meet the requirements of NEPA.
- I-553-045** | V7, 4-1 to 4-25. There is NO quantifiable information on cumulative impacts and thus this section is seriously deficient regarding cumulative impacts. For example: cumulative noise levels for Yigo residences from the live fire training, haul road, and helicopters
- I-553-046** | General:
1. There is no discussion of global warming in the DEIS and it is a requirement.
  2. While there is a bibliography at the end of each chapter, the authors are not identified. This is a NEPA requirement to identify authorship.
  3. Identify when the authors visited Guam and the CNMI.
  4. Rewrite in a neutral object language that is not bias or racial.

access to these sites is important. Although plans concerning access have not been developed, it is the intent of DoD to continue access should these properties be acquired. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-553-029**

Thank you for your comment. The chapter preparers visited all locations directly affected by the proposed action.

The corrections you noted were reviewed as corrected where appropriate. Description for Figure 13.1-38 will be corrected to say that it shows the view of Sasayan and Pagat.

**I-553-030**

Thank you for your comment. The proposed Main Cantonment, which includes the Marine Corps headquarters building, is situated at least 300 feet from the Haputo Beach. Moreover, the proposed development is set back from the edge of the area of development where the trail to Haputo Beach begins. Looking inland from Haputo Beach, one is likely to see mostly the existing dense vegetation separating the beach from the proposed Main Cantonment.

**I-553-031**

Thank you for your comment. The Naval Munitions Site (NMS) is under the ownership of the Department of Defense (DoD). The Mt. Lam Lam trail (that branches off from the Mt. Jumullong trail) would be an access point to the NMS training area and is not under DoD ownership. The preferred alternative is to use the existing trail, rather than providing a paved or road access. The landing zones (LZs) at the Naval Munitions Site (NMS) would not require any improvements nor would fencing be

required.

It is the intent of DoD to maintain public access to the cultural and historic sites consistent with safety and operational requirements. Restricting access to certain DoD areas at certain times is required to maintain public safety. Final plans concerning access to sites potentially impacted by the proposed action have not been developed. DoD looks forward to working with stakeholders to develop plans for cultural stewardship and access that balances operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

**I-553-032**

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) for information on economic impacts related to the proposed action. Analysis of Labor Force Demand (which begins on page 4-147), under both the unconstrained and constrained scenarios, assumes that some military dependents would be employed as civilian military workers - up to about 940 dependents working as civilian military workers. Analysis in the constrained scenario further estimates that other military dependents would participate in the Guam labor market, and would compete for jobs with other Guam residents.

**I-553-033**

Thank you for your comment. The analysis in this section utilized information provided by the GFD regarding staffing levels and was not meant to reflect existing deficits but to focus on the expected impacts of the proposed action. Although analysis focused on key staffing requirements, mention was made in the existing conditions section regarding facilities and equipment deficits that already exist for GFD. The SIAS and the DEIS are documents that have identified the probable impacts of the proposed action and alternatives based on the best available information. Existing data and information were gathered and

supplemented with interviews with federal and Guam agencies. To provide the public and various governmental agencies with an opportunity to review and comment on the methodologies and assumptions used, the SIAS was included as Appendix F, Volume 9 of the DEIS. Comments provided on the DEIS will also be included to provide the decision-makers with the public views in support and/or opposition of the proposed action and alternatives.

**I-553-034**

Thank you for your comment. Your recommended mitigation measures have been taken under consideration. Expanded mitigation discussion is provided in the FEIS.

**I-553-035**

Thank you for your comment. Volume 2, chapter 17 estimates the quantities of various hazardous materials, hazardous wastes, and toxic substances that may be used as part of the proposed DoD military expansion on Guam as well as their potential impact.

The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, etc. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances.

When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and

operations mandates, best management practices (BMPs), standard operating procedures (SOPs), and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs, SOPs, and other controls are fully described in the EIS document. However, these are not considered mitigation measures since they are already being performed by law and do not represent new actions to "mitigate" hazardous substance usage issues. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive remediation approaches are considered. These actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

**I-553-036**

Thank you for your comment. Volume 2, Section 7.0 defines airspace and potential impacts as a result of military operations on Guam. Airways are established routes used by military aircraft, commercial aircraft, and general aviation aircraft. They are the flight paths on which aircraft travel through airspace similar to land highways. Air traffic refers to movements of aircraft through airspace. Safety and security factors dictate that use of airspace and control of air traffic be closely regulated. Accordingly,

regulations applicable to all aircraft are promulgated by the FAA to define permissible uses of designated airspace. The FAA also controls the use of airspace. These regulations are intended to accommodate the various categories of aviation, whether military, commercial, or private aviation enthusiasts. The regulatory context for airspace and air traffic varies from highly controlled to uncontrolled within Guam and the CMNI. Less controlled situations include flights under Visual Flight Rules (VFR) or flights outside of U.S. controlled airspace. Examples of highly controlled air traffic situations are flights in the vicinity of airports where aircraft are in critical phases of flight (either take-off or landing) and flights under Instrument Flight Rules (IFR), particularly flights on high or low altitude airways. Special Use Airspace (SUA) is specially designated airspace that is used for a specific purpose and is controlled by the military unit or other organization whose activity established the requirement for the SUA. SUA in and surrounding Guam includes Restricted Areas (RAs) and Warning Areas (WAs). Under the proposed action, existing air traffic control procedures would continue. Some flight activities would be accomplished under VFR conditions and along random routes that would not impact commercial or general aviation flying. Military pilots avoid flying over populated areas as much as possible in order to minimize overflight complaints.

**I-553-037**

Thank you for your comment. Marines need regular training to stay current with Marine Corps training requirements. Individual-level training would occur on Guam as travel distances and logistics to Tinian would not be practical for individual-level training. The proposed training ranges on Tinian would support training in tactical scenarios, which requires a larger area than is available on Guam. See Chapter 1 of Volume 3 for additional details.

**I-553-038**

Thank you for your comment. The additional training ranges you refer to

are reasonably foreseeable actions and are identified in Volume 7, Chapter 4, Cumulative Impacts. Many of these ranges are proposed for CNMI. Although initial notional plans have been developed to determine the maximum number of ranges that could be accommodated, there is insufficient detail on these projects to provide a detailed impact analysis. Additional NEPA documentation would be required for these future ranges.

**I-553-039**

Thank you for your comment. Individual-level training must occur on Guam as travel distances and logistics to Tinian are not practical. Chapter 1 of Volume 3 provides additional detail on the purpose and need for training on Tinian.

**I-553-040**

Thank you for your comment. The long-term alternatives are presented only at a "programmatic" level and not in sufficient detail for a NEPA review. Should this long-term alternative be pursued, a full evaluation would be required along with a full NEPA review. The kinds of concerns you raise would be revealed at that time after additional studies were performed. DoD would like to avoid this long-term alternative since the EPA has expressed doubts that it would approve a new wastewater treatment plant outfall in north western Guam. The alternative you cite will not be part of the record of decision for this EIS.

**I-553-041**

Thank you for your comment. Water well locations are a very unique feature and exact location of wells is never completely known until the wells are installed and producing. Geology can change rapidly in a short distance and what is felt to be a good well location may not be viable due to localized rock formations and may require shifting the well (sometimes a very short distance and other times farther). Thus, at the EIS stage, it

is not viable to accurately pin point where wells will be sited. However, the aquifer subbasin in which water extraction is desirable is a known entity and has been described within the draft EIS. That is felt to adequately describe the action to meet EIS requirements.

**I-553-042**

Thank you for your comment. As indicated in Chapter 8, Volume 6 for the North area, Appendix G-2 provides area aerial photographs where the 66 dBA noise contours have been overlaid. Appendix G-2 was inadvertently excluded from the DEIS and is included in the FEIS.

**I-553-043**

Thank you for your comment. The section and sentence in question is under the analysis for the year 2030 when all construction would be complete and the roads would be in normal operation. The follow-on sentence provides the reason for why noise abatement modeling was not conducted - affected residential receptors have driveways with direct access to the roads and a discontinuous noise barrier would not be effective in reducing noise traffic. The suggested measures to mitigate noise from traffic in 2030 would not be appropriate as hauling materials by heavy duty trucks for the military buildup would have ceased and the haul road network would have reverted back as part of the overall Guam road network.

**I-553-044**

Thank you for your comment. This section has been updated in the FEIS.

**I-553-045**

Thank you for your comment. Due to the complexity of the project, there are two parts of the cumulative impact analysis: the summary of impacts for all components of the proposed action (Volume 7 Chapter 3) and an

assessment of the additive impacts of the proposed action in combination with other past, present and reasonably foreseeable projects (Volume 7, Chapter 4). A systematic methodology was applied in both analyses.

Volume 7, Chapter 3 summarizes the combined potential impacts of all of the preferred alternatives on Guam and Tinian. The impacts of Volumes 2 through 6 are discussed by resource. At the end of Volume 7, Chapter 3.3 there is a table summarizing the combined impacts of all long-term (operational) components of the preferred alternatives. Significant impacts are identified. Trends in the resource health on Guam and Tinian since World War II are described. This section includes limited quantitative data for proposed action impacts. For example, special-status species habitat loss due to the proposed action and current amount of habitat available island wide is presented in Volume 7, Section 3.3. There is no quantitative island-wide data readily available for most of the resource areas assessed and the impact analysis is often qualitative.

Volume 7, Chapter 4, Cumulative Impacts, assesses the potential additive impact of the EIS proposed actions when combined with potential impacts of other past, present and reasonably foreseeable future actions. The period of consideration for the cumulative impact analysis is 2004 to 2019. The project list is based on best available information from DoD and the Guam Land Use Commission database. There is no National Environmental Policy Act (or similar) document disclosing project impacts for most of the cumulative projects listed; therefore, there is insufficient data on most cumulative projects listed to conduct a quantitative impact analysis. In Chapter 4 a table summarizes the potential cumulative impacts on Guam and another table summarizes the potential cumulative impacts on Tinian. Potential additive cumulative impacts are identified for a number of resources. Mitigation measures are proposed earlier in the EIS. The cumulative

impacts analysis has been expanded in the FEIS, including the addition of climate change analysis and analysis of cumulative impacts to coral.

**I-553-046**

Thank you for your comment. The list of preparers is included in Volume 8 of the EIS. Many visits to Guam and Tinian were undertaken in preparation of this EIS. Additionally, many of the DoD staff and its contractors and subcontractors have offices and live on Guam.

Department of Defense Officials,

I'm Jessica Pettigrew. I am a Certified Nurse Midwife and I moved to Guam from Connecticut six months ago to accept a position in a private practice caring for local women, their babies and their families. In the short time I've been on the island, I have come to love the island community and the impending military build-up is a source of great distress to me and others in our community. Please consider the following points:

I-554-001

1. Pagat cave: One of the first hikes I did on the island was to the beautiful and culturally important Pagat Cave. Upon our arrival, the cave was lit up with many candles left by the previous explorers. We talked and swam in the cool cave water illuminated by several candles. I learned of the significance of this cultural site to the Chamorro people. Pagat has also come to symbolize things that will be taken away from the local people as a result of the build up. For this reason, is it possible to leave Pagat cave untouched? An alternative is to allow public access all the time except when it is being used for training exercises but there are a couple of problems with this suggestion. First, it is the DOD making the rules and "giving" the local people permission to visit one of their important cultural sites. It should be the other way around; the local people have access all the time and allow the military to use it on selected days. Second, as a cultural site, it is extremely disrespectful to conduct war training exercises on sacred ground.

I-554-002

2. Tourism revenue contributes significantly to the local economy. What effect will the dredging activities have on local beaches where tourists gather for some of the best snorkeling and diving in the Pacific? How can these effects be lessened? One suggestion is to relocate the dredging activities to the island of Tinian.

I-554-003

3. Life on Guam is very expensive, even for a young professional like myself. How are the local people, mostly middle class, to absorb the increased cost to utilities that will result from the buildup? Could green energy and sustainable development be part of the build up plans?

4. Finally, aside from specific issues relating to the DEIS, the addition of several thousand young men on the island, their cars congesting the streets, their alcohol (I have many friends in the military here and they drink...and drive), their general lack of respect for local culture will significantly impact the quality of life for island residents. Although Guam is a wonderful place that I am happy to call home, it is likely that within a few years I will choose to leave the island due to the effects of the buildup: increased cost of living, difficulty in finding housing, decreased access to public land for hiking and camping and the overall significant cultural impact that will undoubtedly accompany the build up. The US government has forced things like this through for many years dating back to the 1800s when Native Americans land was seized, to the invasion of Iraq. Although people here don't necessarily realize it, as an outsider I am aware that the DOD does not care what the people of Guam think, nor what the Government of Guam thinks and that these comments are all just a benign exercise in "democracy" for a territory whose citizens are denied the right to vote. Before dropping thousands of soldiers onto our tiny island and essentially saying "deal with it", please consider an alternative scenario. This could include transferring military personnel to Hawaii (a much larger collection of islands), or taking a step back, slowing down the time line and working with local people in a real and meaningful way to ensure that the effects of the buildup are minimized.

Kindly,

Jessica Pettigrew

I-554-004

\* currently, military personnel get overseas housing allowance, this encourages them to spend all of their housing allowance. If this was switched to domestic housing allowance where they keep the ~~used~~ unused portion of the allowance, it would increase competition + decrease housing costs for nonmilitary + military alike.

## I-554-001

Thank you for your comment. DoD understands the importance of the cultural and historic issues related with land in Guam, and in particular those associated with the Pagat area. No direct disturbance to the Pagat site would occur from the construction or operation of the proposed firing range. However, DoD acknowledges that maintaining access to these sites is important. Although plans concerning access have not been developed, it is the intent of DoD continue public access should these properties be acquired. DoD looks forward to working with stakeholders in developing plans for access that balance operational needs, public safety concerns, and the continuing public use and enjoyment of these sites.

## I-554-002

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) for information on impacts the proposed action would have on Tourism. Tourism impacts are discussed in section 4.3.7 and your specific concern is discussed in a subsection titled "Impacts on Ocean-Based Tourism from Environmental Degradation."

The FEIS recognizes that the utility systems on Guam are substandard. These utility systems must be brought up to standards. To accomplish this task, it is likely that utility rates would change to help fund needed improvements. DoD does not set these rates. DoD would work with GovGuam to assist with improving potable water, wastewater, power, and solid waste systems with a goal of getting these systems into compliance with current federal and Guam environmental laws and regulations.

## I-554-003

Thank you for your comment. DoD recognizes the importance of reducing adverse effects on the people of Guam, its natural resources,

and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short-term impacts of construction are managed effectively and that the long-term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

**I-554-004**

Thank you for your comment. The Draft EIS anticipates that military housing would be built within the main cantonment area. It is anticipated that the majority of Marine families would rent units in the military housing and generally would not compete with Guam residents for available housing units. After the construction period, housing and rental prices could decline because the construction labor force (not including the H2B who will live in dormitory type quarters) would leave Guam. Civilian military workers may vie for Guam housing; however, residential housing needed for these long-term workers would likely be about 3,200 units (maximal) by 2020 (Socioeconomic Impact Assessment Study [SIAS], Table ES-3, page v).

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 416

Received: 2/10/2010 7:07:47 AM

I-555-001

The people of Tinian are until now already suffering from possible contaminatin on this island. Military build here will continue to harm everyone. I am a person with a history of medical illness called Eczema. I have resided in California and in Guam but I have never experienced worsening of my skin until I have moved here in 1995. For many years I know of my allergies but living here on Tinian has given me more suffering than ever. I have witnesses who have known me and how I have looked before. In March, June and September of 2007, I have been constantly in and out of the clinic due to unknown infections of my skin. I met a man who claimed he was stationed here in WWII and asked me what was wrong. I showed him my skin and he said "You don't know what was dumped in your waters." I have seen non-resident workers come from Nepal, China and Phillipines to this island completely flawless, yet they suffer an allergic reaction to something. People who have passed on with cancer but yet they are not smokers or beetlenut chewers.

I kindly ask of you that before the military begin their training here on Tinian, please check the levels of contamination and I believe the people of Tinian should be compensated for the suffering they have been enduring for so many years.

## I-555-001

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. As with all industrial-type operations such as those being performed by the DoD, there are various chemicals (e.g., hazardous materials/wastes) that may be used. However, when feasible, the DoD is committed to reducing or eliminating the use of various hazardous materials/wastes to the greatest extent possible and substituting them for less toxic substances. Hazardous substances (e.g., hazardous materials/wastes) that may be used include: pesticides and herbicides; fuels, oils, and lubricants; solvents; explosives; cleaning agents; and corrosives. When using hazardous materials/wastes, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs) and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs and controls are fully described in the EIS. If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more

aggressive remediation approaches are considered. These and other actions will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, or other hazardous substances.

I-556-001

Hello military,

After all the hearings you well know the issues, more traffic, no plan;  
more crime, no plan; more cost to all citizens of Guam, no plan;

During the last month how many DUI crime incidents with your present profile on Guam, do you even know or care?

How about keeping all military on base all the time, at the very least DUI checkpoint on weekend nights at the gate, discharge the drunk trailer trash after sentence served on Guam.

Most preposterous, you seriously think anyone could possibly believe that you will mitigate the issues between local population and jarheads, what sunday school classes to re-orient? Didn't work so well in Japan did it, why would the Japanese otherwise want to pay billions of dollars to get rid of the US military??? That is the true arrogance of you asses, or perhaps it is all just a stupid sham to conform to the law, do you really give a shit?

Here is a suggestion: there is a dick in Wyoming, scared of his shadow among other things (shot his hunting buddy right?), why don't you put the jarheads there, surely the dick would love it and feel much more secure. Hawaii would love the aircraft carrier and you savages of life would not have to dredge 39 acres of reef.

You are the evil, who will protect this small island from this evil?

Sincerely

A white old man who says "fuck off and kiss my ass"

please put me on your NSA list and watch me carefully, I most definitely will curse any military I ever encounter in my hopeless and helpless plea for you all to just piss off and stop ruining small communities.

After the military stay on island, how will the local Chamorros cope with the sudden and substantial change to the environment?

I-557-001

### I-557-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The Final EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the Final EIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

What if the dredging kills endangered species of coral? What if the dredging kills indigenous coral?

I-558-001

#### I-558-001

Thank you for your comment. Corals have a global distribution, occurring mostly in tropical waters. Up until recently, their widespread range has prevented any possible listing of corals as endangered species either locally or globally. In May of 2006, two species of Acropora corals were listed by the United States as Vulnerable under the Endangered Species Act. These species have not been observed in Apra Harbor during dive surveys. No indigenous coral species are listed. As identified in Volume 4, Section 11.2.2.5 - 11.2.2-7, federal law recognizes the value of irreplaceable marine resources and requires compensatory mitigation. Compensatory mitigation is defined as the restoration, establishment, enhancement, and/or preservation of aquatic resources to offset unavoidable impacts to waters of the U.S. (including special aquatic sites, such as coral reefs). The compensatory mitigation is subject to approval by USACE, under the CWA, through the Section 404/10 permit requirements. The Navy is considering a suite of potential options for compensatory mitigation for the loss of coral in Outer Apra Harbor as identified in Volume 4, Section 11.2.2.7. Compensatory mitigation for unavoidable coral community impacts includes the following options: Option 1: Artificial Reefs within Apra Harbor or Other Locations; Option 2: Watershed Restoration and Management (Aforestation, Apra Harbor and/or Philippine Sea Riparian Enhancement, Stream bank stabilization component [all project goals to reduce sediment discharge into nearshore waters]) Option 3: Coastal Water Resource Management (Shallow Water Reef Enhancement); and Option 4: In-Lieu Fee or Mitigation Banking Program. The final conceptual determination would not be made until the Record of Decision on this EIS. More detailed identification of potential mitigation would be done during the USACE permit process. Both artificial reefs and watershed management projects would be considered as potential compensatory mitigation, and it is possible that a combination of those potential mitigation efforts that are listed below would be appropriate. As identified in the 10 April 2008 Federal Register, 40 CFR Part 230, the final USACE compensatory

mitigation rule, permit applicants are required to mitigate to no net loss of ecological services and function.

I-561-001

How will the Military protect the freshwater lens, the islands most significant source of drinking water, from any munitions waste that leaches or permeates the limestone aquifer near or around proposed firing ranges of Marbo Caves, Anderson South and Finegayan?

USGS Water Resource Investigation 2003 - "Ground water supplies about 80 percent of the drinking water for the islands 150,000 residents and nearly one million visitors per year. In northern Guam, water is obtained from wells tapping a fresh ground-water lens in a highly permeable limestone aquifer."

#### I-561-001

Thank you for your comment. The DoD and regulatory agencies are equally concerned about preventing contamination of surface waters and groundwater (particularly drinking water aquifers). The EIS describes numerous programs and actions that will be taken to protect surface waters and groundwater from potential contaminants. Refer to Volume 9, Appendix D, Project Description Technical Appendix, Munitions, for a discussion of the munitions and constituents of concern associated with the proposed ranges. Range designs include targets with physical barriers behind the target, such as an earthen berm, that are designed to stop and contain the spent round. Best Management Practices (BMPs) are used to further contain spent rounds, fragments and materials from weapons firing, and reduce any impacts to the environment. The proposed ranges will be designed and maintained in accordance with all applicable federal and Government of Guam regulations. Specifically, Military Handbook 1027/3B contains procedures for reducing potential impacts from ranges through the implementation of BMPs. These include introducing soil amendments, vegetation management, engineering controls, instituting contaminant monitoring, reclaiming, and recycling. With ranges, lead is the primary leaching contaminant of concern and best management practices can minimize or prevent leaching of this constituent. Impact rounds from pistol rounds generally stay intact and impact rounds from rifle rounds often fragment. Intact rounds and rounds fragmented into relatively large pieces are not easily transported by natural transport mechanisms (such as groundwater) and are largely contained within the berm or physical barrier where they can be recovered and disposed. Through the proper design of ranges, application of BMPs, and monitoring, the potential for groundwater contamination would be minimized. BMPs can reduce or eliminate the leaching of lead to the environment. These procedures include controlling soil pH to between 6 to 8 to prevent dissolution of lead, mining of lead from back stop berms, implementing a soil leaching monitoring program, and adding phosphate containing soil

amendments to bind dissolved lead to the soil. Prior to building the ranges, an engineering study would determine the minimum depth of soil cover to ensure sufficient soil cover of the limestone, and to assess the suitability and optimum technique to add soil amendments such as phosphate to prevent lead leaching. In addition, when percolating water reaches the porous limestone the pH will increase, encouraging the precipitation of lead out of solution. The DoD will monitor for selected contaminants of concern. If monitoring identifies significant impacts, such as indications that chemicals of concern may exceed regulatory standards, reduce beneficial uses, result in adverse human or environmental health effects, or conflict with federal or Government of Guam regulations, then additional action would be taken to address these impacts. Furthermore, the EIS will be revised to explain how volcanic basement rock protrudes up through the limestone of the NGLA, thus separating nearly all of the proposed ranges from groundwater supply wells. The low permeability of the volcanic rock acts as a barrier to groundwater movement. A figure in the EIS will support this text description. However, there are two ranges where leaching contaminants would have the potential to impact the groundwater within the capture zone of water supply wells. The northwestern most grenade range proposed under Alternative B overlies the capture zone of the Marbo Wells. In addition, leachate from the southwest most small arms range under Alternative B may have the potential to reach the NGLA inside of the capture zone of wells M08 and M09. Alternative B is not part of the Preferred Alternative considered in the EIS.

I-562-001

We the people of Guam need to work on ourselves before we can accomodate others. why should such a small island house the military anyways. i could understand back in world war 1 and world war 2 how each foreign country needed Guam. because it acted as a stop between Asia. i feel that lack of technology and lack of intelligence back then were not as complex as today, that is the reason for creating a pit stop or base. but i feel that now a days there is enough technology to fix the problems of the world which in the problems gives the need for military's for every single country. i know there will be a percentage of my brethren in the CNMI who will dislike what i am about to say but i fell that the military should be put in the CNMI. after all they need the support. GUAM already has two branches of the military. we dont need a third. the CNMI is only 15 minutes away from Guam and i feel that its all the same island range.

### I-562-001

Thank you for your comment, which focused on how Guam was chosen for the military relocation rather than other places within the Pacific region. Volume 1 at Section 1.4 in the Draft EIS provides a Global Perspective Background, which explains the various international and military capability requirements that were considered for the realignment of military forces. Because this section of the Draft EIS explains the background analysis of strategic military capability locations within the Pacific, it will remain the same for the Final EIS. For instance, this section describes how several locations were considered throughout the Pacific region for the military relocation based upon 1) response times, 2) freedom of action (the ability of the U.S. to use bases and training facilities freely and without restriction at a particular locale), and 3) international treaties and agreements with Japan and other Western Pacific allies. The U.S. locations in the Pacific region considered for the military relocation were Hawaii, Alaska, California, and Guam. Non-U.S. locations considered included Korea, the Philippines, Singapore, Thailand, and Australia, because they are allies to the U.S. and are well situated for strategic force deployment. After analyzing the international and military capability requirements for each locale mentioned above, Guam was the only location for the relocation that met all the criteria.

I-563-001

The Environmental Protection Agency needs to take a look at how the military treated our island in the past. There are several water wells that exist on Anderson Airforce Base that may not be used as a water source for the island because of well contamination. A responsibility the Airforce had to protect a precious resource. They also dumped hundreds of vehicles off a cliff of Ritidian point. The jungle hides this mountain of wreckage created by the military. Did you know that the Navy bulldozed an entire powerplant off Orote point into the ocean? That is why the waters off Agat contain PCB's. The same thing happened in Merizo. The military contaminated the waters. USDA Rural Development just concluded a waste clean up in the village of Dededo, where a homeowner buried thousands of pounds of car batteries in the ground soils, a dirty federal secret from the public. How can we trust the Federal Government with our island? They have not even began to clean up the damage they have caused in the recent past. Do not allow this marine build up. It will destroy our island paradise.

#### I-563-001

Thank you for your comment. The DoD is committed to the protection and responsible stewardship of the environment. The DoD is committed to the safe handling and use of all hazardous substances, including lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, etc. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances.

When using hazardous substances, environmental laws and regulations (e.g., RCRA) must be followed by DoD that are designed to be protective of human health, welfare, and the environment. In order to implement these laws and regulations, DoD has developed various procedures, protocol, and directives designed to proactively eliminate or minimize the inadvertent leakage, spill or release of pollutants to the environment. These actions involve comprehensive administrative, engineering, and operations mandates, best management practices (BMPs), standard operating procedures (SOPs), and controls in place to prevent or minimize the inadvertent leakage, spill, or release of hazardous/toxic substances. These BMPs, SOPs, and other controls are fully described in the EIS document.

If a leak, release, or spill is suspected or confirmed, aggressive mitigation measures are used to first clean up the leak, spill, or release as quickly as possible, followed by an assessment of risks to the public and/or the environment and a plan to remediate these risk concerns to within regulatory acceptable levels. These actions generally include environmental media (e.g., groundwater, surface water, soil, air, and/or biota) sampling and monitoring to ensure that and hazards are mitigated quickly and effectively. In many cases, part of remediation plan includes the requirement to perform regularly scheduled long-term sampling and monitoring of environmental media to ensure that remedial actions have been effective. If long-term monitoring indicates that risks to human health or the environment are still unacceptable, more aggressive

remediation approaches are considered. In fact, many such clean-up efforts are ongoing on Guam.

These actions (e.g., BMPs, SOPs, etc.) will protect public health, welfare, and the environment from adverse impacts associated with the use of solvents, herbicides, pesticides, fertilizers, PCBs, MEC, nuclear materials, and other hazardous substances.

Volume Three, is a beneficial area for agricultrre to raise crops and livestock esp. beef and pork. It has been used by our ancestors and should be protected.

**I-564-003** |

You need our help, we too need your help, so say yes and agree to Prohibition on the subject matter of a military build up.

Thanks,

Pls reply.

**I-564-001**

Thank you for your comment. Effects to agriculture are addressed in Chapter 8 (Land Use) and Chapter 16 (Socioeconomics).

**I-564-002**

Thank you for your comment. The Navy has re-evaluated the need to terminate all subleases in the leaseback area and will only propose to terminate subleases in the leaseback area that are within the range footprint and associated Surface Danger Zone of the proposed firing ranges.

As to possible sites for the relocation of any leases, such actions would be under the control of Commonwealth of the Northern Mariana Islands (CNMI) officials as they are responsible for non-federal land use decisions on Tinian. DoD will work with CNMI land use and natural resource officials to ensure that native forest habitat concerns for Endangered Species Act (ESA) listed species are taken into account in any relocation effort.

"There will be a recession-like period after 2014 where business would have to end or cut back. Many workers would have to out-migrate due to job loss." Volume 9, Appendix K, pg.147  
Guam is already going through a recession as it is. My question is who is this really going to effect? It's going to effect us, the children of Guam. The children who in a few years would become the young adults of this society. It makes it harder for us to find jobs, it makes it harder for us to try and support ourselves, our families. In the year 2014 I would be 21 years of age. I would most likely be fresh out of college, having this recession-like period doesn't help me. It doesn't anyone in my situation. All this is causing more and more people to become bankrupt and have to depend on the government, and that causes more problems for the government. They're so corrupt they cant depend on themselves.  
A solution would be to instead of having people from off-island come for jobs, they should try and see first if the people of Guam can fulfill their jobs, and if the employers feel as if they cannot do the jobs they want, then they send for off-island workers. That not only saves the people of Guam from becoming unemployed, but also the earth. It will save the earth from all that pollution being used by those planes that would be taking and sending back the workers that come from off-island.

**I-566-002**

**I-566-001**

Thank you for your comment. As you note, there would be an expected decline in economic activity as the construction phase of the proposed action winds down. However, all economic variables analyzed are expected to be at higher levels of benefit for every year in the foreseeable future than they otherwise would be without the proposed action. For instance, please note Figure 4.3-1 of the Socioeconomic Impact Assessment Study (Appendix F of the DEIS) which shows higher levels of demand for labor during every year, with the proposed action, compared to the baseline trend which shows demand for labor without the proposed action.

**I-566-002**

Comment noted.

I-567-001

The document doesnt seem to address the water demands for the 1000's and 1000's of cubic yards of concrete needed for this massive buildup. I am sure there are standard calculations for 1 cubic yard of concrete and the amount of water needed. That needs to be in the document. When home depot was being built, there was a waiting list for concrete delivery to homes. Imagine the shortage when there are a new base being built.

Also.. Looking at the air force base and the new marine air force area, that looks like a lot of concrete. that amount needs to be put into the the eis to show everyone and GWA that they will be pumping lots of water to make that concrete..

this is no where in the document.. I believe since i didnt read all gazillion pages. if you start to think about how much concrete is needed, it really blows you away.. i have seen the quarries when i go there and the one in barrigada heights is so deep that it the aquifer is exposed.

**I-567-001**

Thank you for your comment. Approximately 50,000 gallons of water will be needed on average per day for concrete production based on the total square footage of the planned facilities. This quantity been added to the GWA industrial water demands.

**I-568-001**

how can the DOD just state in an EIS that they need property off Dod property? its very scary to think that at a whim, people in DC or whatever are looking at maps and say "lets put a range there, put that in the EIS".

in the eis, there is absolutely no discussion on why the the on-base ranges were not looked at. the reason is: its not enough... so, then just put it off base right? its that easy right? sure, if we they locals dont sell, we will just condemn it right? Bin laden is still out there, we need it to train and find him.

**I-568-002**

the eis needs to effectively explain to those that arent in the military or involved in these decisions WHY it is not feasible!! The amount of words to explain why you didnt put it in the EIS really is disappointing - it seems to correlate to how much the military thinks about people off base.

why not the air force golf course? bulldoze that and put the range. why not? because the air force commander will say "i need to golf" or "god forbid we make it noisy for the af base housing people". But, if there are 11 golf courses on guam and only 1 race track, does that make sense to get rid of our race track? Of course not, but to military people, that dont matter.

**I-568-001**

Thank you for your comment. DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

**I-568-002**

I-570-001

I am a resident proximal to the Big Navy Base on Guam in Sumay, and I notice the increase of large "Military Personnel Carriers" down our two lane roads in Santa Rita Village proximal to the Naval Magazine. These roads are one way north and one way south in great need of repair with potholes and no shoulders. IT is nervewracking to drive with them on the road. The thought of more traffic with vehicles this large and the large long bedded trucks going back and forth to the military housing sites are causing hazards to the local drivers.

We are already pretty upset at the Navy for Neglecting these roadways and feel that they are burdening our highways. They need to seriously consider taking some part of repairing roads. Quit using the faulty local government as an excuse for your act of negligence.

### I-570-001

Thank you for your comment. The off-base roadway projects may be funded through the Defense Access Road (DAR) Program and annual allocations through the US Department of Transportation (USDOT) Federal Highway Administration. The Defense Access Road Program provides the means for the Department of Defense (DoD) to pay a fair share for public highway improvements required as a result of a sudden or unusual defense-generated traffic impact or unique defense-related public highway requirement.

Volume 6, Chapter 1 has been updated to include a list of potential DAR projects. The DoD commits to seeking funding for these projects.

The DoD, Guam Department of Public Works and Federal Highway Administration are continuing to work together to identify projects eligible for funding under the DAR program. The DoD will lead an interagency council which includes the USDOT to assist the Government of Guam in seeking funds for projects that are not eligible for the DAR program.

I-571-001

The proposed military build-up on Guam presents a direct assault against indigenous Chamorro culture, identity, land tenure, economic sustainability, and health care. In this comment, I will focus specifically on the results of demographic minoritization that will occur as a direct result of the build-up.

The DEIS states, "Overall, the analysis indicates a sustained increase of approximately 33,500 people on Guam. Most of these people would have political rights as U.S. citizens. Therefore, their sustained presence could affect Chamorro culture in a number of ways, politically and culturally." (Volume 2, Chapter 16, Page 16-91)

The DEIS also states that "an expansion in non-Chamorro voting population could eventually affect the proportion of Chamorro office-holders and government workers; thereby affecting the current government budgets and activities dedicated to cultural issues and practices. It could also affect outcomes of any future plebiscites about Guam's political status." (Volume 7, Chapter 3, page 3-64)

These two quotations reflect JGPO's explicit awareness that the proposed build-up will have a significantly adverse impact on the Chamorro people's continued existence as an indigenous group. As such the Department of Defense is required by law to seek adequate forms of mitigation that would avoid or minimize this from happening.

I assert the follow acceptable forms of mitigation:

1. DoD-secured federal funding for War Reparations;
2. DoD-secured federal funding for a Chamorro language immersion program for grades K-12;
3. DoD-secured federal funding for after-hours Language programs for Adults;
4. DoD-secured federal funding of the Guam Museum;
5. DoD-secured federal funding of a Chamorro Cultural Center;
6. DoD-secured federal funding of an Artisans-in-Training program at GCC;
7. DoD-secured federal funding for a Chamorro Studies Program at UOG;
8. DoD-secured federal funding for Chamorro language publications;
9. DoD-secured federal funding for Chamorro cultural performance organizations;
10. DoD-secured federal funding for the preservation of historic structures both on and off-base;
11. DoD application of Sumay Village as a National Historic District.

## I-571-001

Thank you for your comment. While issues of war reparations are not part of the proposed action and therefore not addressed in the EIS, your remaining mitigation measures have been taken into consideration. Mitigation discussion has been expanded in the FEIS.

The population estimates in the Draft EIS were based on the maximal scenario. The year 2014 includes the foreign worker population on Guam as well as the military and their dependents. However, after 2017, the population increase (from the 2010 baseline) would be approximately 33,500 (maximal scenario) primarily because the foreign worker population would leave Guam. The EIS identifies a number of significant impacts to Guam and its resources; this is summarized at the end of various impact chapters in volumes 2 through 6. Impacts to the Chamorro people are also addressed in the Socioeconomic Impact Assessment Study (SIAS) that is Appendix F, Volume 9 of the Final EIS. Chamorros, although considered a minority population in comparison to the U.S. as a whole, represented over 40% of Guam's population in the 2000 U.S. Census. Chamorro concerns involving political autonomy are impacted by the potential increase in non-Chamorro populations due to the buildup, increasing the likelihood of more non-Chamorro local political office-holders. More non-Chamorro voters would decrease the possibility of Chamorro political self determination. They would also decrease the possibility of successful plebiscites to achieve greater independence from U.S. control.

More information on this topic can be found in the Environmental Justice and the Protection of Children chapters of the Final EIS, specifically, Chapters 19 in Volumes 2, 3, 4, 5, and Chapter 20 in Volume 6, and under cumulative impacts (Chapter 4) of Volume 7.

I-572-002

Why do we have to dredge the coral reef when the aircraft carriers can come in and just be pulled out without any trouble, without dredging and destroy our reefs. They took hundreds of years to develop, and in just a week or so, our islands only barrier against tsunamis and flooding of the shores nearby. I feel that it is unnecessary for such a factor to happen. What so hard to just be pulled out by tugboat? It would take more money to repair from tsunamis than to pull out an aircraft carrier. People will lose their homes, businesses will be loss, and lands would be destroyed, making the economy for guam a whole lot worse. I am standing by this all the way!

**I-572-001**

Thank you for your comment. Chapters 1 and 2 of Volume 4 provide detailed informatiion as to the pupose and need behind the transient CVN berth. The Navy plans to have six operationally available and sustainable aircraft carriers in the Pacific Fleet AOR, with the majority deployed in the Western Pacific and Indian Oceans, including the referenced transient carrier. To maximize operational availability, the carriers would remain deployed for longer periods of time and utilize the proposed wharf for unscheduled repairs. This can only be accomplished if the carrier docks in Apra Harbor for crew changes, logistics support, and crew recreation. Kilo wharf is not able to meet the requirements of a transient CVN berth. The preferred location of the new berth at Polaris Point will require dredging. In addition there is no correlation between the dredging in Apra Harbor and increased chance of a Tsunami reaching the island or greater damage from a typhoon.

**I-572-002**

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to work to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam.

The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the Draft EIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the Draft EIS and will continue these discussions with agencies

through the completion of the Final EIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed Draft EIS in late July 2009. The DoD has also met with elected officials and community leaders.

I-573-001

Our aquifer is very important to our island. Yes, it can sustain the amount of people coming from the military, but what about the rest of the island? Our aquifer would burst and salt deposits would enter in the water that we use everyday. And if salt deposits do enter, our water would to be boiled to able to use in cooking. That means the power bill would rise for all the amount of gas containers, and electric stoves being used just to have decent water to shower in. Saipan had suffered, and I have heard that from this, when people shower, there are no bubbles from the soap and shampoo. I like my water the way it is. And I hope it stays that way!

#### I-573-001

Thank you for your comment. DoD agrees with you that the aquifer is important for all of Guam and must be carefully managed. That is why DoD has initiated discussions with Guam Waterworks Authority and GEPA to form an aquifer management team. The proposed DoD expansion would increase water extraction from the aquifer. The sustainable yield study done in 1991 estimates the sustainable yield at about 80 million gallons per day. A recent report by the Water and Environmental Research Institute of the University of Guam confirmed that the assumptions made in that 1991 study remain valid today. Yes, some of the current GWA wells are showing increases in salinity. It is felt the cause of this is overpumping of individual wells. The issues facing GWA are that they have an inadequate number of extraction wells and the ones they have are not adjustable for pumping rate; they are either on or off. Additional wells with adjustable flow pumps would allow a better management of the aquifer.

Boil water orders do not occur due to elevated salinity. In fact, boiling makes salinity worse since water is boiled off leaving a higher percentage of residue (other items that do not boil off, such as salt). Boil water orders are issued due to reduced water pressure in the supply lines which could allow infiltration of other water that could be contaminated with germs or parasites. The boiling kills the germs and parasites.

I-574-001

Volume 2, Chapter 6, Page 30

"No aviation training would occur at non-DoD lands and therefore no noise impacts would occur. "  
Comment: Untrue. I live within the path of the Guam Airport and my land is considered "outside the boundaries" according to the FAA's sound solutions project. However, to this day Military planes do fly over the area and are far more louder than the commercial planes. There IS an impact. And it should be considered significant.

**Recommendation:**

Houses within both military and non-military flight paths and beyond should all be sound-proofed. If the FAA has taken measures to do something, then the military should share the expense and help to further sound-proof homes that they have yet to cover.

### I-574-001

Thank you for your comment. No aviation training is proposed for the northern portion of Guam except for at Andersen AFB and Northwest Field (NWF). Training over non-DoD lands are not planned by the USMC. Currently, the USMC is not proposing to soundproof homes as a result of their action. Soundproofing by the USMC in high noise areas is not planned at this time because of several factors. Each individual structure has noise reduction capabilities and the average reduction for windows closed is about 25 dBA and 15 dBA with windows open (personal communication, Czech 2010). The amount of reduction for a specific structure depends upon many factors including; source and intensity of the noise, age of the structure, quality of construction, type and quality of building materials, topography, other structures nearby, and the proximity of trees around the structure.

"I request an extension of time of the public commenting period. According to 40 CFR § 1502.7, an EIS should typically be between 150 and 300 pages. I do not believe that the 45 day commenting period required by 40 CFR § 1506.10(c), nor the 90 day commenting period Guam has been given, is reasonable considering the magnitude of the DEIS document itself and the possible impact on the residents of Guam".

I-575-001

### I-575-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 444

Received: 2/11/2010 10:11:00 PM

I-576-001

I am very against the military buildup and relocation to the island of Guam. I do not agree with the relocation of thousands marines to the island of Guam. Having a nuclear carrier ship on island will not be beneficial to the island, who wants to vacation in a place where a nuclear ship will be housed? Do you think the Japanese tourist will come to Guam for vacation knowing the very Marines that they've been trying to relocate from Okinawa are NOW stationed on Guam, NO!

I-576-002

I also believe that dredging the apra harbor will not be beneficial to the preservation of coral life and fish in that area. Only certain species of fish live in apra harbor and taking that away will erase them from the island. I do not believe the alternatives given are sufficient. I think that no action should be taken on the dredging until better alternatives/solutions are presented.

I-576-003

Guam is a beautiful tropical paradise. The infrastructure on Guam cannot sustain 80,000 more people.

#### I-576-001

Thank you for your comment. Please see the Socioeconomic Impact Assessment Study (SIAS - Appendix F of the EIS) for information on the economic impacts of the proposed action. The economic impacts of the proposed action are expected to be positive in general and for the majority of Guam's population. For information on the expected impacts the proposed action would have on Tourism, please see Section 4.3.7 of the SIAS.

#### I-576-002

Thank you for your comment. The EIS acknowledges there would be impacts associated with the proposed construction of a new deep-draft wharf in Apra Harbor to accommodate a transient nuclear powered aircraft carrier. There are no other harbors in Guam, aside from Apra Harbor, capable of supporting Naval vessels for the proposed action as described in Chapter 2 of Volume 4 of the EIS. The DoD looked at several different potential wharf site locations, channel alignments, and turning basin options within Apra Harbor and used selection criteria to determine potential sites that would be both feasible and that would avoid/minimize environmental impacts to the extent practicable. The location of the new Navy wharf was chosen over as the least environmentally damaging alternative, in efforts to avoid the least amount of live coral in the area. The proposed area to be dredged is mainly a sand and rubble zone and was previously dredged 60 years ago. Based on analysis provided in the EIS, impacts to subsistence fishing/collecting from the proposed action would be minimal; returning to baseline conditions after construction is complete. Since the new wharf is located in a relatively devoid area, the proposed construction would provide increased surface area for invertebrates to attach and potential shelter and forage habitat for juvenile fish. The Navy will implement mitigation measures and Best Management Practices during in-water activities (i.e. dredging, wharf construction) to help lessen impacts to the marine environment. The U.S. Army Corps of Engineers permits will

likely contain requirements for silt curtains, biological monitoring, restrictions in dredging activities during potential coral spawning months, and compensatory mitigation projects. To compensate for the loss in ecological service provided by coral reef ecosystem, upland reforestation (to improve nearshore water quality), artificial reefs (to provide increased fish habitat) or a combination, these and other compensatory mitigation alternatives will be considered by the Navy to comply with federal laws that protect coral resources. Additionally, the DoD, as part of the "build-up" on Guam, will participate in the proposed upgrade to the Northern District Waste Water Treatment Plant from Primary to Secondary Treatment. This action alone will assist GWA in meeting its coastal water quality standards, providing benefit to the sea life and people of Guam.

**I-576-003**

Thank you for your comment.

I-577-001

What effect will the disposal of dredged material from Apra Harbor at the proposed ODMDS locations have on the newly created Marianas Trench National Marine Monument? What permits are required for open water disposal of potentially hazardous dredged material into or near a national marine monument?

Vol. 9, Apx. D, Pg. 17 #1.3.2 - The ODMDS would be located greater than 9 nm from the west coast of Apra Harbor (Figure D-1) (USEPA 2009).

#### I-577-001

Thank you for your comment. The U.S. Environmental Protection Agency (USEPA) is pursuing the designation of an ODMDS approximately 11 to 14 nm (20 to 26 km) from the west coast of Apra Harbor. An ODMDS EIS is being prepared concurrent with this EIS. Ocean disposal is regulated under Title 1 of the Marine Protection, Research, and Sanctuaries Act (33 USC 1401 et seq.) Formal designation of an ODMDS does not constitute approval of dredged material for ocean disposal.

Results from additional analysis and testing would be required to develop a dredged material management plan and the USACE Section 404/10/103 permit application. Ocean disposal is only allowed when USEPA and USACE determine that the project dredged material: 1) is environmentally suitable according to testing criteria, as determined from the results of physical, chemical, and bioassay/ bioaccumulation testing that is briefly described in Section 2.7 (USEPA and USACE 1991); 2) does not have a viable beneficial reuse; and 3) there are no practical land placement options available. Should dredged material be deemed unsuitable for ocean disposal, it would have to be disposed of in an upland placement site on land.

January 20, 2010

JGPO  
C/o NAVFAC Pacific  
258 Makalapa Drive Suite 100  
Pearl Harbor, HI 96860-3134

Attention: GMPO

Gentlemen:

I-579-001

I am one of the attendee on the Public Hearing held on Friday, January 15, 2010 at Pedro P. Tenorio Multi-Purpose Center in Susupe Village, Saipan. First of all, I want to extend my sincere appreciation to the members of the arm forces for taking their time to visit our beautiful islands and to let the local people participate in this very important development to relocate approximately 8,600 Marines and their 9,000 dependents from Okinawa, Japan to Guam.

I mentioned on the meeting that the U. S. Military must clean the waste, such as chemicals from PCV, chemicals from fuel farm, debris from corroded fuel tanks, and other existing debris from the military activities during World War II. This will provide the military good Public Relations to the people of the Commonwealth of the Northern Mariana Islands.

In addition, I mentioned that since the military build-up is in Guam, the military will demand more electricity for buildings, homes and other facilities. Instead of investing in power plant that is run with diesel oil, the military should seriously look in investing money in green energy, free energy by utilizing the thermo energy from the active volcano on Pagan Island. Connect the thermo energy to Guam, by connecting energy outlets to Saipan, Tinian and Rota to provide sufficient energy requirements for the Military and to the people of Guam. The investment of the Military on this thermo energy will not only benefit the Military but the entire population of the Mariana Islands.

## I-579-001

Thank you for your comment. Topics such as war experiences, war reparations, and veterans benefits are important issues but are not part of the proposed action. Comments related to these issues were numerous and indicate underlying social and political dissatisfaction with a broader range of federal-territorial relations outside the scope of DoD legal authority. The various EIS public engagement forums provided an indirect avenue for informing local and federal policy-makers of issues that are important to a significant segment of the community. The DoD is committed to the protection and responsible stewardship of the environment. In addition, the DoD is committed to the safe handling and use of all hazardous substances, including fuels, lubricants, solvents, munitions and explosives of concern (MEC), nuclear materials, pesticides, herbicides, PCBs, and other hazardous substances. In fact, when feasible, the DoD attempts to reduce or eliminate the use of various hazardous substances to the greatest extent possible and substituting them for less toxic substances. Volume 6, Section 2.1 evaluates a number of alternative energy sources, but not geothermal energy from Pagan is not mentioned. It was considered in the power utility study prepared to support the EIS. There was very little baseline information on the feasibility, except for a 1975 document. An engineering study would require 2-3 years of evaluation to determine feasibility and there would be an additional 3 or more years to develop the resource. Geothermal wells would require an EIS and potentially impact the groundwater lens due to drilling required to access the geothermal resource. For these reasons, it was not evaluated in the EIS. No argument regarding benefit of geothermal, question existence based on limited documents available when we looked for them and ability to get to resource if it requires significant drilling into or through the water resources in Guam. We would have looked further if there were any resources identified in the literature researched during the study.

Fossil fuel and its by-products are pollutants and health hazard to human, animals, plants and our environment. With the direction of the federal government under the leadership of President Barrack Obama, green energy is a top priority of his administration. Millions of Dollars have been appropriated to address green energy, for cars, houses, electricity, food, etc., President Obama is leading the charge to address green and reliable energy sources. If the Military utilizes the thermo energy from Pagan Island successfully, the people of Marianas will have cheap and dependable energy source. The military does not have to rely on the unpredictable sources and fluctuation of prices for fossil fuel.

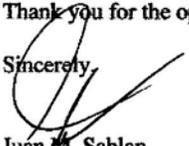

For your information, Governor Benigno Fitial proposed to use thermo energy for electricity from Pagan Island since he came into office four years ago. His plan is to provide cheap and reliable energy for the island of Saipan. But, the real challenge is the cost of harnessing thermal energy from volcano and transmitting it to Saipan. It is beyond the financial capability of the CNMI government to make this project feasible.

Please consider the above recommendations seriously because it is good for the Military and very good for the people of Marianas.

I do not have any concern regarding the Environmental Impact Statement prepared for the CNMI. I know and I have faith in the U.S. Military in mitigating the negative Environmental Impact on Guam and the CNMI. If military makes honest mistake, the military will correct its mistake and will provide compensation to whatever collateral damages to the private owner or to the government.

Thank you for the opportunity to participate on the public hearing.

Sincerely,

Juan M. Sablan

cc: Honorable Governor Benigno R. Fitial  
Honorable Lt. Governor Eloy S. Inos  
Congressman Gregorio Kilili Camacho Sablan  
Senate President, Paul A. Manglona  
Speaker of the House, Froilan C. Tenorio

**COMMENT SHEET**

**Environmental Impact Statement and Overseas  
Environmental Impact Statement  
Guam and CNMI Military Relocation**

Website Comment Number: 447

Received: 2/12/2010 12:15:56 AM

Volume 2, Chapter 19, Page 16

**I-580-001**

The proposed action that the federal government wants to acquire private lands near Andersen South is SO WRONG. After world war II, the federal government took 27 hectares of farm land (P15.18 municipality of Dededo) near Andersen South from my grandfather (Geronimo Dela Rosa Mesa) with the understanding that the federal government would give it back if they did not need it. One would think that after 65 years of the land being dormant, that the federal government really does not need the property and should give the property back to my grandfather's heirs. The same land grabbing by the federal government is going to happen again on Guam. Why don't the federal government use land they already have on base to construct their firing range. The federal government claims that they have to protect the endangered species at Andersen rather than use the land for firing range but they have just the opposite attitude when it comes to destroying the coral reef and other endangered species at Apra Harbor so they can bring in their big ships.

**I-580-002**

**I-580-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

DoD was required to determine whether military relocation requirements could be met by excess, underutilized or otherwise available property held by DoD on Guam. Early development plans attempted to keep all activities on existing DoD lands. However, as discussed in the FEIS (Volume 2, Chapter 2), after applying operational and environmental screening criteria, no contiguous DoD area on Guam was identified that could support all the land use and operational requirements of the action.

Should DoD determine that additional land is necessary to meet its requirements, DoD policy requires that it negotiate with affected public and private land owners in good faith, seek agreements to acquire desired lands interests and pay fair market value. Where circumstances exist that require resolution of issues such as ownership or value, procedures exist under eminent domain authority to resolve those questions. Eminent domain requires reimbursement at fair market value.

**I-580-002**

Thank you for your comment. Under the Endangered Species Act, the Navy is consulting with the USFWS regarding potential impacts on terrestrial species under their jurisdiction (e.g., those species you reference on Andersen AFB). The Navy is also consulting with the National Marine Fisheries Service regarding potential impacts to marine species under their jurisdiction (e.g., threatened and endangered sea turtles within Apra Harbor). There are alternative areas that have been considered for the placement of the proposed firing range on Guam, but

the only location for the proposed CVN and other ships associated with the proposed action is within the existing port at Apra Harbor.

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 453

Received: 2/12/2010 3:05:31 AM

I-582-001

Please accept these comments on the EIS for the U.S. Marine Corps relocation to Guam. I am writing to ask for an extension in public comment review of the EIS. The EIS is over 11,000 pages. 90 days is not enough time to review all the documents, and the online comment form only allows for 2500 characters per comment.

I am pleased that the Navy and Marine Corps policy encourages LEED certification to be pursued for this development and encourage DoD to use LEED - Neighborhood Development and to build projects to achieve LEED Gold certification. Pg. 74 of Vol. 2, Ch. 2 states, "Other sustainability features would be incorporated where appropriate and feasible."

I-582-002

The project should include onsite renewable energy. The current lack of renewable energy in the Guam Power Authority means the facility will be unsustainable. Conventional fossil fuel generation is susceptible to outages, fuel price spikes, and fuel insecurity. Instead of costly upgrades to dilapidated electricity generation systems, the EIS should discuss investment in renewable energy generation (solar, wind).

I urge the EIS to include wind power and solar power onsite. The State of Hawaii has a goal of sourcing 70% of its energy from renewable sources by 2030, and requires 2% of electricity to be generated from biofuel systems starting in 2015. Hawaii's Governor Lingle has proposed a ban on construction of new power plants that burn fossil fuels and a general excise tax rebate on electric and plug-in hybrid vehicles as well as charging stations.

Vol. 2, Ch. 5, and Vol. 9, Appendix I, Section 2.5 discuss greenhouse gas (GHGs) resulting from the project, but conclude there is no significant impact. On the contrary, sea level rise will be felt on Guam over the next few decades, and there should be a section for climate change adaptation, as well as a discussion of how the GHGs resulting from the project could be mitigated over time.

I-582-003

I support the U.S. EPA's denial of a 301(h) variance for the Guam Water Authority (GWA). GWA must meet secondary wastewater treatment standards.

I-582-004

Guam's landfill is discussed in Vol. 7, Ch. 3, pg. 25. Landfill gas (methane) is monitored on a quarterly basis. Methane is a potent greenhouse gas. Please consider the development of recycling and composting infrastructure as well as capturing the methane from the landfill and using it as a source of natural gas to generate electricity or power natural gas vehicles.

### I-582-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

### I-582-002

Thank you for your comment. Renewable energy was considered up front but discarded for base load supply. Base load supply must be much more reliable than renewable energy. Solar energy only works when the sun is shining. Wind only works when the wind is blowing within the acceptable range, and a 40% operational site is considered about as good as it gets for wind energy. These technologies also do not come cheaply. On the mainland, there are mandates currently being met for alternative energy production and many users are experiencing sticker shock due to the high costs and need for duplicate energy production facilities (alternative backed up by conventional). A recent study by Tufts University economics professor Gilbert Metcalf states, "Solar power currently costs 3.5 to 4 times the price of conventional power," but when stripped of subsidies and preferential tax treatment, "solar power is between 570 percent and 887 percent more expensive to produce than coal power." (Reference: IREA "Watts and Volts" newsletter of December 2009).

Although alternative energy sources were not considered viable alternatives for providing baseload power, alternative energy sources may be explored in the future by the Guam Power Authority in consultation with DoD, Guam EPA and EPA Region 9. Currently, geothermal energy (heat energy from the earth) and ocean thermal energy conversion (wave energy) are two options that may prove viable

in the future on Guam.

For the new Marine base, solar orientation and water heating would be considered. This is discussed in the DEIS, but not in the baseload area. Also energy conservation techniques would be incorporated into the new facilities to obtain at least a silver LEED rating. Future alternative energy initiatives would be pursued to meet current and future Executive Orders, laws, and regulations.

The greenhouse gas emissions from the proposed buildup are but a very minor fraction of the entire global production and their elimination would not impact global warming in any discernable amount.

**I-582-003**

Thank you for your comment.

**I-582-004**

Thank you for your comment. DoD does not have authority to dictate what is done at the Gov Guam landfill at Layon. Collecting and using methane gas from the landfill may be economical and worth pursuing, but that is a decision for others.

The Navy is preparing a Recycling and Solid Waste Diversion Study for DoD Bases, Guam that has established a diversion goal of 50 percent, not including construction and demolition debris. The Study is considering the following alternatives: 1) DoD would construct two refuse transfer facilities, one in northern Guam and one in Southern Guam; 2) DoD would implement a source separation recycling program at all facilities; 3) DoD would construct recycling center(s); and 4) DoD would construct a materials resource recovery facility.

Additionally, the Navy is preparing a Construction and Demolition (C&D) Debris Reuse and Diversion Study for DOD Bases, Guam that

addresses waste characterization, processing, recycling and disposal of construction debris. Information from this study will be used to update the FEIS.

The study is considering the following alternatives: 1) Contractors would continue to process all C&D debris, and DoD would construct a composting facility to process green waste and 2) DoD would construct a C&D debris central processing facility and a composting facility to process green waste.

Through project specific contractual requirements, DoD contractors would be required to process and divert 50% of C&D debris that is generated on each project. Another alternative would be for the DoD to construct a central processing facility that would be used to recover and reuse or recycle scrap metal, concrete (without lead-based paint), asphalt concrete, and untreated wood. Contractors would be required to haul C&D to this facility. Based on the C&D debris composition assumed in the study, the Navy will be able to achieve a C&D debris waste diversion goal of greater than 50% by the end of fiscal year 2015. A site for the central processing facility is currently being evaluated but will most likely be located in northern Guam. Disposal of C&D debris that is not divertible or recyclable will be disposed at the Navy Hardfill at Apra Harbor. The study also evaluates the construction of a composting facility to handle green waste generated by land clearing activities required for new development.

## COMMENT SHEET

Website Comment Number: 454

Received: 2/12/2010 4:27:38 AM

I-583-001

I would like the military to be more transparent, all this public meetings that I have attended was only for proper producer. The public made commence but no reply. How do we really know what is going on with this military buildup. In the eis it said small arms but it also mentioned artillery and mortar and missile rounds.

I-583-002

About the night fire there is no mention about mitigation. I don't know if anyone is from Tinian in the eis committee but when it is night is pretty quiet and when you have hundreds of devil dogs firing their rifle that ripple sounds will be a nuisance In my house.

We need more mitigation to be done regarding our tourist and ranchers.

#### I-583-001

Thank you for your comment. The DoD has kept the public informed as required by NEPA, which includes holding public scoping meetings and public hearings and allowing the public to comment on the DEIS. DoD has had ongoing discussions with Cooperating Agencies (those federal and local agencies with special expertise or regulatory oversight) throughout the preparation of the DEIS and will continue these discussions with agencies through the completion of the FEIS. As part of the engagement with Cooperating Agencies, they were asked to conduct an early technical review of the partially completed DEIS in late July 2009. The DoD has also met extensively with elected officials and other community stakeholders on the progress of the EIS and notional/preliminary relocation plans.

All comments and responses are presented in Volume 10 of the Final EIS.

#### I-583-002

Thank you for your comment. Mitigation measures have been updated in the FEIS. A list of proposed mitigation measures is provided Volume 7, Chapter 2.

I-584-001

Please accept these comments on the EIS for the U.S. Marine Corps relocation to Guam. I am writing to ask for an extension in public comment review of the EIS. The EIS is over 11,000 pages. 90 days is not enough time to review all the documents, and the online comment form only allows for 2500 characters per comment.

I am pleased that the Navy and Marine Corps policy encourages LEED certification to be pursued for this development and encourage DoD to use LEED - Neighborhood Development and to build projects to achieve LEED Gold certification. Pg. 74 of Vol. 2, Ch. 2 states, "Other sustainability features would be incorporated where appropriate and feasible."

I-584-002

The project should include onsite renewable energy. The current lack of renewable energy in the Guam Power Authority means the facility will be unsustainable. Conventional fossil fuel generation is susceptible to outages, fuel price spikes, and fuel insecurity. Instead of costly upgrades to dilapidated electricity generation systems, the EIS should discuss investment in renewable energy generation (solar, wind).

I urge the EIS to include wind power and solar power onsite. The State of Hawaii has a goal of sourcing 70% of its energy from renewable sources by 2030, and requires 2% of electricity to be generated from biofuel systems starting in 2015. Hawaii's Governor Lingle has proposed a ban on construction of new power plants that burn fossil fuels and a general excise tax rebate on electric and plug-in hybrid vehicles as well as charging stations.

Vol. 2, Ch. 5, and Vol. 9, Appendix I, Section 2.5 discuss greenhouse gas (GHGs) resulting from the project, but conclude there is no significant impact. On the contrary, sea level rise will be felt on Guam over the next few decades, and there should be a section for climate change adaptation, as well as a discussion of how the GHGs resulting from the project could be mitigated over time.

I support the U.S. EPA's denial of a 301(h) variance for the Guam Water Authority (GWA). GWA must meet secondary wastewater treatment standards.

I-584-003

Guam's landfill is discussed in Vol. 7, Ch. 3, pg. 25. Landfill gas (methane) is monitored on a quarterly basis. Methane is a potent greenhouse gas. Please consider the development of recycling and composting infrastructure as well as capturing the methane from the landfill and using it as a source of natural gas to generate electricity or power natural gas vehicles.

I-584-001

Thank you for your comment. The DoD carefully considered all requests to extend the length of the comment period beyond the 45-day minimum required by NEPA. In evaluating multiple options, DoD leadership determined that a 90-day comment period best balanced the need for sufficient time to review a complex document with the requirement to reach a timely decision regarding the proposed military buildup on Guam.

I-584-002

Thank you for your comment. Renewable energy was considered but dismissed in the EIS for baseload energy generation. Baseload energy supply must be very reliable and uninterruptable. Unfortunately, most renewable energy sources like wind and solar are not reliable enough to be used for baseload.

The best sites for wind energy can generate power roughly 40% of the time. Solar works only when the sun is shining. While these technologies can be used to offset the use of conventional energy sources (hydrocarbons such as oil, coal, or natural gas) or as a supplement on the energy grid, they cannot replace the need for conventional power supply availability and facilities. Nevertheless, DoD does support any efforts that are made in the future to move Guam towards more renewable resources for energy. DoD would be willing to partner with the Guam Power Authority, the Guam EPA and other environmental and energy agencies in efforts to introduce renewable energy sources on the Guam island-wide power grid. The EIS does identify both geothermal energy and Ocean Thermal Energy Conversion as the most promising renewable energy options for Guam. DoD is also evaluating whether solar energy for hot water heaters is an option at the new Marine base. DoD is also pursuing LEED Silver rating for new facilities and would utilize energy conservation techniques. The additional greenhouse gases that would be produced by the proposed

expansion would be a very minor amount in comparison to the global production of these gases.

**I-584-003**

Thank you for your comment. DoD does not have authority to dictate what is done at the Gov Guam landfill at Layon. Collecting and using methane gas from the landfill may be economical and worth pursuing, but that is a decision for others.

The Navy is preparing a Recycling and Solid Waste Diversion Study for DoD Bases, Guam that has established a diversion goal of 50 percent, not including construction and demolition debris. The Study is considering the following alternatives: 1) DoD would construct two refuse transfer facilities, one in northern Guam and one in Southern Guam; 2) DoD would implement a source separation recycling program at all facilities; 3) DoD would construct recycling center(s); and 4) DoD would construct a materials resource recovery facility.

Additionally, the Navy is preparing a Construction and Demolition (C&D) Debris Reuse and Diversion Study for DOD Bases, Guam that addresses waste characterization, processing, recycling and disposal of construction debris. Information from this study will be used to update the FEIS.

The study is considering the following alternatives: 1) Contractors would continue to process all C&D debris, and DoD would construct a composting facility to process green waste and 2) DoD would construct a C&D debris central processing facility and a composting facility to process green waste.

Through project specific contractual requirements, DoD contractors would be required to process and divert 50% of C&D debris that is generated on each project. Another alternative would be for the DoD to

construct a central processing facility that would be used to recover and reuse or recycle scrap metal, concrete (without lead-based paint), asphalt concrete, and untreated wood. Contractors would be required to haul C&D to this facility. Based on the C&D debris composition assumed in the study, the Navy will be able to achieve a C&D debris waste diversion goal of greater than 50% by the end of fiscal year 2015. A site for the central processing facility is currently being evaluated but will most likely be located in northern Guam. Disposal of C&D debris that is not divertible or recyclable will be disposed at the Navy Hardfill at Apra Harbor. The study also evaluates the construction of a composting facility to handle green waste generated by land clearing activities required for new development.

**I-585-001**

Although I do not want to take sides on the military build up there has been a lot of talk about the revenue being brought to Guam. One of my main concerns is that only the bases will see an economic boom while the military takes away our land without any compensation. It was noted in many documentaries that the military took the best land on Guam and no one was compensated for it. Is there anyway that military can also help Guam economically and not just itself? Also since there will be new job opportunities is it possible for the locals that do not have military access to be able to work on base? Also as a future educator will the military be able to employ and provide to the local Gov't education agency? Like I have stated we as locals have to work on the land we give up. Lastly, will and could the military help to preserves Guam's coral reefs, they are a big part in protecting our island from being severely damaged by typhoons.

**I-585-001**

Thank you for your comment. DoD acknowledges that the issue of land acquisition is a complex and sensitive issue, particularly related to prior acquisition of land in Guam by the federal government. Prior land acquisition policies and procedures are not reflective of current land acquisition laws and DoD policy.

The FEIS identifies approximate numbers of civilian employees to be hired by the DoD. Specific hiring procedures, however, are not addressed in the EIS. DoD follows standard Federal hiring procedures to fill DoD civilian positions. Those can be reviewed at [www.opm.gov](http://www.opm.gov). It is possible that those coming to Guam due to the buildup will contribute to the workforce in Guam's school system.

**I-586-001**

Please accept these comments on the EIS for the U.S. Marine Corps relocation to Guam. I am writing to ask for an extension in public comment review of the EIS. The EIS is over 11,000 pages. 90 days is not enough time to review all the documents, and the online comment form only allows for 2500 characters per comment.

I am pleased that the Navy and Marine Corps policy encourages LEED certification to be pursued for this development and encourage DoD to use LEED - Neighborhood Development and to build projects to achieve LEED Gold certification. Pg. 74 of Vol. 2, Ch. 2 states, "Other sustainability features would be incorporated where appropriate and feasible."

**I-586-002**

The project should include onsite renewable energy. The current lack of renewable energy in the Guam Power Authority means the facility will be unsustainable. Conventional fossil fuel generation is susceptible to outages, fuel price spikes, and fuel insecurity. Instead of costly upgrades to dilapidated electricity generation systems, the EIS should discuss investment in renewable energy generation (solar, wind).

I urge the EIS to include wind power and solar power onsite. The State of Hawaii has a goal of sourcing 70% of its energy from renewable sources by 2030, and requires 2% of electricity to be generated from biofuel systems starting in 2015. Hawaii's Governor Lingle has proposed a ban on construction of new power plants that burn fossil fuels and a general excise tax rebate on electric and plug-in hybrid vehicles as well as charging stations.

Vol. 2, Ch. 5, and Vol. 9, Appendix I, Section 2.5 discuss greenhouse gas (GHGs) resulting from the project, but conclude there is no significant impact. On the contrary, sea level rise will be felt on Guam over the next few decades, and there should be a section for climate change adaptation, as well as a discussion of how the GHGs resulting from the project could be mitigated over time.

**I-586-003**

I support the U.S. EPA's denial of a 301(h) variance for the Guam Water Authority (GWA). GWA must meet secondary wastewater treatment standards.

Are you kidding? Military build up in Tinian? Please! First of all, Tinian has NO space for it. Think of the environmental impact it will have. And what economic benefits? Do you think tourist will go to Tinian because of military?...I don't think so! Tourist are looking for peace and quiet. Common sense people! I vote NO to bringing military to our islands. Let Guam deal with it....wait and see.....those so called "Chamorros" from Guam will be taking a flight out to our islands for permanent residency! I have seen the impact of military and believe me...it ain't pretty!

#### I-587-001

Thank you for your comment. DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Tinian, its natural resources and infrastructure. The EIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Tinian.

I-587-001

I-588-001

Do not drill 22 new waters wells up North without consulting the government of Guam as this is our aquifer and our water.

I-588-002

Also, if you were to bring 8,000 Marines and their dependents here to train, bring local Marines back to the island because they will at least have some respect for the culture.

#### I-588-001

Thank you for your comment. DoD has been consulting with Guam Waterworks Authority and Guam EPA on any new wells. In fact, the permits require approvals from both of these entities.

#### I-588-002

Thank you for your comment. Public comments on the Draft EIS are an important part of the decision-making process. This information becomes part of the Final EIS and is evaluated when DoD prepares the Final EIS and issues a Record of Decision at the end of the National Environmental Policy Act (NEPA) process.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

Website Comment Number: 461

Received: 2/12/2010 9:28:12 AM

I-589-001

Why hasn't the military come forward with the true reason the Marines are relocating from Okinawa to Guam?

I've been through many fact finding information and day by day I've become very uncomfortable about why the military is holding back on vital information from the public. In the DEIS report, the word "mitigate" was so commonly used that I am starting to worry about the military's efforts of bringing into consideration the environmental, social, and cultural impacts, because it seems to me that the military did not properly "mitigate" the issues they faced in Okinawa. I am starting think that all the public hearings held and the availability of the DEIS report is just a formality to protect the military from further criticism.

Thank you for your time and have a wonderful day.

#### I-589-001

Thank you for your comment. Sections 1.3 and 1.4 of Volume 1 describe the purpose and need, and the global perspective background for the proposed actions.

DoD recognizes the importance of managing efforts in implementing the proposed military relocation to reduce adverse effects on the people of Guam, its natural resources and infrastructure. The FEIS process identifies ways to implement the proposed relocation while minimizing adverse impacts. DoD will continue to ensure that the short term impacts of construction are managed effectively and that the long term effects of the military relocation reflect DoD policies to be good neighbors and responsible citizens on Guam. Through the process of public involvement that has accompanied this proposed action, the Chamorro people of Guam have voiced clearly and concisely their concern that the traditional Chamorro culture, including dance, language and traditions, will be forgotten. While population increases can highlight cultural differences, they also present unique opportunities for cultural learning and sharing. As noted in the FEIS, the DoD plans for cultural sensitivity orientation and awareness programs will focus on mutual respect and tolerance and strive to educate all incoming and currently present military personnel on the rich and varied cultural history that has created the culture that is Guam today. Finally, the DoD plans to increase military civilian joint activities in order to foster strong and mutually beneficial military civilian relationships that include the sharing and understanding of culture.

I-590-001

I have many concerns and disagreements towards the Draft Environmental Impact Statement. First, I would like to comment by pointing out part of the draft, which is Volume 4, chapter 11, section 11.2.2.2 on page 45. I noticed how the proposed dredging project in Apra Harbor does not include a complete study of how the coral reefs in the area will be impacted. The plan does not mention what the dredging will do to the 25 acres of reef found right next to where the dredging will occur. These corals may be deeper than 60 feet, but these reef areas are very vulnerable to the impacts from dredging. Also, there's an additional 70 acres of reef that may be impacted by the dredging, but which are not included in the plan. DoD must include deeper reef areas (deeper than 60 feet) in the impact analysis. Data is not currently available for these areas, so additional coral reef surveys must be carried out. The results of the complete impact analysis should be provided prior to the release of the Final EIS. I propose that dredging should not occur. There will many bad consequences if any dredging is done. I propose that we do not have these air craft carriers come to Guam's port because we cannot risk the destruction of the homes of millions of living organisms, which include many species of fish, coral, endangered turtles, and sharks. The place where the DoD proposes to dredge is place that will affect the breeding area of many sharks, turtles, and fishes. The idea of dredging is terrible because the DoD plans to remove and destroy millions of living coral. You must know that coral takes hundreds of years to grow. Coral is one of the slowest organisms to settle and grow. You must know also that the coral has been very beneficial to our island. The coral reefs prevent massive tsunamis. So if they destroy all the coral that is left to help us, what will we do? Please do not dredge our waters. There are other alternatives.

## I-590-001

Thank you for your comment. The Navy collected a robust data set to include coral distribution, benthic cover, fish biomass, and fish and invertebrate species abundance. A standard functional assessment technique that accurately characterized and quantifies losses and gains of coral aquatic resource functions, would ideally be used. However, functional assessment methodologies are an evolving science and the adequacies of existing methodologies are heavily debated in the scientific community. Further, the Compensatory Mitigation Rule recognizes the evolving nature of science on this issue and does not mandate any particular assessment methodology. The Navy assessment used a historically approved methodology followed by the USACE and NMFS for quantifying impacts to coral reef ecosystems. For well over 30 years coral reef ecosystem monitoring and impact assessments have been based on percent coral cover. Due to the complexity of this ecosystem percent coral cover has been identified as "the best current available science" standard (or proxy) to attempt capturing the thousands of elements that comprise a coral reef ecosystem.

In light of the continued dispute on what parameters need to be collected to fully capture the impact to coral reefs, the Navy's assessment is currently under review by USACE. Upon completion of that in-depth review, if USACE feels additional information is warranted the Navy will seek additional data and revise its analysis appropriately. The Navy has already overestimated the impacts to the dredged area in depth and laterally. See EIS Section 11.2.2.5. The Navy does not plan to survey deeper than 60 feet. The indirect impacts are addressed in the EIS. There is supporting text and tables assessing indirect impacts, including Figure 11.2-3, which depicts the estimated limits of sediment accumulation exceeding 6 mm for the duration of the dredging project within the Aircraft Carrier Fairway and Berthing Area.

There is no correlation between the proposed dredging in Apra Harbor and increased chance of a Tsunami reaching the island.

So if they destroy all the coral that is left to help us, what will we do? Please do not dredge our waters. There are other alternatives.

## I-591-001

Thank you for your comment. Habitat assessment methodologies that evaluate the function of affected aquatic resources, such as coral reef ecosystems, are an evolving science and the adequacies of existing and new methodologies are heavily debated in the scientific community. Ideally, a standard assessment technique that accurately characterizes and quantifies losses and gains of coral reef ecosystem functions would be used. However, rulemaking for the Compensatory Mitigation Rule recognizes the wide variety of aquatic resources present in the United States and the evolving nature of science regarding aquatic ecosystem restoration make the establishment of standard assessment methodologies impracticable. The assessment for this EIS used an historically approved methodology (percent coral cover), supplemented by other methods such as the use of Light Detection and Ranging (LIDAR) satellite photos, for quantifying impacts to affected coral reef ecosystems impacted by the proposed transient CVN wharf and associated dredging. DoD believes that use of the percent coral cover methodology, supplemented by use of LIDAR satellite photos, is the "best currently available science" to attempt to capture the thousands of elements that comprise the function of a coral reef ecosystem. DoD's assessment is currently under review by the US Army Corps of Engineers, the agency charged with implementing dredge and fill permits under CWA Section 404, and other Federal agencies. The FEIS will be updated to reflect the latest developments in this review.

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed

restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

So if they destroy all the coral that is left to help us, what will we do? Please do not dredge our waters. There are other alternatives. I believe that we are fine with how our port is now. We do not need to host air craft carriers. If the U.S. has been doing well with hosting other air craft carriers then we must go on as the way we were and make things better in a positive and economical way. I can not let DoD take over as it is planned in the DEIS. There are many smart leaders in the U.S. and so they must be more optimistic and find other reasonable and environment-friendly alternatives to this plan. It is not right to our people, our land, and our waters.

I-592-002

**I-592-001**

Thank you for your comment. Habitat assessment methodologies that evaluate the function of affected aquatic resources, such as coral reef ecosystems, are an evolving science and the adequacies of existing and new methodologies are heavily debated in the scientific community. Ideally, a standard assessment technique that accurately characterizes and quantifies losses and gains of coral reef ecosystem functions would be used. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

**I-592-002**

Thank you for your comment. Chapter 1 of Volume 4 outlines the reasons why the proposed action includes a transient aircraft carrier berth on Guam. As described in Chapter 2, Volume 4 of the EIS, the Navy reviewed several alternatives for wharf location, wharf alignment, turning basin location/radius, and channel alignment. After careful review of the alternatives based on selection criteria including practicability and minimizing environmental impacts to the extent practicable, Polaris Point and the Former SRF were the only two locations that met the selection criteria as described in Section 2.3.1 of the EIS. The DoD undertook several measures to avoid environmental impacts, including choosing a channel alignment that avoided dredging of coral shoals, reducing the aircraft carrier turning basin radius, and choosing a parallel to shore wharf alignment with a reduced clearance for the aircraft carrier.

The EIS acknowledges there would be impacts associated with the proposed construction of a new deep-draft wharf in Apra Harbor to accommodate a transient nuclear powered aircraft carrier. Dredging is required to provide the minimum depth requirements to safely navigate the aircraft carrier. Best management practices, such as the use of silt curtains and operational dredging controls, and proposed mitigation measures, as described in Chapter 11 of Volume 4, would reduce and mitigate impacts from dredging.

Coral is one of the slowest organisms to settle and grow. You must know also that the coral has been very beneficial to our island. The coral reefs prevent massive tsunamis. So if they destroy all the coral that is left to help us, what will we do? Please do not dredge our waters. There are other alternatives. I believe that we are fine with how our port is now. We do not need to host air craft carriers. If the U.S. has been doing well with hosting other air craft carriers then we must go on as the way we were and make things better in a positive and economical way. I can not let DoD take over as it is planned in the DEIS. There are many smart leaders in the U.S. and so they must be more optimistic and find other reasonable and environment-friendly alternatives to this plan. It is not right to our people, our land, and our waters. You must not approve of this

Thank you for your comment. Habitat assessment methodologies that evaluate the function of affected aquatic resources, such as coral reef ecosystems, are an evolving science and the adequacies of existing and new methodologies are heavily debated in the scientific community. Ideally, a standard assessment technique that accurately characterizes and quantifies losses and gains of coral reef ecosystem functions would be used. However, rulemaking for the Compensatory Mitigation Rule recognizes the wide variety of aquatic resources present in the United States and the evolving nature of science regarding aquatic ecosystem restoration make the establishment of standard assessment methodologies impracticable. The assessment for this EIS used an historically approved methodology (percent coral cover), supplemented by other methods such as the use of Light Detection and Ranging (LIDAR) satellite photos, for quantifying impacts to affected coral reef ecosystems impacted by the proposed transient CVN wharf and associated dredging. DoD believes that use of the percent coral cover methodology, supplemented by use of LIDAR satellite photos, is the "best currently available science" to attempt to capture the thousands of elements that comprise the function of a coral reef ecosystem. DoD's assessment is currently under review by the US Army Corps of Engineers, the agency charged with implementing dredge and fill permits under CWA Section 404, and other Federal agencies. The FEIS will be updated to reflect the latest developments in this review.

A detailed compensatory mitigation plan would be submitted as part of the Clean Water Act 404 permit application for construction affecting the navigable waters of the United States (including the CVN transient wharf). Due to the ongoing review of DoD's habitat assessment methodology for coral reef ecosystems and associated uncertainties regarding the scope of mitigation required, a detailed mitigation plan has not been developed nor will one be available for incorporation into the FEIS. However, a number of mitigation options, including watershed

restoration and the use of artificial reefs, are discussed in programmatic nature in Volume 4, Section 11.2 of the FEIS. DoD recognizes that, as part of the CWA Sec. 404 permitting process, additional NEPA documentation may be required to address specific permitting requirements and implementation of required compensatory mitigations.

Thank you for your comment. Chapter 1 of Volume 4 outlines the reasons why the proposed action includes a transient aircraft carrier berth on Guam. As described in Chapter 2, Volume 4 of the EIS, the Navy reviewed several alternatives for wharf location, wharf alignment, turning basin location/radius, and channel alignment. After careful review of the alternatives based on selection criteria including practicability and minimizing environmental impacts to the extent practicable, Polaris Point and the Former SRF were the only two locations that met the selection criteria as described in Section 2.3.1 of the EIS. The DoD undertook several measures to avoid environmental impacts, including choosing a channel alignment that avoided dredging of coral shoals, reducing the aircraft carrier turning basin radius, and choosing a parallel to shore wharf alignment with a reduced clearance for the aircraft carrier.

The EIS acknowledges there would be impacts associated with the proposed construction of a new deep-draft wharf in Apra Harbor to accommodate a transient nuclear powered aircraft carrier. Dredging is required to provide the minimum depth requirements to safely navigate the aircraft carrier. Best management practices, such as the use of silt curtains and operational dredging controls, and proposed mitigation measures, as described in Chapter 11 of Volume 4, would reduce and mitigate impacts from dredging.

## COMMENT SHEET

### Environmental Impact Statement and Overseas Environmental Impact Statement Guam and CNMI Military Relocation

I have many concerns and disagreements towards the Draft Environmental Impact Statement. First, I would like to comment by pointing out part of the draft, which is Volume 4, chapter 11, section 11.2.2.2 on page 45. I noticed how the proposed dredging project in Apra Harbor does not include a complete study of how the coral reefs in the area will be impacted. The plan does not mention what the dredging will do to the 25 acres of reef found right next to where the dredging will occur. These corals may be deeper than 60 feet, but these reef areas are very vulnerable to the impacts from dredging. Also, there's an additional 70 acres of reef that may be impacted by the dredging, but which are not included in the plan. DoD must include deeper reef areas (deeper than 60 feet) in the impact analysis. Data is not currently available for these areas, so additional coral reef surveys must be carried out. The results of the complete impact analysis should be provided prior to the release of the Final EIS. I propose that dredging should not occur. There will many bad consequences if any dredging is done. I propose that we do not have these air craft carriers come to Guam's port because we cannot risk the destruction of the homes of millions of living organisms, which include many species of fish, coral, endangered turtles, and sharks. The place where the DoD proposes to dredge is place that will affect the breeding area of many sharks, turtles, and fishes. The idea of dredging is terrible because the DoD plans to remove and destroy millions of living coral. You must know that coral takes hundreds of years to grow. Coral is one of the slowest organisms to settle and grow. You must know also that the coral has been very beneficial to our island. The coral reefs prevent massive tsunamis. So if they destroy all the coral that is left to help us, what will we do? Please do not dredge our waters. There are other alternatives. I believe that we are fine with how our port is now. We do not need to host air craft carriers. If the U.S. has been doing well with hosting other air craft carriers then we must go on as the way we were and make things better in a positive and economical way. I can not let DoD take over as it is planned in the DEIS. There are many smart leaders in the U.S. and so they must be more optimistic and find other reasonable and environment-friendly alternatives to this plan.
